PAXTON'S
BOTANICAL DICTIONARY

COMPRISING THE

NAMES, HISTORY, AND CULTURE OF ALL PLANTS
KNOWN IN BRITAIN;

With a full Explanation of Technical Terms.

NEW EDITION

INCLUDING ALL THE NEW PLANTS UP TO THE PRESENT YEAR.

REVISED AND CORRECTED

BY SAMUEL HEREMAN,

SECRETARY FOR NEARLY FORTY YEARS TO THE LATE SIR JOSEPH PAXTON.

LONDON:
BRADBURY, EVANS, & CO., BOUVERIE STREET, E.C.
1868.

LONDON :

BRADBURY, EVANS, AND CO., PRINTERS, WHITEFRIARS.

PREFACE.

THE Editor of the present edition wishes to add to what is stated in the original Preface as to the objects, purpose, and usefulness of the BOTANICAL DICTIONARY, that the rapid and extensive sale of all former issues has confirmed the opinion expressed by the originator of the work, that his little volume just met the wants and wishes of the botanical and horticultural world.

It was on this account that the late Sir Joseph Paxton contemplated the publication of a revised edition, and although prevented by illness from completing his intention, he was yet able to plan and arrange the whole, and to examine the earlier portion of the printed matter, as it issued from the press; and before his death, to entrust the completion of the work to the present writer, who, for nearly forty years, had laboured under his direction in most of his literary undertakings.

The alterations and additions to the present edition are numerous and important; to the abbreviations is added another column, denoting the average height to which the species attain in their native countries, and under ordinary cultivation.

The names of the natural orders throughout the work have undergone an entire revision; and such alterations have been made as appeared consonant with the present advanced state of botanical knowledge: in this respect, the arrangement of Dr. Lindley, in his Vegetable Kingdom, has been principally followed, as being perhaps better known than any other in this country; and certainly appreciated, if not adopted, in every land where botany is cultivated and esteemed.

Cray Collection.

12

The form of accentuation has also been changed and rendered as simple as possible, the sounds being indicated by a single mark instead of the long and short accents of the former editions. The grave accent (̀) shows that the vowel over which it is placed should be sounded long, as *Fàgus*, *Jambòsa*; and the acute accent (´) that the sound should be short, as *Hòlcus*, *Játropha*; in some instances, however, the classical accentuation has been made to yield to the popular pronunciation, of which an instance or two may be quoted. *Lycopódium* (*classical*), *Lycopòdium* (*popular*); *Chenopódium* (*classical*), *Chenopòdium* (*popular*). The grave accent (̀), then, indicates that the vowel over which it is placed is to be sounded by itself, while the acute accent (´) denotes that the vowel is to be sounded in conjunction with the following consonant.

The Editor has to acknowledge the courtesy of those botanists who have kindly furnished him with information on various points, and especially he would mention the valuable assistance rendered by Dr. Masters, who kindly undertook to look over the proof-sheets before they finally went to press.

In conclusion, the Editor hopes that the present edition of the BOTANICAL DICTIONARY will be as favourably received by the public as any of the preceding issues; great care having been bestowed upon its revision, and much new and useful matter added, including the names of several thousands of new plants, which have been introduced into this country during the last twenty years.

CHATSWORTH,

May, 1868.

PREFACE TO THE FIRST EDITION.

WHEN an author offers to the public a work, the greater part of the information contained in which is already available in detached fragments or other forms, his first duty is to exhibit the propriety of its publication ; and prove, beyond question, that he has been instigated to his task by no unworthy desire of fame, but by a distinct and certified persuasion of its demand and utility.

Happily, in the present case, we are enabled to court scrutiny into our motives, being fully prepared to explain and justify them. During the numerous interviews enjoyed by us with the leading patrons of floriculture, the want of a pocket companion, such as that now furnished, has ever been especially and forcibly urged. There are, it is true, Catalogues, Encyclopædias, Lexicons, and Cultural Directories, all highly valuable in their respective spheres, and essential adjuncts to a gardener's or amateur's library : but they are too elaborate, verbose, technical, or uninteresting, to be readily and thoroughly appropriated ; the expense, also, of several is necessarily enormous, and beyond the means of the great majority of those who thirst after botanical and floricultural literature ; and no single one, much less a set, embracing all the subjects of this Dictionary, is conveniently portable, or can ever be carried, without discomfort, beyond the porch of the proprietor's domicile.

Comprehensive compendiums, in which scientific and popular details are abridged, combined, and thus brought within the pecuniary reach as well as easy examination of those whose income and time are subjected to many other more pressing exactions, are highly commendable if attentively and clearly arranged ; but their usefulness is in proportion to the precision and accuracy of the manner in which they are compiled.

THE POCKET BOTANICAL DICTIONARY, then, has been prepared solely as an instant resource and standard of consultation ; and for this purpose will be found invaluable to the professors and lovers of horticulture, in all its branches and of every grade. Within its columns is compressed all the most important information relative to admired plants which its small size and avowed design would admit. With this in his pocket, the possessor or cultivator of plants may perambulate his own garden, visit those of his friends or public establishments, and attend floricultural exhibitions, in the full assurance that if any particular object engage his attention, he may at once derive every fact of interest respecting both it and its congeners which is yet known in this country, and form an idea of the facility or difficulty, and consequent expense, attending its conservation. Such is, cursorily, the prime purport of this publication, and the aim of its author. To supersede the necessity for

attaching the meaning of every specific appellation, and at the same time to afford the most ample means for acquiring a knowledge of all the phrases peculiar to the science, a voluminous glossary has been incorporated; wherein, in addition to the more abstruse Latin terms, a number of ordinary words that are used botanically in a peculiar sense are fully explained.

One inestimable quality of a popular synopsis of any sort, is the discreet abridgment of uninteresting matter, and detailed record of merely the most attractive particulars. On the judicious selection and proper apportionment of desirable intelligence, the value of a summary entirely rests. In this respect we have much to claim for the volume to which the present address is prefixed. On account of the extreme scarcity, or non-existence in Britain, of many plants, considerable perplexity has been experienced in assigning to each species its due share of honour. For this reason, if a few plants are unjustly elevated, and others improperly debased, some little allowance may fairly be expected. Those indigenous species which are ranked with the ornamental sorts, are not to be regarded as worthless because of their commonness, but may be cultivated with advantage in the more secluded and sylvan flower borders.

To take a general glance at the arrangement and composition of this **DICTIONARY**, it will be better to show more lucidly the intent and application of each separate point, and afterwards advert to the abbreviations. Compactness and facile portability being the primary and principal elements of the design, condensation of the letter-press was an inevitable result. On this score, however, we have just grounds for eulogising our printers, as nothing can be more beautiful or perfect than the mechanical execution of the work; while the objection that might attach to the minuteness of the type, is completely removed by its exceeding clearness.

Under the head of each genus, besides the authority for its name, its origin, and position, both in the Linnæan and Natural System, a concise outline is given of its most striking members, with adequate instructions for their cultivation, and observations on their particular medicinal or useful properties. In conformity to the principle of giving prominence to only the most interesting subjects, the worthless genera are passed over with a slight statement of their insignificance; and to prevent repetition, reference is occasionally made to other genera for directions on treatment, when the habits of both closely correspond. For all the suggestions on culture, we hold ourselves, for the most part, responsible; the notes in those instances where we have no personal cognizance being extracted from the best authors, with the usual acknowledgments. Immediately succeeding the above-named sketches, a list of specific synonymes is furnished, with figures of allusion affixed to each, and similar ones to the species they represent, by which the observer may instantly perceive what names are applied to the same plant, that in the last or descriptive text being always the most authentic.

In the enumeration of genera and species, we are indebted chiefly to Mr. Geo. Don's *General System of Gardening and Botany*, Dr. Lindley's *Introduction to the Natural System*, and Mr. Loudon's *Arboretum et Fruticetum Britannicum*, comparing these with all other catalogues extant,—of which Loudon's *Hortus Britannicus* is the principal and best,—and adopting such readings as are most obviously correct. We rely greatly on our own rigid research into these matters, having been engaged

in it for several years, but still more so on a careful revision of both MSS. and printed proofs, undertaken by Dr. Lindley in the most disinterested and kind manner. Nevertheless, such is the typographical diminutiveness, that we cannot imagine but some errors have eluded us. Should it reach another edition, we shall have great pleasure in effecting any emendations which our correspondents or friends may discover and communicate. It will be manifest that two distinct courses have been followed with regard to the ornamental and trivial species. Possessing nothing to recommend them to notice, or to render the enrolment of their habits, native country, &c., at all desirable, we have arranged the latter in aggregated groups; after their more interesting allies where these exist, and directly following the general remarks on those genera which comprise no ornamental species. On the description of each meritorious plant included in the columns opposite its appellation, we shall descant more largely, when considering the abbreviations.

Respecting the number of scientific terms herein explained, we may be allowed to say that no other popular glossary contains such a copious collection. Their explication is in exact accordance with the views of the most learned botanists, merely being reduced to dimensions which best comport with simplicity and conciseness.

Considering the immense field which this volume occupies, the accentuation of generic, specific, and all purely botanical names that are not Anglicised, must be regarded as a highly valuable characteristic. By the extreme perspicuity of the marks employed, their full and universal adaptation, and the fact that they were all supplied by the first botanist in England, (Dr. Lindley,) the botanic student or other assiduous examiner will here meet with a fund of accurate instruction in this particular, to which only the most laboured and extremely expensive publication can at all pretend.

It might be assumed that the signs used are sufficiently common to require no comment; but, for the benefit of the less informed, we shall just show the manner in which they apply. In the first place, the vowel in each word over which the primary accent occurs, sustains all the *emphasis* of the syllabic pronunciation, independently of the real nature of the sign. Further, the employment of the long quantity (˘) or the short quantity (˙) simply denotes that the vowel above which they are placed is to be sounded long and broadly, or short and abruptly. To vary our expression, the short vowel is perpetually pronounced in conjunction with the next consonant, and the long one has its own distinct and final sound, as if the letter were doubled, but the voice rested on each. In all cases when the last syllable but one is marked long (˘), the accent falls on that syllable; and when the last syllable but one is marked short (˙), the accent falls on the last syllable but two. Thus Romānus would be accented Romānus, and trīcōlōr would be accented trīcolor, although the i on which the accent is placed is short. It is extremely important to bear this in mind.

To reduce the work to the smallest practicable size, it has been found requisite to abridge the language conveying many of the details, and that this may be rightly comprehended, we shall now enter on its elucidation. First, the numerical figures which follow the recognised specific names in the general list, and such as precede the synonyms, have, as before hinted, a direct connection with each other,

establishing the identity. Thus, in page 1, under the genus ACACIA, the synonyme "1. *A. acicularis*" is but another appellation for "*A. Brownii* 1," in the ensuing text; "2. *Mimosa tortuosa*," is synonymous with "*A. Burmanniana* 2;" and so on, in like manner, throughout the whole. Next, the authorities for the generic names are very often shortened, and a list of all those, with the country in which they rose to celebrity, will be subjoined. Again, the descriptive peculiarities of species are classed in seven columns, in which the colours of the flowers,—the month during which they commonly blossom,—their habitude, whether as concerns the temperature they receive, their duration, or general nature,—their native climate, and the year in which they were first introduced to Britain,—are all duly registered. Where either or several of these circumstances are omitted, it is to be inferred that they have not been accurately ascertained. In the case of Epiphytes, Palms, and Grasses, they are simply noted as such, since their habits are universally the same. All other trifling particulars are regularly and efficiently interpreted in the catalogue of abbreviations.

Having thus specified the objects, classification, and utility of the work, we have only to commend it to the kind indulgence of the public, convinced that, whatever may be its failings—and in such an extensive compilation some defects must naturally be anticipated—they are neither glaring, momentous, nor, notwithstanding the smallness of the type, equal to those of any similar production. To the gardener, and all who cultivate or delight in acquainting themselves with plants, either for enrichment or amusement; but emphatically to such persons as wish to study the nature and history of vegetation in the garden, where alone they can hope these features to be permanently impressed on the memory, the BOTANICAL POCKET DICTIONARY has claims which nothing at present existing or likely to be issued can supplant or diminish.

JOSEPH PAXTON.

CHATSWORTH,

July, 1840.

AUTHORITIES FOR GENERIC TITLES.

- Abel.* A traveller in China, and author of a work on Chinese plants.
- Ach. for Acharius.* A Swedish botanist and student of Lichens.
- Adams, F.* A Russian botanist and traveller in Siberia.
- Adanson.* A French traveller and botanist.
- Afzelius.* A professor in Sweden, and traveller in Sierra Leone.
- Agardh.* A Swedish professor, bishop, and writer on Algae plants.
- Aitbn.* The former manager of the Royal Kew Gardens.
- Albertini.* Author of some dissertations on Fungi.
- Allioni.* A botanist of Italy.
- Ammann.* A Russian botanist.
- Anderson.* A London writer on Pæonies.
- Andr. for Andrews.* An eminent English botanical artist.
- Andrzejowski.* A Russian botanist.
- Ar. for Arduini.* An Italian botanist.
- Aublet.* A Frenchman who travelled in Guiana.
- Balbis.* A French professor of botany.
- Bancroft.* A physician resident in Jamaica.
- Banks.* A celebrated English traveller and promoter of science.
- Bartl. for Bartling.* A botanist of Göttingen.
- Barton.* Once a professor at Philadelphia.
- Bat. for Batard.* A writer on the botany of France.
- Batsch.* A writer on Fungi.
- Bauhin, Caspar.* A German botanist of the sixteenth century.
- Baumgarten.* A botanist of Transylvania.
- Beauvois for Palisot de Beauvois.* A French botanist and traveller in Africa.
- Bell. for Bellardi.* An Italian botanist.
- Benth. for Bentham.* An English botanist, and formerly secretary to the London Horticultural Society.
- Bergius.* A Swede, and writer on Cape plants.
- Berkeley.* An English clergyman and writer on Fungi.
- Bernhardi.* A botanist of Italy.
- Bertoloni.* A writer on Italian plants.
- Resser.* A professor in Russia.
- Bieberstein.* A Russian botanist, and writer upon the plants of Caucasus.
- Pivona.* A Sicilian botanist.
- Blume.* A Dutch botanist and traveller in Java.
- Boerhaave.* A Dutch botanist and physician.
- Böhmer.* A German writer on botany.
- Boiss. for Boissier.* A Swiss botanist.
- Bajer.* A botanist of the Mauritius.
- Bolton.* An English writer on Fungi.
- Bonpland.* A French traveller and botanist.
- Borkhausen.* An examiner of the plants of Hesse Darmstadt.
- Bory for Bory de St. Vincent.* A French botanist and traveller.
- Bosc.* A French botanist.
- Bot. Mag. for Botanical Magazine.* A periodical commenced by Curtis, and afterwards conducted by Sir William Hooker, and at present by Dr. Hooker.
- Bot. Reg. for Botanical Register.* A botanical monthly periodical, commenced by Ker, and afterwards conducted by Dr. Lindley.
- Bot. Rep. for Botanical Repository.* A botanical periodical, formerly conducted by Andrews and others.
- Bouch. for Boucher.* A writer on the French Flora.
- Bridel.* A German author on Mosses.
- Brignoli.* A botanist of Verona.
- Brongniart.* A botanist of France.
- Brady.* An old English writer on Fungi.
- Brotero.* A Portuguese botanist.
- Brouss. for Broussonet.* A French botanist.
- Browne, Patrick.* An Irish botanist and writer on the plants of Jamaica.
- Brown, R.* An English botanist and traveller in New Holland.
- Bulliard.* A Frenchman, and investigator of Fungi.
- Burmamn.* A Dutch writer on botany, and patron of Linnaeus.
- Cesalp. for Cæsolpinus.* An Italian botanist.
- Carmichael.* A Scotch botanist.
- Cassini, H.* A French writer on Composite plants.
- Cavanilles.* A botanist at Madrid.
- Chamisso.* A German traveller and botanist.
- Choisy.* A botanist of Switzerland.
- Clus. for Clusius.* An old French botanist.
- Colebrook.* An English writer on the Flora of India.
- Colladon, J. F.* A botanist of Geneva.
- Commelin.* A botanist of Holland.
- Commerson.* A French traveller and botanist.
- Corda.* A German botanist.
- Correa for Correa de Serra.* A Portuguese botanist, diplomatist, and writer on botanical subjects.
- Cruiter.* An Irish physician and traveller in Mexico.
- Crantz.* An Austrian botanist.
- Cunn. A. for A. Cunningham.* A British collector for the Kew Gardens.
- Cusson.* A Swiss observer of Umbelliferæ.
- Cyrilli.* An Italian botanist.
- Dec. for Decandolle.* Father, son, and grandson, eminent botanists, of Geneva.
- Delile.* A French professor and traveller.
- Desfon. for Desfontaines.* A French traveller and botanist in Algiers.
- Desmazières.* A botanist of France.
- Desvaux.* A French botanist.
- Dickson.* An English examiner of Cryptogamia.
- Dillenius.* A German writer on botany, especially Mosses, settled in England and was gardener to Sherard, at Eltham.
- Dillwyn.* An English investigator of Convolvæ.
- Dittmarr.* A botanist of Holland.
- Dombey.* A French traveller in S. America.
- Don, D.* Formerly librarian to the Linnean Society and botanist.
- Don, G.* An English botanist and traveller.
- Douglas.* A collector of plants in North America for the Horticultural Society of London.
- Dryander.* A Swedish botanist, and long librarian to Sir Joseph Banks.
- Dufr. for Dufresne.* A French writer on Valerians.
- Duh. for Duhamel.* A French physiological botanist.
- Dumont for Dumont Courset.* A French gardening author.
- Dunal.* A French botanist.
- Duroi.* A German writer upon plants.
- Duval.* A French professor of botany.
- E. Botany for English Botany.* A periodical containing coloured figures of British plants by Sowerby, Sir J. E. Smith, and others.
- Ehrhart.* A botanist of Germany.
- Elliöt.* An American botanist who wrote on the plants of Carolina.
- Ellis.* An English writer on marine plants.
- Endlicher.* A German botanist.
- Esper.* A German writer on Fungi.
- Etlinger.* A German writer on Salvia.
- Fenzl.* An Austrian botanist.
- Feuillé.* A French Jesuit who wrote on the plants of Chili.

- Fischer.* A Russian botanist, and director of the Botanical Garden, St. Petersburg.
- Flora Peru.* for *Flora Peruviana.* A work on the plants of Chili and Peru by Ruiz and Pavon, two Spanish botanists.
- Flugge.* A German writer on Grasses.
- Forskahl.* A Danish naturalist who travelled in Arabia.
- Forster.* A traveller in the South Pacific Ocean.
- Fougeroux,* for *Fougeroux de Bondaroxa.* A French botanist of the last century.
- Fries.* A writer on Fungi in Sweden.
- Fratich.* A German writer upon Gentiana.
- Funck.* A German Cryptogamic botanist.
- Gærtner.* A German writer on the structure of fruit and seeds.
- Gaudich.* for *Gaudichaud.* A French botanist and voyager.
- Gill.* for *Gillies.* A Scotch botanist.
- Gingins.* A French botanist.
- Gmelin.* A Russian botanist and traveller in Siberia.
- Græffer.* An English writer on Herbaceous plants.
- Graham, Dr.* Formerly regius Professor of Botany at Edinburgh.
- Greville.* An English author on Cryptogamic botany.
- Gronovius.* A Dutch botanist.
- Haller.* A botanist and physician of Switzerland.
- Hamilton.* A Scotch botanist and Indian traveller, sometimes called Buchanan.
- Harvey.* A writer on Cryptogamic and Cape plants.
- Harworth.* An English writer on succulent plants.
- Heidwig.* A German writer on Cryptogamic plants.
- Henslow.* A Professor of botany at Cambridge.
- Heister.* A German botanist.
- Herbert.* An English writer on Amaryllidaceous plants.
- Hilaire, A. de St.* A French botanist and traveller in Brazil.
- Hill.* An English botanical writer.
- Hoffmann.* A German botanical author.
- Holmskiöld.* A Danish botanist.
- Hooker.* Father and son, distinguished English botanists.
- Hornemann.* A Danish botanist.
- Hort. Kew.* for *Hortus Kewensis.* A catalogue of the plants in the Royal Kew Gardens.
- Host.* An Austrian botanical writer.
- Hudson.* An investigator of British plants.
- Humboldt and Bonpland.* Botanists and travellers in America, &c.
- Jack.* An English writer on the plants of the Indian Archipelago.
- Jackson.* An English botanist.
- Jacq. for Jacquin.* An Austrian botanist.
- Jussieu.* A French systematical botanist.
- Kämpfer.* A traveller in Japan.
- Kalm.* A Swedish pupil of Linnæus who travelled in N. America.
- Kaulfuss.* A German writer upon Ferns.
- Ker.* A describer of plants in Bot. Reg.
- Kitzebel.* A Hungarian botanist.
- Knowles and Westcott.* Editors of the Floral Cabinet.
- Koch.* A professor of botany at Erlangen.
- Koenig.* A German naturalist who travelled in the East Indies.
- Kunth.* A Prussian botanist who assisted in the arrangement and publication of the plants found in America by Humboldt and Bonpland.
- Kunze.* A German writer upon minute Cryptogamic plants.
- Labillard.* for *Labillardière.* A French botanist, and traveller in Syria, New Holland, &c.
- Lagasea.* A botanist of Spain.
- La Llave.* A Mexican botanist.
- Lamarck.* A French naturalist who wrote largely upon botany about the end of the eighteenth century.
- Lambert, A. B.* An English patron of botany.
- Lamouroux.* A French writer upon marine plants.
- La Peyrouse.* A French writer on the plants of the Pyrenees.
- Lazmann.* A German botanical writer.
- Ledebour.* A botanist and traveller.
- Lehmann.* A German botanist, and formerly director of the Botanical Garden of Hamburg.
- L'Herit.* for *L'Héritier.* A French botanist.
- Lindley.* Late Professor of botany in University College, London.
- Link.* A botanist of Prussia.
- Linn.* for *Linnaeus.* The great Swedish naturalist.
- Liz.* for *Lexarza.* A Mexican botanist.
- Loddiges.* Celebrated nurserymen.
- Loesel.* An old Prussian botanist.
- Loefling.* A Swedish traveller and botanist.
- Loiseleur Deslongchamps.* A French botanist.
- Loureiro.* A Portuguese monk who wrote on the plants of Cochinchina.
- Lyngbye.* A Danish writer on submarine Cryptogamic plants.
- Marcgraav.* One of the early naturalists who explored Brazil.
- Martius.* A Bavarian naturalist and traveller in Brazil.
- Mayer.* Several German botanists.
- Medicus.* A German botanist.
- Merat.* A French writer on the flowers of Paris.
- Meyer.* A botanist of Germany.
- Mich.* for *Michaux.* A French botanist who wrote on the plants of North America.
- Micheli.* A Florentine microscopical botanist.
- Mikan.* A German author on the Brazilian Flora.
- Miller.* One of the ablest scientific English garden botanists.
- Mirbel.* A French physiological botanist.
- Moench.* A German systematical botanist.
- Mohring.* A writer on Cryptogamia in Germany.
- Molina.* An Italian naturalist who wrote upon the flowers of Chili.
- Mougeot.* A Cryptogamic botanist.
- Muhlberg.* A North American botanist.
- Murray.* A German botanist.
- Mutis.* A Spanish botanist and correspondent of Linnæus.
- Necker.* A German botanical writer.
- Nees.* A German botanist and professor.
- Noronha.* A Spanish botanist who visited the Philippines.
- Nuttall.* An American traveller and botanist.
- Ortega.* A botanist of Spain.
- Outh.* A French botanical writer.
- Palisot de Beauvois.* A French botanist and traveller in Africa.
- Panzer.* A German botanist.
- Pavon.* One of the authors of the Spanish Flora Peruviana.
- Pax.* for *Sir J. Paxton.* A great lover and promoter of botany.
- Pers.* for *Persoon.* A French botanist.
- Pliny.* An ancient naturalist.
- Plumier.* A French botanist and traveller in the West Indies.
- Pohl.* A botanist of Germany who travelled in Brazil.
- Poiteau.* A French artist and botanist.
- Püppig and Endlicher.* German botanists, the former a traveller in South America.
- Presl.* A German systematical botanist.
- Pursh.* A Prussian gardener who wrote a Flora of North America.
- Raddi.* An Italian Cryptogamic botanist.
- Rafn.* for *Rafinesque.* A North American botanical writer.
- Ramond.* A French botanist who wrote concerning the flowers of the Pyrenees.
- Reich.* for *Reichardt.* A German botanist.
- Reichenbach.* A botanist of Germany.
- Reinwardt.* A botanist of Frankfurt.
- Rets.* A German botanist who wrote on the flowers of Scandinavia.
- Rheede.* A Dutch gentleman under whose orders the Hortus Malabaricus was published.
- Rich.* for *Richard.* A French botanist and traveller in Demerara.
- Rivinus.* A German botanist.
- Robil.* for *Robillard.* A French botanist.

<i>Rochel</i>	Superintendent of the garden at Pesth.	<i>Sonnerat</i>	A French traveller in the East Indies.
<i>Rolander</i>	A botanist of Sweden.	<i>Spach</i>	A French botanist, writer in the <i>Annales des Sciences Naturelles</i> .
<i>Römer and Schultes</i>	German botanists, and editors of the <i>Systema Vegetabilium</i> of Linnæus.	<i>Sparmann</i>	A Swedish traveller at the Cape of Good Hope.
<i>Roscoe</i>	An English botanical author.	<i>Sprengel</i>	A German botanist and antiquary.
<i>Roth</i>	A German writer on botany.	<i>Stackhouse</i>	An English writer on marine plants.
<i>Rottböl.</i>	A Danish botanist.	<i>Sternberg</i>	A noble botanist of Germany.
<i>Rox.</i> for <i>Roxburgh</i> .	A botanist of India, formerly in charge of the botanic garden, Calcutta.	<i>Steven</i>	A Russian botanist.
<i>Royen</i>	A Dutch botanist.	<i>St. Hilaire</i>	A French botanist.
<i>Roye</i>	An Indian Botanist.	<i>Swartz</i>	A Swedish botanist who visited the West Indies, and published an account of the native plants.
<i>Rudge</i>	An English botanical amateur.	<i>Sweet</i>	An English garden botanist.
<i>Rudolph</i>	A German botanist.	<i>Thouars for Du Petit Thouars</i>	A French physiologist and traveller in Madagascar.
<i>Ruis and Pavon</i>	Authors of <i>Flora Peruviana</i> .	<i>Thun.</i> for <i>Thunberg</i>	A Swedish botanist and traveller.
<i>Rumphius</i>	A botanist, author of the <i>Herbarium Amboinense</i> .	<i>Tode</i>	A German author on <i>Fungi</i> .
<i>Salis.</i> for <i>Salisbury</i>	An English botanist.	<i>Tournefort</i>	An ancient French traveller and botanist.
<i>Salm Dyck</i> for the <i>Prince of Salm Dyck</i>	An illustrious German amateur.	<i>Trentepohl</i>	A botanist of Germany.
<i>Savi</i>	A botanist of Italy.	<i>Trinius</i>	A Russian writer on <i>Gramineæ</i> .
<i>Schkahr</i>	A German writer on grasses.	<i>Turpin</i>	A French botanist and draughtsman.
<i>Schlech.</i> for <i>Schlechtendahl</i>	A German botanist.	<i>Turra</i>	A botanist of Italy.
<i>Schmidt</i>	A Bohemian botanist.	<i>Vahl</i>	A Danish botanical author.
<i>Schousb.</i> for <i>Schousboe</i>	A Danish consul at Tangiers, author of a work on Morocco plants.	<i>Vaillant</i>	A French traveller and botanist.
<i>Schrader</i>	A German botanist.	<i>Vandelli</i>	A botanist of Portugal who wrote on the plants of Brazil.
<i>Schrank</i>	A Bavarian botanist.	<i>Vauch.</i> for <i>Vaucher</i>	A Swiss writer on <i>Confervæ</i> .
<i>Schreber</i>	A botanist of Germany.	<i>Vellozo</i>	A Brazilian botanist.
<i>Schultz</i>	A German botanist.	<i>Veneno</i>	A French garden botanist.
<i>Schumacher</i>	A Danish botanist, who described many Sierra Leone plants.	<i>Villars</i>	A botanist of France who wrote on the plants of Dauphiny.
<i>Scopoli</i>	A botanist of Italy who wrote on the flowers of Carniola.	<i>Wahlenberg</i>	A German botanist.
<i>Seringe</i>	A French botanist.	<i>Wallich</i>	Formerly Superintendent of the Calcutta botanic garden.
<i>Sibthorp</i>	An English traveller in Greece, and botanist.	<i>Walter</i>	A writer on the plants of Carolina.
<i>Stms.</i>	An English garden botanist.	<i>Weber</i>	A German Cryptogamic botanist.
<i>Smith, Sir J. E.</i>	An English botanist, founder of the Linnean Society.	<i>Wendland</i>	A German garden botanist.
<i>Solander</i>	A botanist of Sweden who sailed round the world with Banks and Cook.	<i>Willd.</i> for <i>Willdenow</i>	A Prussian botanical writer.
		<i>Zea</i>	A botanist of Spain.
		<i>Zuccarini</i>	A distinguished botanist.

ABBREVIATIONS.

FIRST COLUMN.

COLOURS OF THE FLOWERS.

<i>Apetal</i>	destitute of conspicuous petals.
<i>bh.</i>	blush.
<i>bld.</i>	blood-coloured.
<i>blk.</i>	black or blackish.
<i>blu.</i>	blue or bluish.
<i>brk. old.</i>	brick red.
<i>br. brn.</i>	brown.
<i>brnsh.</i>	brownish.
<i>br. brt.</i>	bright.
<i>carm.</i>	carmine-coloured.
<i>crim.</i>	crimson.
<i>dk. drk.</i>	dark.
<i>gn. gr. grn.</i>	green.
<i>grnsh. gsh.</i>	greenish.
<i>lgt. lt.</i>	light.
<i>li. lil.</i>	lilac-coloured.
<i>or. oran.</i>	orange-coloured.
<i>pa.</i>	pale.
<i>pnk.</i>	pink.
<i>pksh.</i>	pinkish.
<i>pur.</i>	purple.
<i>pursh. purpsh.</i>	purplish.
<i>rich p.</i>	rich purple.
<i>rdsh.</i>	reddish.
<i>ro.</i>	rose-coloured.
<i>saff.</i>	saffron-coloured.

<i>salm.</i>	salmon-coloured.
<i>scar. scr.</i>	scarlet.
<i>spot.</i>	spotted.
<i>strip.</i>	striped.
<i>varieg.</i>	variegated.
<i>vermil.</i>	vermilion-coloured.
<i>vio.</i>	violet-coloured.
<i>wht. w. whitsh.</i>	white or whitish.

Wast.	Waste places.

BOTANICAL DICTIONARY.

ABE

- A BELE TREE.** See *Pópulus álba*.
- ABELLIA, Brown.** Named in honour of Dr. C. Abel, physician to the Embassy to China under Lord Amherst. *Linn.* 5, Or. 1, Nat. Or. *Caprifoliaceæ*. Pretty flowering shrubs, desirable as greenhouse plants or for turning into the flower borders during summer. They merely require the ordinary treatment of greenhouse plants, and are easily increased by cuttings. *Synonymes*: 1, *Vesàlea floribúnda*, V. *hirta*; 2, *Abèlia serrata*.
- floribúnda 1. Red 3, G. Ev. S. 3 Mexico . 1842
 rupéstris . . . Ro. wht. 9, G. Ev. S. 3 China . 1844
 triflora . . . Pa. red w. 6, G. Ev. S. 4 E. Ind. . 1847
 uniflora 2 . . . Pale red 3, G. Ev. S. 3 China . 1844
- ABIES.** See *Pinus*.
- ABILDGAÁRDIA, Vahl.** After Professor Abildgaard, of Copenhagen. *Linn.* 3, Or. 1, Nat. Or. *Cyperaceæ*. Worthless dwarf species of grass-like plants; increased by division, and grown in any common soil.
- monostáchya . . . Apetal 6, Grass ½ N. Holl. . 1819
 tristáchya . . . Apetal 6, Grass ½ N. Holl. . 1824
- ABORTION,** imperfect or untimely development.
- ABRÔMA, Linn.** From *a*, privative, and *broma*, food; unfit to be eaten. *Linn.* 18, Or. 1, Nat. Or. *Sterculiaceæ*. Handsome free-flowering species of easy culture, delighting in a compost of loam and peat. Propagated with ease from seeds or cuttings. The bark of *A. angústá* furnishes a very tough fibrous tissue, suited for manufacturing into cordage.
- angústá . . . Pur. 8, S. Ev. T. 10 E. Ind. . 1770
 fastuósa . . . Pur. 8, S. Ev. T. 10 N. S. W. . 1800
- ABRÔNIA, Jussieu.** From *abros*, delicate; referring to the involucrem. *Linn.* 5, Or. 1, Nat. Or. *Nyctaginaceæ*. Handsome trailing plants, multiplied by division, and grown in sandy peat. *Synonyme*: 1, *Tricrátus admirábilis*.
- mellifera . . . Wht. 7, H. De. Tr. ½ California 1826
 umbelláta 1 . . . Red 4, H. Ev. Tr. ½ California 1823
- ABRUPT,** blunt, broken off.
- ABRUPTLY-PINNATE.** Pinnate leaves, terminating without an odd leaflet.
- ÁBRUS, Linn.** From *abros*, soft; in allusion to

ACA

- the delicacy of the leaves. *Linn.* 17, Or. 4, Nat. Or. *Fabaceæ*. This pretty climbing species (Wild Liquorice) must have a strong heat to enable it to flower well. It delights in loam and peat, and is propagated readily from cuttings, in sand, under a glass. The roots have the property of the liquorice of the shops, while the seeds, if eaten in any quantity, produce violent headache.
- precatórius . . . Pa. pur. 4, S. De. Cl. 12 W. Ind. . 1680
- ABSÍNTHIUM.** See *Artemisia*.
- ABSUS.** See *Cássia Absus*.
- ABÛTA, Aublet.** From *Abouta* or *Abuta*, its name in Guiana. *Linn.* 22, Or. 10, Nat. Or. *Menispermaceæ*. An ornamental evergreen climber. Loam and peat; and increased by division. From the branches of this plant a drink is made by the natives of Cayenne, and used by them against obstructions of the liver rufescens . . . Grn. yel. 4, S. Ev. Cl. 10 Guiana . 1820
- ABÛTILON, Mench.** Ancient name of a plant analogous to the marsh mallow. *Linn.* 16, Or. 8, Nat. Or. *Malvaceæ*. Greenhouse shrubs of the easiest culture, and of considerable beauty. *Synonymes*: 1, *Sida Bedfordiána*; 2, *S. globiflóra*; 3, *S. graveólens, hirta, tomentósa*; 4, *S. integerríma*; 5, *S. pulchélla*; 6, *S. picta*; 7, *S. vendsa*; 8, *S. vitifolia*.
- Bedfordiánium 1 Y. red 11, S. Ev. S. 14 Brazil . 1838
 esculéntum . . . Purple 9, S. Ev. S. 8 Brazil .

 insigne . . . W. crm. 6, G. Ev. S. 6 N. Gren. 1851
 integerrímum 4 Yellow 5, S. Ev. S. 14 N. Gren.
 pæoniæflórum . . . Rose 1, G. Ev. S. 6 Brazil . 1843
 pulchéllum 5 . . . White 9, G. De. S. 8 N. S. W. 1821
 rufínérve . . . Straw 8, G. Ev. S. 6 Rio . . 1845
 striátum 6 . . . Oran. all, G. Ev. S. 10 Brazil . 1837
 vendsum 7 . . . Or. red 7, G. Ev. S. 10
 vitifólium 8 . . . White 7, H. Ev. S. 6 Chili . 1837
- See *Sida*.
- Garden Varieties*: *Alba, Alphonse Karr, Bergeranger, Arago, De Caruchy, Duc de Malakoff, Manetti, Regélie, Van Houttei, &c.*
- ACÁCIA, Necker.** From *ac*, a point, or *akazo*, to sharpen; many of the species having thorns or prickles. *Linn.* 23, Or. 1, Nat. Or. *Fabaceæ*,

Suborder Mimoseae. Very ornamental plants, of neat growth and elegant foliage. All grow well in sandy loam and peat, and cuttings taken off at a joint, root freely in sand under a glass; portions of the strong roots planted in soil, in heat, leaving the points out, produce young plants; but the best plants are obtained from seed. The hardy species require to be slightly protected in severe weather. The bark of some species contains the tanning principle in a great degree, particularly *A. arabica*; the bark of which is largely used in tanning leather, and is in India regarded as a powerful tonic. Gums are yielded in considerable quantities by some species; and in India an intoxicating principle is obtained from other species. *Synonymy:* 1, *A. acicularis*; 2, *Mimosa tortuosa*; 3, *A. strigosa*; 4, *M. Giraffe*; 5, *A. prostrata*; 6, *A. viscosa*; 7, *A. stolonifera*; 8, *M. marginata*; 9, *A. floribunda*; 10, *A. linearis*; 11, *A. mollissima*; 12, *A. impressa*; 13, *M. nigricans*; 14, *A. ambigua*; 15, *M. verticillata*; 16, *M. verticillata*; 17, *A. tacifolia*; 18, *A. seligera*; 19, *A. obtusifolia*; 20, *A. uncinata*; 21, *A. isciophylla*; 22, *A. Smilacifolia*; 23, *A. undulata*; 24, *A. trigona*. See *Prosopis*, *Darlingtonia*, *Gagnebina*, *Inga*, and *Lagonychium*.

ACÆNA, *Linn.* From *akaina*, a thorn; in allusion to the thorns or bristles on the calyx or fruit. *Linn.* 2, Or. 1, Nat. Or. *Sanguisorbaceæ*. Humble, shrubby, curious plants, growing well in sandy loam and peat. Cuttings will root planted in soil, and protected by a frame or hand-glass. *Synonymes*: 1, *Ancistrum adscendens*; 2, *An. argenteum*; 3, *An. latebræsum*.

ACALYPHA, *Linn.* From *a*, privative, *kalos*, pleasant, and *aphe*, touch. *Linn.* 21, Or. 1, Nat. Or. *Euphorbiaceæ*. Worthless species of the easiest culture.—*alopeuroidea*, *brachystachya*, *caroliniana*, *ciliata*, *colorata*, *cuspidata*, *diversifolia*, *hispidata*, *indica*, *integrifolia*, *lævigata*, *macrostachya*, *mollis*, *paniculata*, *polystachya*, *prunifolia*, *réptans*, *rûbra*, *scabrâra*, *virgata*, *virginica*.

ACANGA. See *Bromelia Acanga*.

ACANTHACEÆ. A natural order of plants, chiefly tropical, consisting of soft-wooded herbs, undershrubs, and shrubs; many of them very beautiful.

ACANTHIUM. See *Omapòrdum Acanthium*.

ACANTHOLIMON, *Boiss.* From *akanthos*, a spine, and *limon*, sea lavender. Leaves and bracts. *Linn.* 5, Or. 5, Nat. Or. *Plantaginææ*. Plants resembling the *Stâlice* and requiring similar treatment. They are increased by division of the roots, and grow

in any light rich soil. *Synonyme*: 1, *Stâlice ararati*.

glumaceum 1. Rose 5, F. Ev. P. 4 Armenia . 1845
ACANTHONEMA, *Hooker*. From *akanthos*, a spine, and *nema*, a filament; from the spine-like form of some of the filaments. *Linn.* 14, Or. 2, Nat. Or. *Cyrtandraceæ*. Plants resembling in habit the species of *Streptocarpus*, and requiring similar treatment. They are increased by division of the roots.

strigosa Dk. pur. 5, S. Her. P. 1 W. Africa 1861

ACANTHOPHIPPIUM, *Blum.* The meaning of the name is not explained. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. *A. bicolor* is a very curious and rather rare plant; in habit it much resembles a *Geoddrum*, only it has pseudo-bulbs instead of tubers, while its rich flowers are produced from near the base of the shoots. *A. striatum* is much inferior. They will thrive well with the same treatment as *Blétia*, provided they have a great deal of heat and moisture during the growing season. *Synonyme*: 1, *A. javênse*.

bicolor Yel. red 6, S. Epi. 3 Ceylon . 1838
javanicum 1 . . Cr. rose 8, S. Epi. 1 1/2 Java . 1844
striatum White 6, S. Epi. 3 Nepal . . .
syhetense White 6, S. Epi. 3 Sylhet . . 1837

ACANTHOSPÉRMUM. From *akanthos*, a spine, and *sperma*, a seed. *Linn.* 19, Or. 4, Nat. Or. *Asteraceæ*.—*Xanthoides*.

ACANTHOSTÁCHYS. From *akanthos*, a spine, and *stachys*, a spike. *Linn.* 6, Or. 1, Nat. Or. *Bromeliaceæ*. Plants easily cultivated in the stove, with a soil composed of equal parts of sand, decayed wood, and rotten leaves. They are propagated by suckers stuck in a hot-bed. *Synonyme*: 1, *Hohenbergia strobilacea*.

strobilacea 1. Red y. 6, S. Her. P. 4 Brazil . . 1840

ACANTHUS, *Linn.* From *akanthos*, a spine, some of the species being spiny. *Bear's Breech*, *Linn.* 14, Or. 2, Nat. Or. *Acanthaceæ*. Coarse, yet stately, herbaceous plants, flourishing in almost any soil or situation, and increased by division or by seed with great facility. *A. mollis* is said to be emollient; and it is conjectured that the leaf of this plant furnished the ancients with the elegant Acanthus leaf of their architecture. See *Dilwària*.

carduifolius . Blue 8, G. Her. P. 3 C. G. H. . 1816
hispanicus . White 8, H. Her. P. 3 Spain . . 1700
ilicifolius S. Ev. S. 3 E. Ind. . 1759

spinosissimus Pur. w. 8, H. Her. P. 3 S. Eur. . 1629
spinösus Pur. w. 8, H. Her. P. 3 Italy . . . 1629

ACÀRNA, *Willdenow*. Theophrastus describes a thistle under that name. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. Insignificant plants, void of any known merit, and of the easiest culture in common soil. *Synonyme*: 1, *Atracetylus cancellata*.—*cancellata* 1, *gummifera*.

ACAULIS, without a stem.

ACCESSORY, something added to the usual number of organs.

ACCRETE, grown together.

ACCUMBENT, lying on something else.

ÁCER, *Linn.* The word, in Latin, signifies vigorous, or sharp, and comes from *ac*, meaning

a point, in Celtic. The name is used to designate this genus on account of the wood having formerly been much sought after for manufacturing into heads of pikes and lances. *Linn.* 23, Or. 1, Nat. Or. *Aceraceæ*. For the most part beautiful trees, of considerable size, generally employed in forming avenues or the back of shrubberies. The soil they delight most to grow in is open sandy loam, in which also cuttings will strike freely in the open air; or by layers put down in the autumn they may be increased; but all the best plants are obtained from seed, which should be sown soon after gathering. From the sap of *A. saccharinum* and other species, the North Americans make a considerable quantity of very good sugar. *Synonymes*: 1, *A. eriocarpon*, *tomentosum*, *glacium*, *virginianum*, *rubrum*; 2, *A. sempervirens*; 3, *A. spicatum*; 4, *A. striatum*, *hybridum*; 5, *laurifolium*. See *negando*.

ACÉPHALUS, a privative, and *kephale*, a head.

ACERACEÆ, an order of fine hardy trees, suitable for park and pleasure garden scenery, of which the common sycamore and the maple are representatives. All the larger species abound in a saccharine sap, from which the fine crystalline sugar of North America is prepared. They all grow in moderate climates.

ÁCERAS, *Robert Brown*. From *a*, privative, and

keras, horn, on account of the spur being absent. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. Very curious plants, rather troublesome to cultivate. A light loamy soil, mixed with chalk, delights them most, and they can only be increased by seeds. *Synonyme*: 1, *Orchis secundiflora*, *Ophrys densiflora*.

anthropophora Green 6, H. Tu. P. $\frac{1}{2}$ England ch. fi. secundiflora . Violet 7, F. Tu. P. $\frac{1}{2}$ S. Eur. . 1829

ACERÁTUM, *Decandolle*. Derived from *a*, privative, and *keras*, a horn; implying that the anthers are destitute of horns. *Linn.* 11, Or. 1, Nat. Or. *Tiliaceæ*. An interesting species, grown in peat and loam; multiplied from cuttings.

oppositifolium White 6, S. Ev. T. 20 Amboyna 1818

ACEROSE, fine and slender, with a sharp point.

ACETARIOUS, anything belonging to the salad tribe of plants.

ACETOSE, sour, tart, acid.

ACETOSÉLLA. See *Rumex Acetosélla*, and *Oxalis Acetosélla*.

ACETABULIFORMIS, saucer shaped.

ACHÁNIA, *Swartz*. From *akanos*, closed; corolla does not expand wide. See genus *Malvaniscus*, to which the species of *Achánia* properly belong.

ACHILLÉA, *Linn.* Named after Achilles, a pupil of Chiron, and the first who used the plant so called in medicine. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. Showy, free-flowering species, succeeding well in any common soil, and readily increased by dividing the roots. *A. tomentosa* is, by its bright yellow flowers, well suited for ornamenting rock-work. The dried leaves of *A. Ptarmica*, powdered, and taken up the nostrils, excite sneezing. *A. moschata* is sudorific and acrid, and makes a wholesome food for cattle. *Synonymes*: 1, *A. serrata*; 2, *A. ambigua*; 3, *A. filicifolia*; 4, *A. ochroleuca*; 5, *A. helvética*; 6, *A. aména*; 7, *A. aména*.

Bannatica, dentifera, distans 2, dubia, heterophylla, intermedia, magna, Millefolium rubrum, montana, polyphylla, rosea, stricta.

ACHIMENES, P. Browne. A word of unknown meaning. *Linn.* 14, Or. 2, Nat. Or. *Gesneraceæ*. The above name was originally given to two species by Dr. Patrick Browne in his History of Jamaica, one of which has been long known in our gardens as *Trevirana coccinea*, or *Cyrtilla pulchella*; the original name has been restored by De Candolle in his Prodromus. The recent acquisitions to this elegant and free-flowering genus, rank amongst the most beautiful of our conservatory plants. For cultivation see *Trevirana*: they are propagated by cuttings, or by the imbricated buds which they produce underground and on the stems. *Synonymes*: 1, *Trevirana coccinea*, *Cyrtilla pulchella*; 2, *A. heterophylla, ignescens, Trevirana heterophylla*; 3, *Acisánthera atrosanguinea, Cheiránthera atrosanguinea*.

Garden Hybrids.—The hybrids are very numerous, and some exceedingly beautiful. Amongst these may be mentioned *Adonis, amabilis, Aurora, elegans, Escheriana, Estella, gigantea, ignea, magnifica, Mazzeppa, and Roelia*.

ACHLYS, Decandolle. From *achlys*, meaning obscure, in allusion to the obscurity of the genus. *Linn.* 13, Or. 1, Nat. Or. *Berberidaceæ*. A tuberous-rooted plant, of little beauty, multiplied by cuttings, and grown in sandy loam. *triphylla* . . . Wht. 5, H. Tu. P. 2 1/2 N. Amer. 1827

ACHNANTHES, Agardh. Derived from *achne*, froth of the ocean, and *anthos*, flower. *Linn.* 24, Or. 7, Nat. Or. *Diatomaceæ*. Curious aquatic productions, said to separate by degrees into fragments: between every articulation or joint is one or more crystalline points—*brèves, longipes, unipunctata*.

ACHNODONTON, Palisot de Beauvois. From *achne*, a chaff, or husk, and *odon*, a tooth. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. Very insignificant plants, of the easiest culture, increased by division and seeds. *Synonyme*: 1, *Phalaris Bellardi*. Bellardi 1, tenuis.

ACHRAS, Linn. The Greek name for the pear, or from *ac*, meaning a point, in Celtic, in allusion to the stiff spines with which the tree is covered. *Linn.* 5, Or. 1, Nat. Or. *Sapotaceæ*. These plants, in this country, possess little merit, but in the West Indies the fruit produced by some of the species is much esteemed. *A. sapota* yields a fruit as large as a quince, the flesh of which is as yellow as a carrot; it has an agreeable smell, and very rich taste; the seeds, two in number, are aperient and diuretic; rich loamy soil; cuttings. See *Bumelia, Lucuma, and Mimaisops*.

ACHYROCLINE. From *achuron*, chaff, and *kline*,

- a bed—flowers. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. *Synonymes*: 1, *Gnaphalium alatum*—*alatum* 1.
- ACHYRÓNIA**, *Willd.* From *achuron*, chaff, in allusion to the chaffy hairs on the branches and leaves. *Linn.* 17, Or. 4, Nat. Or. *Fabæcæ Papilionacæ*. The species is of easy culture. *villôsa* . . . Yellow 7, G. Ev. S. 8 N. Holl. . 1819
- ACHYROPÁPPUS**, *De Cand.* *Achuron*, chaff, and *pappus*, down. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. A plant of little beauty, growing in common light soil. *schkuhrioides*. Yellow 7, Har. An. 1 Mexico . 1880
- ACHYRÓPHORUS**, *D. Don.* *Achuron*, chaff, and *phoros*, to bear; the receptacle being chaffy. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. Mere weeds, of the easiest culture and propagation. *Synonymes*: 1, *Hypocheris helvética*; 2, *H. maculata*; 3, *H. radicata*—*helvética* 1, *maculata* 2, *radicata* 3.
- ACIANTHÈRA**, *Scheid.* *Linn.* 20, Or. 1, Nat. Or. *Orchidacæ*. "A small Epiphyte resembling a *Pleurothallis*."—*Bot. Reg.* *punctata* . . . Greenish 4, S. Epi. ¼ Brazil . . 1843
- ACIANTHUS**, *Robert Brown.* From *akis*, a point, and *anthos*, a flower; in reference to the bristly tips of the flower. *Linn.* 20, Or. 1, Nat. Or. *Orchidacæ*. Brown, small-flowered, tuberous-rooted plants: multiplied by divisions, and grown in loam and peat. *caudatus* . . . Brown 5, G. Tu. P. 1 N. Holl. . 1824 *exsertus* . . . Brown 5, G. Tu. P. 1 N. Holl. . 1822 *fornicatus* . . . Brown 5, G. Tu. P. 1 N. Holl. . 1822
- ACICÀRPHA**, *Jussieu.* From *akis*, a point, and *carphe*, palea; on account of the palea being spiny. *Linn.* 19, Or. 4, Nat. Or. *Calyceracæ*. A curious dwarf species, succeeding in peat and loam; propagated from divisions. *Synonyme*: 1, *Cryptocàrpha spatulata*. *spatulata* 1 . . . White 7, S. Her. P. ¼ Brazil . . 1824
- ACICULAR**, needle-shaped.
- ACIDÒTON**, *Swartz.* From *akidotos*, pointed; in allusion to the stinging hairs on the leaves. *Linn.* 21, Or. 9, Nat. Or. *Euphorbiacæ*. A species of no beauty, easily grown and propagated:—*arens*.
- ACINÁCIFORM**, scimitar-like shaped.
- ACINÈTA**, *Lindley.* From *akineta*, immovable—lip jointless. *Linn.* 20, Or. 1, Nat. Or. *Orchidacæ*. This genus is nearly allied to *Peristèria*. *Synonymes*: 1, *Peristèria Bårkeri*; 2, *P. Humboldtii*, *Bot. Reg.*, *Angulda superba*, *Lindl.*; 3, *Neippèrgia chrysantha*. *Bårkeri* 1 . . . Yellow 6, S. Epi. 2 Mexico . 1843 *chrysantha* 3 . . . Y. w. cr. 5, S. Epi. 2 Mexico . 1849 *dènsa* . . . S. Epi. . . 1843 *Humboldtii* 2 . . . Pur. brn. 8, S. Epi. 1 S. Amer. 1843 *fùlva* . . . Copper 3, S. Epi. 2 Venezuela 1842 *Warzewitzii* . . . Yel. red 7, S. Epi. 2 S. Amer. . 1849
- ACINODÉNDRON.** See *Micòmia Acinodéndron*.
- ACÍNULA**, *Fries.* From *Acinus*, stone-like seeds. *Linn.* 24, Or. 9, Nat. Or. *Mucoracæ*. This is one of the plants known to farmers as blight, ergot, or spur, and is in some seasons most destructive amongst corn, especially crops of rye. *Clàvus*.
- ACIÒTIS**, *D. Don.* From *akis*, a point, and
- ous*, an ear; in allusion to the petals. *Linn.* 10, Or. 1, Nat. Or. *Melastomacæ*. Pretty species, particularly *aguática*; may be propagated and grown the same as the genus *Melastoma*. *Synonymes*: 1, *Rhèxia aguática*. *Melastoma aguática*: 2, *Melastoma discolor*. *aguática* 1 . . . W. red 6, S. Ev. S. 1 S. Amer. . 1793 *discolor* 2 . . . W. red 6, S. Ev. S. 1 Trinidad . 1816
- ACIS**, *Salisbury.* Taken from *Acis*, a shepherd, the son of Faunus. *Linn.* 6, Or. 1, Nat. Or. *Amaryllidacæ*. This is a genus of pretty, dwarf, bulbous-rooted plants, delighting in sandy soil, and multiplied by offsets. *Synonymes*: 1, *Leucòdium autumnale*; 2, *L. roseum*; 3, *L. tricophyllum*. *autumnalis* 1 . . . Pink 9, H. De. Bu. ¼ Portugal . 1629 *grandiflorus* . . . Wht. 8, H. De. Bu. ¼ Numidia . 1820 *roseus* 2 . . . Red 8, H. De. Bu. ¼ Corsica . 1820 *trichophyllus* 3 . . . Wht. 1, H. De. Bu. ¼ Spain . . 1820
- ACISANTHÈRA**, *Jussieu.* Taken from *akis*, a point, and *anthera*, an anther, on account of the anthers being pointed. *Linn.* 10, Or. 1, Nat. Or. *Melastomacæ*. A curious evergreen shrub; for propagation and culture see *Melastoma*. *Synonyme*: 1, *Rhèxia acisanthera*. *quadrata* 1 . . . Pur. 2, S. Ev. S. 3 Jamaica . 1804
- ACMADÈNIA**, *Barlt.* Taken from *akme*, a point, and *aden*, a gland; in allusion to glands on the anthers. *Linn.* 5, Or. 1, Nat. Or. *Rutacæ*. A handsome little species; for culture and propagation see *Diosma*. *Synonyme*: 1, *Adenàndra tetragona*. *tetragona* 1 . . . Wht. 6, G. Ev. S. 2 C. G. H. . 1798
- ACMÉLLA**, *Rich.* Taken from *akme*, a point; in allusion to the pricking taste of the foliage. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. Uninteresting dwarf trailing species; merely requiring to be sown in the open ground. *Synonymes*: 1, *Spilánthes Acmélla*. 2, *S. repens*. See *Heliòpsis* and *Zaluzànea*. *occidentalis* . . . Yel. 7, H. Tr. A. 1¼ S. Amer. . 1825 *repens* 2 . . . Yel. 7, H. Tr. A. 1¼ Carolina . 1818 *mauritiana* 1 . . . Yel. 7, S. Tr. A. 1¼ Mauritius . 1768
- ACMÈNA**, *Decandolle.* Derived from *Acmena*, a nymph of Venus. *Linn.* 12, Or. 1, Nat. Or. *Myrtacæ*. An ornamental species; for culture, &c., see *Tristania*. *Synonyme*: 1, *Metrosideros floribunda*. *floribunda* 1 . . . Wht. 7, G. Ev. S. 6 N. Holl. . 1788
- ACNÌDA**, *Linn.* Taken from *a*, privative, and *knide*, nettle; the plant being like a nettle, but without stings. *Linn.* 22, Or. 6, Nat. Or. *Chenopodiacæ*. An uninteresting annual, only requiring to be sown in the open ground and kept clean:—*cannabina*.
- ACOCANTHÈRA**, *Don.* From *acoce*, a mucro, and *anthera*, an anther; anthers mucronate. A genus consisting of only a few species, which are included under *Céstrum*. See *Céstrum*.
- ACOFIDIUM.** See *Trichocentrum*.
- ACONITE.** See *Aconitum*.
- ACONITUM**, *Tournefort.* The name is given on account of some species being found plentiful about Acone, a town in Bithynia. *Linn.* 13, Or. 3, Nat. Or. *Ranunculacæ*. Ornamental, tall, free-flowering, very hardy plants, succeeding well under the shade of trees; increased

by division or by seeds. All the species are to be dreaded, being highly poisonous. *A. Napéllus*, and *cámmarum*, are drastic, and acrid in a high degree. The aconite has, however, become of great service in many very troublesome disorders. In Sweden favourable operations have been effected by an extract of the juice of the leaves of *A. Napéllus* in cases of rheumatism and intermittent fevers, applied in doses of from a grain to a scruple twice a day or oftener. A much larger dose has also been safely administered. *Synonymes*: 1, *A. inclinatum*. 2, *A. altissimum*. 3, *A. pyrenáicum*. 4, *A. strictum*. 5, *A. pallidum*. 6, *A. Cámmarum*. 7, *A. Napéllus pubescens*. 8, *A. láxum*. 9, *A. rostratum*.

ACÓNTIAS, Sm. Derivation of name unknown. For culture see *Arum* and *Caládium*. *Synonymes*: 1, *Arum sagittafólium*; 2, *Caládium variegátum*.

hastifólius 1 . Gn. y. 5, S. Tu. P. 1 S. Amer.
variegátus 2 . Gn. y. 5, S. Tu. P. 1½ S. Amer. 1838

ÁCORUS, Linn. Derived from *a*, privative, and *kore*, pupil of the eye, in reference to its medical properties. *Linn.* 6, Or. 1, Nat. Or. *Orentiáceæ*. Marshy plants, of the easiest culture. *A. Calamus* is extremely useful, and

Linnæus says, the roots powdered might supply the place of foreign spices; it is very aromatic and stimulant.

Calamus . . . Apetal. 6, H. Aq. P. 2 Britain, mrsbs.
gramineus . . . Apetal. 2, H. Her. P. 1/2 China . . . 1796
terrestris . . . Apetal. 6, H. Her. P. 1 China . . . 1822

ACOTYLEDONES. Plants destitute of cotyledons or seed leaves.

ACRADENIA, Kipp. Derived from *akros*, the summit, and *aden*, a gland, top of ovary. *Linn.* 10, Or. 1, Nat. Or. *Ruticææ*. Little greenhouse plants, easily cultivated in sandy loam and peat, and increased by half-ripened cuttings. *Synonyme*: 1, *Zièria Franklthnia*.

Franklinia 1 . . . Wht. 4, G. Ev. S. 4 V. D. L. . . . 1850

ACRE, sharp, pungent.

ACREMONIUM, Link. Derived from *akremon*, a branch, in reference to the clustered thecæ. *Linn.* 24, Or. 9, Nat. Or. *Botrytæææ*. Very curious plants, found growing generally upon dead sticks—*fascum*, *verticillatum*, *alternatum*.

ACRIOPSIS, Blume. From *akros*, summit, and *opsis*, eye. *Linn.* 20, Or. 1, Nat. Or. *Orchidæææ*. "Pretty little Epiphytes, with the habits of *Sarcanthus pallidus*."—*Bot. Reg.*

densiflora . . . Green rose 5, S. Epi. 1/2 Borneo . . . 1845
javânica . . . Yellow gn. 5, S. Epi. 1/2 Java . . . 1840
picata . . . W. gn. pur. 5, S. Epi. 1/2 Bantam . . . 1843

ACROCEPHALUS, Bentham. The name is derived from *akros*, summit, *kephale*, head; on account of the flowers being on the top of the branches. *Linn.* 14, Or. 1, Nat. Or. *Lamiæææ*. A plant of little beauty; increased from slips, and grown in sandy loam. *Synonyme*: 1, *Lumnitzera capitata*.

capitatus 1 . . . White 7, H. A. 1 China . . . 1806

ACROCLINIUM, Hook. Derivation of name unknown. *Linn.* 19, Or. 2, Nat. Or. *Asteræææ*. A genus of beautiful everlasting flowers, natives of South-West Australia, and requiring the same treatment as other half-hardy annuals.

atroroseum . . . Dark rose 6, F. An. Hybrid . . .
roseum . . . Rose 6, F. An. Australia 1855

ACROCÖMIA, Martius. The leaves are in tufts, hence the derivation of the name, *akros*, top, and *kome*, tuft. *Linn.* 21, Or. 6, Nat. Or. *Palmæææ*. This genus comprehends a portion of those majestic species of palms which, by their towering stems and gigantic foliage, soar to the height of thirty or forty feet, and give a feature of exquisite grandeur to the character of the countries they inhabit. They prefer a light sandy loam; and to grow them well, an atmosphere very moist and warm is indispensable. They are increased from suckers. *A. aculeata* is reported to have a trunk the size of a man's body, and the leaves prickly and longer than those of the *Cocos*. It produces a fruit the shape and size of a crab, with a thin, sweetish, astringent pulp, within which is a nut inclosing a white sweet eatable kernel. *Synonymes*: 1, *Cocos aculeata*; 2, *C. fusiformis*; 3, *Bactris globosa-minor*; 4, *Bactris globosa, Cocos fusiformis*.

aculeata 1 . . . Yellow S. Palm. 40 W. Ind. . . 1796
fusiformis 2 . . . Yellow S. Palm. 40 Trinidad . . . 1731
globosa . . . Yellow S. Palm. 40 St. Vinc. . . 1824

gulanensis . . . Yellow S. Palm. 40 Demerara 1824
horrída . . . Yellow S. Palm. 40 Trinidad . . . 1825
minor 3 . . . Yellow S. Palm. 20 Trinidad . . . 1820
scleroearpa 4 . . . Yellow S. Palm. 40 W. Ind. . . 1731
tenuifolia . . . Yellow S. Palm. 40 Brazil . . . 1824

ACROGENS. Flowerless plants, as ferns and mosses.

ACROGLÖCHIN, Schrader. Taken from *akros*, summit, and *glochín*, spear point. *Linn.* 21, Or. 5, Nat. Or. *Amarantæææ*. An insignificant species, grown in any common soil, and increased from suckers. *Synonyme*: 1, *Amaranthus Acroglöchin*—*chenopodioides* 1.

ACRONYCHIA, Forster. From *akros*, tuft or summit, and *onyx*, a claw, on account of the original species having an incurved point at the top of the petals. *Linn.* 8, Or. 1, Nat. Or. *Aurantidæææ*. A tall handsome shrub, bearing clusters of white flowers of an exquisite odour, resembling orange blossoms, combined with the aromatic warmth of ginger. Ordinary greenhouse treatment suits it; and it may be propagated by cuttings, in sand, under a bell-glass. *Cunninghami* Wht. 7, G. Ev. S. 7 Moreton Bay 1838

ACROPËRA, Lindley. From *akros*, the extremity, and *pera*, a small sack, because of the saccate appendage at the apex of the labellum. *Linn.* 20; Or. 1, Nat. Or. *Orchidæææ*. Very singular and rather pretty plants, producing pale yellow, brown and spotted purple flowers in pendent racemes. For culture and propagation, see *Stanhöpea*. *Synonyme*: 1, *Maxillaria galeata*.

Armeniaca . Orange 7, S. Epi. 1 Nicaragua . 1849
cornuta . . . Brown 6, S. Epi. 1 Guatemala 1840
flavida . . . Yellow 6, S. Epi. 1 Mexico . . . 1850
Loddigisii 1 Yel. & spot. 3, S. Epi. 1 Mexico . . . 1823
citrina . . . Pale yellow 8, S. Epi. 1/2 Mexico . . .

ACROPHÖRUS, Presl. From *akros*, summit, and *phoros*, to bear. *Linn.* 24, Or. 1, Nat. Or. *Polypodiæææ*. A genus of Ferns, nearly related to *Davallia*, and requiring similar treatment. *Synonymes*: 1, *Davallia hispida*; 2, *D. Novæ Zealandiææ*.

affinis . . . Brown 5, S. Fern 1 Borneo . . .
hispida 1 . . . Brown 5, S. Fern 1 N. Zealand . . .

ACROPHÝLLUM, Benth. From *akros*, summit, and *phyllon*, a leaf, in allusion to the leaves growing at the apex of the branches, above the whorls of flowers. *Linn.* 10, Or. 1, Nat. Or. *Cunoniæææ*. Very handsome greenhouse plants, flowering profusely during the spring months: of easy culture, and readily increased, by cuttings of the half-ripened wood. *Synonyme*: 1, *Acrophýllum (Weinmannia) venosum*. *verticillatum* 1 Red. y. 3, G. Ev. S. 3 N. Holl. . . 1886

ACRÖPTERIS, Smith. Derived from *akros*, a point, and *ptèris*, a fern. See *Asplenium*.

ACRÖPTILON. From *akros*, a point, and *ptilon*, a feather. *Linn.* 19, Or. 1, Nat. Or. *Asteræææ*. See *Centaurea* and *Serratula*.

ACROSPËRMUM, Tode. Derived from *akros*, summit, and *sperma*, seed, in reference to the tumids on the apex of the plant emitting sporules. *Linn.* 24, Or. 9, Nat. Or. *Uredinæææ*. Interesting and minute productions, existing as parasites upon decayed vegetables—*compressum*, *cornutum*.

ACROSPORIUM, *Nees*. This word is taken from *akros*, top, and *spora*, spore, implying that the latter occupies the summit of the filaments. *Linn.* 24, Or. 9, Nat. Or. *Mucoraceae*. Minute species found upon the leaves of grasses and rotten oranges—*fasciculatum*, *monilioides*.

ACROSTICHUM, *Linn.* Supposed to refer to the beginning of a verse, on account of the back surfaces of the leaves being so lined as to resemble in some degree the commencement of lines in poetry. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceae*. Very interesting species of tropical ferns, delighting mostly in a mixture of loam and peat. They may be increased either by dividing at the roots, or by seed. *A. aureum* sometimes grows to the height of four, five, and even six feet. *A. alcicorne* is a curious species, common in our plant-houses. *Synonymes*: 1, *Neurocallis praestantissima*; 2, *Lomariopsis yapurénse*. See *Gymnogramma*, *Lomaria*, *Niphobolus*, and *Nothochlœna*.

ACTINÉLLA, *Pers.* See *Eriophyllum*.

ACTINOCÁRPU, *Robert Brown*. The derivation of the name is from *aktin*, a ray, and *karpos*, fruit, in allusion to its radiated appearance. *Linn.* 6, Or. 4, Nat. Or. *Alismaceae*. Interesting floating aquatics, thriving only in water, or in moist situations. *A. minor* is a native of New South Wales, and grows well in a pot of sandy peat immersed in water. Seeds. *Synonymes*: 1, *Alisma Damasónium*, *Damasónium stellatum*.
Damasónium 1 Wht. 7, H. Aq. P. $\frac{1}{4}$ England, ditches
minor . . . Wht. 6, G. Aq. P. $\frac{1}{2}$ N. S. W.

ACTINOCHLÔA, *Willd.* The name is derived from *aktin*, a ray, and *chloa*, grass, resemblance to grass. *Linn.* 3, Or. 2, Nat. Or. *Graminaceae*. Weeds of the simplest culture. *Synonymes*: 1, *Chondrosium procumbens*; 2, *C. tenue*.—*hirsuta*, *procumbens* 1, *prostrata*, *tenuis* 2.

ACTINÔMERIS, *Nuttall*. The name is taken from *aktin*, a ray, and *meris*, part, alluding to the radiated appearance peculiar to these plants. *Linn.* 19, Or. 3, Nat. Or. *Asteraceae*. Ornamental species; for culture, &c., see *Calliopsis*. *Synonymes*: 1, *Coreopsis alata*; 2, *C. procera*; 3, *C. alternifolia*, *Verbesina Coreopsis*.

ACTINOPHYLLUM, *Ruiz. and Pavon*. From *aktin*, a ray, and *phyllon*, a leaf; leaflets disposed in rays round a centre. *Linn.* 5, Or. 5, Nat. Or. *Araliaceae*. Plants possessing little beauty, easily grown in light sandy loam and peat, and increased by cuttings.

digitatum . . . Green 4, S. Ev. S. 10 E. Ind. . 1820

ACTINOTHYRIUM, *Kunze*. Compounded from *aktin*, a ray, and *thyriou*, a door, alluding to the radiated integument of the sporidia. *Linn.* 24, Or. 9, Nat. Or. *Uredinaceae*. The species appears in the early part of the year upon the culms of grasses, and is orbicular, and almost black.—*Graminis*.

ACTINÔTUS, *Labillard.* Derived from *actinotus*, radiated, in reference to the rayed appearance of the involucrem. *Linn.* 5, Or. 2, Nat. Or. *Apiaceae*. Interesting plants with curious leaves; increased by division, and grown in loamy soil. *Synonyme*: 1, *Eriocailta major*.

ADAM'S APPLE. See *Musa paradisiaca*; *Citrus Limbetti Adami*.

ADAMSIA. See *Puschkinia*.

ADAM'S NEEDLE. See *Yucca*.

ADANSONIA, *Linn.* Dedicated to Michael Adanson, a celebrated French botanist. *Linn.* 16, Or. 8, Nat. Or. *Sterculiaceæ*. The largest tree in the world is the Adansonia or Baobab-tree, the trunk of which has been found with a diameter of thirty-feet; but its height is not in proportion. "It is emollient and mucilaginous in all its parts. The leaves dried and reduced to powder constitute Lalo, a favourite article with the Africans, which they mix daily with their food, for the purpose of diminishing the excessive perspiration to which they are subject in those climates, and even Europeans find it serviceable in cases of diarrhoea, fevers, and other maladies. The fruit is, perhaps, the most useful part of the tree. Its pulp is slightly acid and agreeable, and frequently eaten; while the juice is expressed from it, mixed with sugar, and constitutes a drink, which is valued as a specific in putrid and pestilential fevers."—*Hooker, Bot. Mag.* 2792. It delights in rich loamy soil, and cuttings of the large ripened wood strike best in a pot of sand, in a moist heat, under a glass.

digitata White 11, S. Ev. T. 40

ADDER'S-TONGUE. See *Ophioglossum*.

ADÈLIA, *Linn.* The common generic name is taken from the minute parts of fructification, and is derived from *a*, privative, and *delos*, visible. *Linn.* 22, Or. 13, Nat. Or. *Euphorbiaceæ*. Ornamental shrubs, cultivated in peat and loam, and increased from cuttings.

ADINA, *Salisbury*. The name is taken from *adinos*, clustered; on account of the flowers being in heads. *Linn.* 4, Or. 1, Nat. Or. *Cinchonaceae*. The species is a pretty little plant; for culture, &c., see *Nauclera*. *Synonyme*: 1, *Nauclera Adina*.

globiflora 1 Wht. 7, S. Ev. S. 2 China . . 1804

ADLUMIA, *Rafin.* Given in reference to the purplish fringed character of the flowers, *Linn.*

17, Or. 2, Nat. Or. *Fumariaceæ*. This interesting climbing species requires to be supported by stakes; it succeeds well in common soil, and increases readily from seeds sown in a damp situation. *Synonyme*: 1, *Corýdalis fungösa*.

cirrösa 1 . . . Wht. 8, H. Cl. B. 15 N. Amer. 1778

ADNATE, adhering; applied to parts of different whorls adherent one to another, and to anthers when they are attached to the filaments by their whole length.

ADONIS, *Linn.* It is said that this plant sprung from the blood of Adonis when wounded by a boar, alluding to the blood-red colour of the flowers of many of the species. Adonis is stated to have been a great favourite with Venus. *Linn.* 13, Or. 6, Nat. Or. *Ranunculaceæ*. Pretty, free-flowering species; especially *A. vernalis* and *A. autumnalis*, both of which are favourites in the flower-garden. They all succeed well in any common soil; the annual species are easily increased from seeds, and the perennial either from seeds or by dividing the roots. *Synonymes*: 1, *A. miniata*; 2, *A. vernalis*, *Mentzelii*.

ÆCIDIUM, *Pers.* Taken from *aikion*, a wheel, and *eidōs*, like; like pustules. *Linn.* 24, Or. 9, Nat. Or. *Uredinaceæ*. These plants are found upon the leaves of other vegetables, and one of them is known to agriculturists under

the name of red gum. This species usually grows inside the glumes of the calyx, under the epidermis, which, when the plant is ripe, bursts, and emits a powder of a bright orange colour. It does not appear to be materially injurious to the grains. Before the cuticle which covers the fungus bursts, it has much the appearance of a pustule upon the human body, — *Loudon's Ency. of Plants.* — *albescens*, *Alliè*, *Äri*, *Behënis*, *Berberidii*, *Bämi*, *Cälthæ*, *cancelatum*, *confertum*, *cornatum*, *Epilöbii*, *Euphörbia*, *Gerani*, *Grossulariæ*, *Jacobææ*, *laceratum*, *Leguminosarum*, *leucospërmum*, *Menthæ*, *Oröbi*, *Periclymäni*, *Pini*, *Prenänthis*, *Prümula*, *quadrifidum*, *Ranunculacearum*, *Rhämni*, *rubëllum*, *Soldanellæ*, *Tarracaci*, *Thalictri*, *Tussilaginis*, *Urticæ*, *Valerianacearum*, *Violarum*.

ÆGERITA, *Persoon.* Derived from *aigeiros*, a poplar; the species being first discovered on it. *Linn.* 24, Or. 9, Nat. Or. *Mucoraceæ*. Exceedingly minute productions, found generally on dead wood — *candida*, *setösa*.

ÆGICERAS. From *aix*, a goat, and *keras*, a horn. Fruit. *Linn.* 5, Or. 1, Nat. Or. *Myrsinaceæ*. The cultivation is easy; the soil most suitable is a mixture of loam, heath-mould, and sand: and cuttings of the half-ripe wood, root in sand under a glass, in a little heat.

frägrans . . . White 4, G. Ev. S. 6 N. Holl. . 1824

ÆGHIOPS, *Linn.* Goat's eye. Supposed to be useful for a disease of one corner of the eye; hence the name. *Linn.* 23, Or. 1, Nat. Or. *Graminaceæ*. Uninteresting hardy species of grass of the simplest culture. *Synonyme*: 1, *Æ. truncatilis*. — *caudata*, *cylindrica*, *hystrix*, *ovata*, *squarrosa*, *triaristata* 1, *truncatilis*.

ÆGINETIA, *Rozb.* Named in memory of Paul Æginette, a celebrated physician. See *Lipostöma campanuliflora*.

ÆGIPHILA, *Linn.* A favourite of goats, hence the name, *aix*, a goat, and *philos*, dear. *Linn.* 4, Or. 1, Nat. Or. *Verbenaceæ*. Handsome species, delighting in open loamy soil, and propagated from cuttings in sand under a glass in heat.

ÆGLE, *Correa.* The word is from *ægle*, one of the Hesperides. *Linn.* 13, Or. 1, Nat. Or. *Aurantiacæ*. The fragrant flowers of this ornamental shrub (the Bengal Quince) are succeeded by a fruit resembling an orange, which is thus spoken of by Mr. Don. — "The fruit is much larger than that of *Feronia elephantum*, and is very delicious to the taste, and exquisitely fragrant. It is not only nutritious, but possesses an aperient quality which is particularly serviceable in habitual costiveness; it contains a large quantity of exceedingly tenacious transparent gluten, which

may be drawn out when fresh into fine threads, two or three yards in length." From the rind, the Dutch in Ceylon prepare a perfume.

Marmelos . . . Wh. red 4, S. Ev. S. 8 E. Ind. . 1759

ÆGOCHLŌA, Benth. From *aix*, a goat, and *chlōa*, a green herb; alluding to the fetid smell of some of the species. *Linn.* 5, Or. 1, Nat. Or. *Polemoniaceæ*. For culture and propagation, refer to the genus *Gilia*.

ÆSCULUS, *Linn.* The name is given to a kind of oak which bears an edible fruit, and is derived from *esca*, food or nourishment. *Linn.* 7, Or. 1, Nat. Or. *Sapindaceæ*. Showy trees, of considerable magnitude, well adapted for planting singly in parks or lawns, having at all times a pleasing appearance, but more especially when in flower. A deep loamy soil suits them, and they may be increased either by layering, grafting, or budding, and some produce good seed, by which they can be with advantage increased. The bark has been used successfully in intermittent fevers, and with good success in dyeing yellow colours. *Synonymes*: 1, *Calathyrus californica*; 2, *Pavia indica*; 3, *Æ. carnea*.

AGARICACEÆ. A class of fungals resembling the common mushroom (*Agaricus campestris*).

AGÁRICUS, *Linn.* Derived from *Agaria*, the name of a town in Sarmatia. *Linn.* 24, Or. 9, Nat. Or. *Agaricaceæ*. A more extensive genus than this is not known in the whole vegetable kingdom. Some species, as the common mushroom, *A. campestris*, *A. vaginatus*, &c., are well known for the wholesomeness of the food which is prepared from them. Others, as *A. muscarius*, *A. necator*, &c., are very dangerous poisons; indeed, the latter quality exists more or less in so many species, and these resemble those that are wholesome so nearly, as to render it advisable to be exceedingly cautious in the use of any, for the most dreadful effects are well known to have resulted from want of caution in this respect. We shall here briefly notice the cultivation of the common mushroom in houses erected for the purpose, referring the reader for details to *Loudon's Encyclopædia of Gardening*, and other works published on the subject. Collect a sufficient quantity of fresh horse-droppings as free from straw as possible, lay them in an open shed in a heap or ridge; here it will heat violently, and in consequence should be now and then turned for sweetening; after this has subsided to moderation, it will be in a fit state for forming into a bed. In the process of making the bed, the dung should be put on in small quantities, and beat firmly and equally together until it is the required size; in this state let it remain until the highest degree of heat to which it is capable of coming is ascertained, which may be readily done by inserting a heat-stick, and pressing it with the hand: if not found violent, the spawn may be broken up into pieces of two or three inches square, and put

into holes about three inches in depth, by six inches asunder, over its surface: after this throw a very small quantity of well-broken droppings over the whole. In this state let it remain for two or three weeks, when a loamy soil may be put on, about an inch or an inch and a-half thick, and gently patted with the spade. If the temperature of the house be kept about sixty or sixty-five degrees, mushrooms may be expected in six weeks. It is not well to water the beds much, particularly when bearing; it is much better to throw a little water over the path and flues, which will both improve the colour and flavour of the mushrooms without being attended with those bad effects frequently resulting from watering, viz., that of destroying the young stock, and turning brown those already fit for table.

- AGAVE, Linn.** The name has been altered from *agavos*, admirable. Linn. 6, Or. 1, Nat. Or. *Amaryllidacææ*. To this highly interesting genus belongs the *A. americana*, or American aloe. This plant has been said to flower only once in a hundred years, but it is now known to flower sooner or later, according to the treatment it receives. The readiest way to throw it into flower is to apply bottom heat, and treat it as the pine-apple. All the species thrive well in rich loamy soil, mixed with a very little rotten dung, decayed vegetable mould, and brick rubbish; they require but little water, and are propagated by suckers from the root. *Synonymes*: 1, *A. spicata*; 2, *A. lînda*. See *Littæa*.

AGROSTOPHYLLUM, *Blume*. From *agrostis*, grass, and *phyllon*, a leaf; plant, grass-like. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*.

Khasyanum . . . S. Epi. E. Ind. 1838

AGRUMI, a name given to any kind of lemon by the Italians.

AGYNEJA, *Linn.* Possessed of neither style nor stigma, hence the name, from *a*, privative, and *gyne*, a female. *Linn.* 21, Or. 1, Nat. Or. *Euphorbiaceæ*. Uninteresting plants, succeed-

ing in loam, and increased readily from seeds or suckers—*impubes*, *puber*.

AGYRIUM, *Fries*. Derived from *agyris*, a cluster, the species being generally found in crowds or clusters. *Linn.* 24, Or. 9, Nat. Or. *Helvellaceæ*. Curious dot-like productions, appearing like crusty spots upon dead wood—*cæsium*, *rufum*.

AIKFNLA. See *Wahlenbergia*.

AILANTUS, *Willdenow*. Derived from *ailanto*, (tree of heaven). *Linn.* 23, Or. 1, Nat. Or. *Xanthoxylaceæ*. The name of one species in the Moluccas, "*A. glandulosa*, is a tree which may be compared to a gigantic stag's-horn sumach; it has very large leaves, unequally pinnate, with footstalks from one to two feet in length; and numerous flowers in a terminating pedicel, which exhale a disagreeable odour. The tree grows very fast, and on very poor soil, especially if it be calcareous. If the bark be wounded a resinous juice flows out, which hardens in a few days. The wood is hard, heavy, glossy, like satin, and susceptible of a very fine polish. It is propagated by cuttings of the roots. In general with us the trees bear only male flowers, but in France it has produced both male and female flowers, and fruit twice in ten years."—*Loudon's Ency. of Plants*.

excelsa . . . Green 8, H. De. T. 50 E. Ind. 1800
 glandulosa . . . Green 8, H. De. T. 20 China. 1751

AIRA, *Willdenow*. Applied by the Greeks to *Lobium temulentum*, in reference to the deleterious qualities of that plant. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. Grasses of the simplest culture. *Synonymes*: 1, *Phalaris semineutra*.

arundinacea . . . Apetal 6, Grass 1 Cumana . 1817

atropurpurea, *caryophyllæa*, *fœcunda*, *glabrata*, *hùmilis*, *lëndigera*, *pãllens*, *pulchëlla*, *refracta*, *versicolor*.

AIRÖPSIS, *Desvaux*. Named from its resemblance to the genus *Aira*; from *aira*, hair-grass, and *opsis*, like. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. For culture, &c., see *Aira*. *Synonymes*: 1, *Aira brevifolia*; 2, *Poa agrostidea*, *Aira agrostidea*.

brevifolia 1 . . . Apetal 7, Grass 1 Missouri 1818
 Candollei 2 . . . Apetal 7, Grass 1 S. Eur. 1820
 pulchëlla . . . Apetal 3, Grass 1 1831

globbosa, *obtusata*.

AIR-PLANT. See *Aërides*.

AITONIA, *Linn., Junior*. In honour of Mr. William Aiton, the king's head gardener at Kew. *Linn.* 16, Or. 5, Nat. Or. *Meliaceæ*. A pretty and interesting species, thriving well in loam and peat. Cuttings if taken off when young will root in sand, under a glass in heat, if not suffered to remain damp.

capensis . . . Pink 7, G. Ev. S. 2 C. G. H. 1777

AIZON, *Linn.* These plants live under almost any treatment; hence the name is derived from *aiz*, always, and *zoon*, alive. *Linn.* 12, Or. 2, Nat. Or. *Tetragoniaceæ*. Not worth growing, except in botanical collections. For culture, &c., see *Mesembryanthemum*.

JAVA SEED. See *Ptychotis*.

AJOWAN. See *Ptychotis*.

AJUGA, Linn. The derivation of the name is from *a*, privative, and *zugon*, a yoke. *Linn.* 14, Or. 1, Nat. Or. *Lamiaceæ*. These dwarf species have a pretty appearance when in flower, planted near the front of borders, &c. They are easily cultivated, and increased by division or seeds. *Synonymes*: 1, *A. genevensis*, *A. rugosa*.

AKEBIA, Decaisne. From a name one of the species bears in the gardens of Japan. *Linn.* 21, Or. 6, Nat. Or. *Lardizabalaceæ*. See *Rajania*, for culture, &c. *Synonyme*: 1, *Rajania quinata*.

quinata 1 . . . Lil. pink 3, G. Ev. Twi. 10 Chusan . 1845

AKEE-TREE. See *Blighia sapida*.

AKENIUM, an indehiscent pericarp, containing a single seed, which does not adhere to it.

AKI. See *Metrosideros*.

ALANGIUM, Jussieu. Its name in Malabar. *Linn.* 12, Or. 1, Nat. Or. *Alangiaceæ*. Tall ornamental trees, thriving in light sandy loam, or loam mixed with peat. Cuttings strike in sand, in heat, under a glass.

decapetalum . . . Pa. pur. 6, S. Ev. T. 20 E. Ind. . 1779

hexapetalum . . . Purple 6, S. Ev. T. 20 E. Ind. . 1823

ALATERNUS. See *Rhamnus Alaternus*.

ALBÜCA, Linn. The name is given, somewhat injudiciously, to the colour of the flowers, from *albus*, white; only a few of the species having white flowers. *Linn.* 6, Or. 1, Nat. Or. *Liliaceæ*. The species are handsome, and thrive well in sandy loam mixed with a little peat. The suckers from the old bulb, or leaves taken off with a scale from the old bulb, will produce young plants. *Synonymes*: 1, *Anthericum exuviatum*; 2, *A. fragrans*.

ALBUMEN, the substance under the inner coat of the testa of seeds, surrounding the embryo.

ALBURNUM, the young wood before it comes to a proper consistence.

ALCHEMILLA, Linn. The word is from *Alkemelyeh*, its Arabic name. *Linn.* 4, Or. 1, Nat. Or. *Sanguisorbaceæ*. Many of the species are ornamental, and well adapted for planting near the front of borders, or for adorning rock-work. They succeed well in any common soil, if not over-wet, and may be increased by seeds or division. *A. vulgaris* is astringent, and slightly tonic. *Synonymes*: 1, *A. arvensis*, *Aphanes arvensis*; 2, *Alchemilla montana*. See also *Thesium*.

Aphanes 1, *cornucopioides*.

ALCINA, Cavanilles. Named in honour of Fr. Ign. Alcina, a Spanish naturalist. *Linn.* 19, Or. 4, Nat. Or. *Asteraceæ*. A species of little interest and easy cultivation—*perfoliata*.

ALCYONIDIUM, Agardh. So called, from *Halcionion*, the foam of the sea, among which the plants referred to this genus are naturally produced. *Linn.* 24, Or. 7, Nat. Or. *Diatomaceæ*. This also is supposed to be the nidus of some animalculæ. Lamouroux, who originally fixed it here, afterwards referred it to Zoophytes; in which last opinion Gaillon agrees with him, declaring that he has actually seen the animalculæ nesting in it. D'Orbigny and Ellis consider it the ova of a testaceous animal. *defractum, diaphanum, flavescens*.

ALDER. See *Alnus*.

ALDROVANDA, Linn. In honour of Ulysses Aldrovandus, an old Italian botanist. *Linn.* 5, Or. 5, Nat. Or. *Droseraceæ*. We refer for culture, &c., of this curious little aquatic, to *Actinocarpus*.

vesiculosa . . . Whit. 7, H. Aq. P. floa Italy . . 1823

ALEOCOST OR COSTMARY. See *Balsamita*.

ALECTORIA, Acharius. The name is derived from *alektor*, unmarried, because of the uncertainty respecting the male flowers. *Linn.* 24, Or. 8, Nat. Or. *Parmeliaceæ*. *A. jubata* occasionally supplies the rein-deer with food; for which purpose the Laplanders cut down the trees, that the lichen may be devoured from the topmost branches.—*jubata, chalybiiformis, sarmentosa*.

ALEMBA, a vessel acting like a still.

ALËTRIS, Linn. The whole plant appears covered with a powdery dust; hence the propriety of the name, from *Aleton*, meal. *Linn.* 6, Or. 1, Nat. Or. *Hæmodoraceæ*. Interesting species, delighting in a shady situation, and

peat or leaf soil. They are increased from offsets. *A. farinosa* has bitter roots, which act as a tonic and stomachic given in small doses, but a mixture of twenty grains produces much nausea, with a tendency to vomit. *Synonymy*: 1. *A. alba*.

atrea . . . Yellow 7, H. Her. P. $\frac{1}{2}$ N. Amer. . 1811
farinosa 1. . . White 6, H. Her. P. $\frac{1}{2}$ N. Amer. . 1768

ALEURITES, *Forster*. Derived from *aleurites*, mealy; in allusion to the farinaceous substance with which the whole plant is covered. *Linn.* 21, Or. 10, Nat. Or. *Euphorbiaceæ*. Handsome plants, succeeding well in loamy soil, and increased from ripe cuttings with the leaves left on, in a pot of sand, in heat, under a glass.

cordata . . . Apetal 4, S. Ev. Tr. 10 Japan . . 1818

ALISMACEÆ, a natural order of very pretty water plants, principally with white flowers, occupying ditches both in temperate and tropical climates.

ALISMORCHIS. See *Calánthe*.

ALKALI, any substance which mingled with acid produces fermentation.

ALKANET. See *Anchusa tinctoria*.

ALLAMANDA, *Willdenow*. Named in memory of Dr. Frederic Allamand, professor at Leyden. *Linn.* 5, Or. 1, Nat. Or. *Apocynaceæ*. This handsome and free-flowering genus delights in rich loamy soil, and may be multiplied freely from cuttings in sand in moist heat. An infusion of the leaves makes a valuable cathartic. *Synonymy*: 1, *A. Linnaei*; 2, *Nerium tinctorium*.

ALMOND. See *Amigdalus*.

ALMEIDEA, St. Hil. In honour of J. R. P. de Almeida, a friend of M. St. Hilaire. *Linn.* 5, Or. 1, Nat. Or. *Rutaceae*. Stove shrubs, growing in sandy loam and peat, and increased by cuttings under a glass in heat.

rubra . . . Crim. red 9, S. Ev. S. 5 Brazil . . . 1849

ALNUS, Tournfort. Compounded from *al*, near, and *lan*, the edge of a river; in allusion to the situation where the species grow. *Linn.* 21, Or. 4, Nat. Or. *Betulaceae*. Timber trees, thriving best in very moist situations. The wood is employed for under-water purposes, turnery, &c.; the sap is yellow. They are propagated by layers or seeds, and the bark possesses the tanning principle in a considerable degree. *Synonyme*: 1, *Betula ovata*.

ALOË, Linn. Derived from *alloseh*, the Arabic name for this genus. *Linn.* 6, Or. 1, Nat. Or. *Liliaceae*. Very interesting and curious succulent plants, thriving well in open sandy

loam and peat, mixed with a little reduced manure; the pots must be well drained and the plants cautiously watered, especially in winter. They increase by suckers, or leaves laid on, or very slightly planted in a pot of mould. *Socotrine aloes* are principally obtained from *A. spicata* and *A. socotrina*. *Synonymes*: 1, *A. humilis*; 2, *A. mitrasiformis*; 3, *A. humilis, incurva*; 4, *A. picta*; 5, *A. striata*; 6, *A. barbadensis*. See *Apicra, Haworthia, Pachidendron, Phylloma*, and *Rhipidodendron*.

ALOE-WOOD, or LIGN ALOES. See *Aquilaria*.

ALÖMIA, Kunth. The name is gathered from *a*, privative, and *loma*, a fringe. *Linn.* 19, Or. 1, Nat. Or. *Asteraceae*. An ornamental dwarf evergreen; grown in sandy loam, and increased from cuttings.

ageratoides . . . White 7, F. Ev. P. 1 † N. Spain 1824

ALÖNA, Lindley. Primitive name, *Nolana*—letters transposed; from *nola*, a little bell.

Linn. 5, Or. 1, Nat. Or. *Nolanaceæ*. Fine shrubby plants allied to *Nolana*, bearing large sky blue flowers. Ordinary greenhouse treatment is only required; and *A. cælestis* is a useful and showy plant for bedding out in the flower garden.

<i>baccata</i> . . .	Yellow	7, G. Ev. S. 2	Coquimbo

agræstis, *bulbosus*, *echinatus*, *fælvus*, *geniculatus*, *ramosus*, *utriculatus*, *ventricosus*.

ALOÛSIA, *Ortega*. Named in compliment to Maria Louisa, Queen of Spain, by Don Antonio Palan, botanist at Madrid. *Linn.* 15, Or. 2, Nat. Or. *Verbenææ*. Justly esteemed for its citron-scented leaves, with which most people are acquainted. Rich mould suits it, and young cuttings strike freely in sandy soil. *Synonyme*; 1, *Verbena triphylla*.

<i>citriodora</i> . . .	Pa. pur.	8, G. De. S. 3	Chile . . . 1794
-------------------------	----------	----------------	------------------

ALPINE BROOK PLANT. See *Saxifraga rivularis*.

ALPINA, *Linn.* In memory of Prosper Alpini, an Italian botanist. *Linn.* 1, Or. 1, Nat. Or. *Zingiberææ*. These handsome species, to succeed well, require rich sandy soil, and to be grown at large in a hot humid atmosphere. They are increased by divisions at the roots. The root or rhizoma of *A. racemosa* and *Galanga*, are aromatic. *Synonymes*; 1, *Cardamum medium*; 2, *A. bracteata*.

ALSTREMERIA, *Linn.* Named in honour of Baron Claudius Alstromer, a Swedish botanist. *Linn.* 6, Or. 1, Nat. Or. *Amaryllidææ*. The species of this beautiful genus, Sweet observes, "thrive best in a mixture of full one-third sand, rather more than a third of turfy loam, and the rest turfy peat; several species succeed well out in the open air, planted about six inches deep, by the side of a south wall, in sandy soil." The stove species also succeed well in the same compost; they are increased

by dividing the roots, or by seeds, which must be sown as soon as ripe. *A. Ligtu* is delightfully fragrant. *A. Salsilla* is diaphoretic and diuretic. From *A. pallida* a kind of arrowroot is prepared in Chile. *Synonymes*: 1, *Bomaria acutifolia*; 2, *B. Caldasiæna*; 3, *B. edulis*; 4, *A. Hookeri*; 5, *A. Stmsii*; 6, *Bomaria edulis*; 7, *B. oculata*; 8, *A. versicolor*.

ALTERNANTHÈRA, *R. Brown*. The name refers to the stamens being alternately fertile and barren. *Linn.* 5, Or. 1, Nat. Or. *Amarantaceæ*. The biennial species of this interesting genus should be sown on a gentle heating hot-bed, in peaty soil. The stove and greenhouse species succeed well in any light rich soil, and propagate freely from cuttings. *Synonymes*: 1, *A. axillaris*.

ALTERNATING, alternate with anything mentioned.

ALTHEA, *Linn.* Derived from *altheo*, to cure; from the medicinal qualities of some of the species. *Linn.* 16, Or. 8, Nat. Or. *Malvææ*. Tall free-flowering plants: the biennial and annual kinds should be sown in the open border in spring, and transplanted when sufficiently strong. The herbaceous kinds may be increased by dividing the roots, or by seeds. *A. rosea*, the parent of the many beautiful varieties of Hollyhock, yields a blue colouring matter equal to indigo. *Synonymes*: 1, *A. leucantha*; 2, *A. grandiflora*.

ALTINGIA, *Noronha*. Named in memory of Altung, a worthy German botanist. *Linn.* 22, Or. 13, Nat. Or. *Pinacææ*. These handsome growing trees attain a great magnitude and height, especially *A. excelsa*, which averages one hundred feet; they prefer deep loamy soil; and young plants may with care be struck from portions of the fully-ripened wood taken off at the joints, and planted in a pot of sand, under a glass, but not plunged or exposed to the sun. Seeds, when such can be obtained, produce the best plants. *Synonymes*: 1, *Araucaria excelsa*.

Cunninghami Aptl. 5, G. Ev. T. 100 N. Holl. 1824
excelsa 1 Aptl. 5, G. Ev. T. 100 Norfolk Is. 1796

ALTISSIMA, tallest, highest.

ALUM ROOT. See *Heuchera* [comb. ALVEOLATE, having the appearance of honey-ALVINE, belonging to the intestines.

ALYSICARPUS, *Necker*. Derived from *alysis*, a chain, and *karpus*, a fruit; in allusion to the chain-like appearance of the legume. *Linn.* 17, Or. 4, Nat. Or. *Fabacææ*. Plants of the simplest culture. *Synonymes*: 1, *Hedysarum bupleurifolium*, *gramineum*; 2, *H. nummularifolium*; 3, *H. styracifolium*; 4, *H. vaginale*.

ALYSSUM, *Linn.* Derived from *aly*, privative, and *lyssa*, rage; from a notion among the ancients of the plant possessing the power of allaying anger. *Linn.* 15, Or. 1, Nat. Or. *Brassicææ*. These neat and interesting species are well adapted for ornamenting rock-work, or the front of flower-beds. They increase readily either from seeds, cuttings, or divisions, and grow well in any common soil. *Synonymes*: 1, *Røniga maritima*; 2, *A. alpestre*.

albus, angustifolius, Berchtoldii, Blitum, bulbatus, campestris, caniflorus, chlorostachys, curvifolius, deflexus, gangeticus, gigantæus, gracilis, 1; græcæans, hybridus, inamœnus, incœmum, interruptus, lætus, lineatus, lividus, mangostanus, pallidus, parisiensis, persicarioides, polygamus, polygonoides, polystachys, prostratus, pumilus, retroflexus, rigidus, scandens, speciosus, spicatus, spinosus, strictus, sylvestris, tenuifolius, tristis, viridis, zanënsis.

AMARYLLIDACEÆ. An order of beautiful bulbous plants which have excited admiration in all ages.

AMARYLLIS, Linn. The name of a nymph celebrated by the poet Virgil. *Linn.* 6, Or. 1, Nat. Or. *Amaryllidaceæ*. This interesting and beautiful genus of bulbous plants may be successfully grown in the following manner:—The bulbs of the stove species should be turned out of the pots in autumn, and laid on a shelf or other dry place till spring, when they should be potted and introduced into the hothouse, giving them, as they progress, plenty of water. *A. reticulata* and *striatifolia* will not bear turning out, but flower better by remaining in their pots all the year. The greenhouse species must also be turned out of the pots and dried, and in the spring potted, and encouraged to flower. The soil should comprise equal portions of turfy loam and peat, with a fair quantity of sand; the pots should be drained well. They are increased by offsets from the bulbs. *Synonymes*: 1, *Hippêstrum aulicum*; 2, *Allium caspium, Crinum caspium*; 3, *Sprekëlia formosissima*; 4, *Sphærotèle coccinea, Phycëlla ighea*; 5, *Crinum latifolium*; 6, *A. spectabilis*; 7, *A. acuminata*; 8, *Hippêstrum robustum*; 9, *A. AMASONIA, Linn. In memory of Thomas Amason, an American traveller. *Linn.* 14, Or. 2, Nat. Or. *Verbenaceæ*. These are interesting plants, and may be successfully grown in sandy loam, and increased from suckers. *Synonymy*: 1, *Taligalia campestris*.
erecta 1 . Yellow . 9, S. Her. P. 1½ Maranhao . 1823
punicea . Yel. scar. 9, S. Her. P. 1½ Trinidad . 1825

AMA-TSIA. See *Hydrangea*.

AMBERBODA, De Candolle. *Linn.* 19, Or. 3, Nat. Or. *Asteraceæ*—*spectabilis*. See *Centaurea*.

AMBER TREE. See *Anthospermum*.

AMBERGLÓTTIS or AMBYGLÓTTIS. See *Callithea*.

AMBIGUOUS, doubtful or uncertain.

AMBLIURON, Raf. *Linn.* 6, Or. 1, Nat. Or. *Liliaceæ*. See *Fritillaria*.

AMBRÓSIA, Linnæus. A poetical name, expressive of the food of the heathen gods. *Linn.* 21, Or. 5, Nat. Or. *Asteraceæ*. Uninteresting species of the simplest culture. *Synonymy*: 1, *A. absinthifolia*—*artemisiæfolia*, *cumanense*, *elætiar*, *heterophylla* 1, *integrifolia*, *maritima*, *paniculata*, *trifida*.

AMBROSINIA. Named in honour of *B. Ambrosini*, Curator of the Botanic Garden, Bologna. *Linn.* 21, Or. 2, Nat. Or. *Aracææ*. A hardy herbaceous plant requiring the same treatment as *Arum*. *Synonymy*: 1, *Arum proboscædium*.

Béssii 1 . . Grn. pur. 5, H. Her. P. 1 S. Eur. . 1823

AMELÁNCHIER, Medicus. According to Clusius, this is the only Savoy name for the Medlar. *Linn.* 12, Or. 2, Nat. Or. *Pomacææ*. These ornamental free-flowering bushes, make a gay display when standing in the distant part of pleasure-grounds. For culture &c., see *Cotoneaster*. *Synonymes*: 1, *Mespilus canadensis*, *Pýrus sanguinea* ; 2, *Mespilus Amelanchier*.

AMENTACEÆ. Exogenous plants bearing flowers in catkins, and divided by some modern botanists into six orders—called *Casuarinaceæ*, *Betulaceæ*, *Altingiaceæ*, *Salicaceæ*, *Myricaceæ*, and *Elæagnaceæ*.

AMENT, } A catkin mode of inflorescence; as
AMENTUM, } the Hazel and Willow.

AMENTALES. See *Amentaceæ*.

AMERICAN ALMOND. See *Brabejum*.

AMERICAN ALOE. See *Agave americana*.

AMERICAN CHINA ROOT. See *Smilax*.

AMERICAN COWSLIP. See *Dodecatheon*.

AMERICAN CRANBERRY. See *Oxycoccus macrocarpus*.

AMERICAN CRESS. See *Barbarea præcox*.

AMERICAN EBONY. See *Amerinum Ebenus*.

AMERICAN GAMBOGE. See *Hypéricum baccatum*.

AMERICAN MARMALADE. See *Achras mammosa*.

AMERINNUM, *Patrick Browne*. A Greek name

for the house-leek; derived from *a*, privative, and *merinna*, care; in allusion to the little attention the plant requires. *Linn.* 16, Or. 6, Nat. Or. *Fabaceæ*. Ornamental shrubs. *Synonymes*: 1, *Pterocarpus Amerinum*; 2, *Brya Ebenus*, *Pterocarpus glabra*, *P. buxifolius*, *Aspalathus arboræscens*; for culture &c., see *Pterocarpus*.

Brown 1 . . . White . 5, S. Ev. S. 10 W. Ind. . 1793

AMETHYSTEA, *Willdenow*. The name is given in allusion to the colour of the flowers, from *amethystus*, the amethyst. *Linn.* 2, Or. 1, Nat. Or. *Lamiaceæ*. A pretty blue-flowered annual; it grows in peaty soil, and produces abundance of seed.

cerulea . . . Blue . 7, H. A. 1½ Siberia . 1759

AMETHYSTINOUS, violet-coloured.

AMHÉRSTIA, *Wallich*. In honour of the Rt. Hon. Countess Amherst and her daughter Lady Sarah Amherst; the zealous friends and promoters of every branch of Natural History, but especially Botany. *Linn.* 17, Or. 4, Nat. Or. *Fabaceæ*. This truly noble object first became known to Dr. Wallich through the medium of a Mr. Crawford, in August, 1836, who originally discovered it near Martaban, in the E. Indies; the former gentleman afterwards found it, as he himself states, "growing near a decayed Kioum (a sort of monastery) together with numerous individuals of *Jonesia Asoca* and *Mesua férrea*"; it was profusely ornamented with pendulous racemes of large vermilion-coloured blossoms, unequalled in the flora of the E. Indies, and perhaps not surpassed in magnificence and elegance in any part of the world."—*Wallich's Plantæ Asia-*

ticeæ Rariores. The ground, he states, was strewed even at a distance with its flowers, which are daily offered to the images in the adjoining caves. He transported it to the Botanic Garden, Calcutta, where it was seen by Mr. J. Gibson, plant collector for the Duke of Devonshire, who very fortunately succeeded in bringing a plant alive to the collection at Chatsworth. It delights in a rich strong loam, and may be propagated by cuttings of the half-ripened wood, planted in sand, under a glass, in heat, by ringing the stems of the old plant, or by seeds.

nobilis . . . Rich ver. 5, S. Ev. T. 40 E. Ind. . 1837

AMLIANTHIUM, *Gray*. *Linn.* 6, Or. 3, Nat. Or. *Melanthaceæ*. See *Heldnias*.

AMICIA, *Humboldt and Bonpland*. In memory of J. B. Amici, a noted physician. *Linn.* 16, Or. 6, Nat. Or. *Fabaceæ*. This interesting evergreen climber delights in open loamy soil, and increases readily from cuttings.

zygomeris . . Yellow 6, S. Ev. Cl. 10 Mexico . 1826

AMRÒLA, *Persoon*. Derivation unknown. *Linn.* 21, Or. 9, Nat. Or. *Sapindaceæ*. An ornamental tree, thriving in peat and loam, and increased by cuttings. *Synonyme*: 1, *Lagunea nitida*.

nitida 1 . . . S. Ev. T. 24 Peru . 1824

AMMÁNIA, *Linn.* In honour of John Ammann, a physician and botanist at St. Petersburg. *Linn.* 4, Or. 1, Nat. Or. *Lythraceæ*. Species of no beauty; for culture, &c., see *Balsamina*.

verticillata . White 8, H. A. 1 Guinea . 1819

cegyptiaca, *auriculata*, *baccifera*, *caspica*, *débilis*, *diffusa*, *humilis*, *latifolia*, *multiflora*, *octandra*, *pentandra*, *racemosa*, *ramdiosa*, *rotundifolia*, *rubra*, *sanguinolenta*, *viridis*, *Wormskiddii*.

AMMI, *Linn.* The plant delights to grow in sandy places, hence the name from *ammos*, sand. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. Weeds of the simplest culture. *Synonymes*: 1, *Bunium acaille*. *acaille* 1, *anethifolium*, *Boeberi*, *daucifolium*, *ferulefolium*, *glaucofolium*, *majus*, *Visnaga*.

AMMOBIUM, *R. Brown*. Derived from *ammos*, sand, and *bio*, to live; in reference to the situation where the plants grow. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. Pretty species of the easiest culture.

alatum . . . White 6, F. Her. P. 2 N. Holl. . 1822

AMOSA. See *Inga*.

AMPELODESOS, *Kth.* *Ampelos*, a vine, and *desmos*, a bond. *Linn.* 3, Or. 2, Nat. Or. *Graminaceae*. See *Arundo*.

AMPELOPRASUM. See *Allium Ampeloprasum*.

AMPELOPSIS, *Michaux.* These plants resemble the vine; hence the name from *ampelos*, a vine, and *opsis*, resemblance. *Linn.* 5, Or. 1, Nat. Or. *Vitaceae*. This genus of interesting plants comprehends the Virginian creeper, so well known for its adaptation to cover walls, bowers, and trellis-work. They grow in common soil, and increase from layers or cuttings. *Synonymes*: 1, *Cissus ampelopsis*; 2, *C. quinquefolius*.

bipinnata . Pur. grn. 8, H. De. S. 15 N. Amer. 1700
cordata 1 . . . Pur. grn. 5, H. De. Cl. 20 N. Amer. 1803

AMPHICARPUS, round-fruited.

AMPHICORDA, *Fries.* Compounded from *amphis*, signifying on either or each side, and *chorda*, a chord. *Linn.* 24, Or. 9, Nat. Or. *Mucoraceae*. A dusty or porous substance, found on rotten trunks under ground in the autumn—*farinacea*.

AMPHICOME, *Royle.* From *amphi*, around, and

kome, hair; in allusion to the structure of the seeds. *Linn.* 14, Or. 2, Nat. Or. *Bignoniaceæ*. These are very elegant and rather slender species, quite hardy enough to stand out if planted in dry situations or on rock-work, provided they are protected during winter from wet and most severe frosts. They thrive best in loamy soil mixed with a little sandy peat, and may be increased by seeds or cuttings of the young shoots. *Synonyme*: 1, *Incarvillea Emodi*.

arguta . . . Lilac . . . 3, F. Ev. P. 1 Himalaya . 1837
Emodi 1 . . . Rose 8, G. Ev. S. 1 India . . . 1852

AMPHILOPHIUM, *Kunth*. Derived from *amphilophos*, crested on all sides; the limb of the corolla is very curled. *Linn.* 14, Or. 2, Nat. Or. *Bignoniaceæ*. Pretty greenhouse climbers; for culture, &c., see *Bignonia*. *Synonyme*: 1, *Bignonia paniculata*.

paniculatum 1. Purple . . . 6, S. Ev. Cl. 6 W. Ind. 1738
Mutisii . . . Rose . . . 6, S. Ev. Cl. 6 N. Gren. 1860

AMPHIPOGON, *R. Brown*. Compounded from *amphi*, round, and *pogon*, a beard. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. A curious species of grass of the easiest culture.

strictus . . . Apetal . . . 6, Grass . . . 2 New Holl. 1823

AMPHISPORIUM, *Link*. Compounded from *amphi*, on either or each side, and *sporia*, a sporule. *Linn.* 24, Or. 3, Nat. Or. *Mucoraceæ*. Yellow particles observable on hyacinths grown in glasses—*versicolor*.

AMPHODUS. See *Kennedyæ*.

AMPLEXICAULIS, stem-clasping.

AMSIŃKIA, *Lehmann*. Named after M. Amsinck.

Linn. 5, Or. 1, Nat. Or. *Boraginaceæ*. The seeds of these plants only require to be sown in the open ground, about the beginning of May, in a dry, warm, sheltered situation. They are scarcely worthy of cultivation, except in botanical gardens, or where a collection rather than a selection is grown. *A. angustifolia*, *intermedia*, *lycopsoïdes*, *spectabilis*.

AMSONIA, *Walter*. In memory of Charles Amson, a traveller in America. *Linn.* 5, Or. 1, Nat. Or. *Apocynaceæ*. Pretty species, succeeding well in common soil, and increased freely from cuttings under a glass, or by dividing the roots. *Synonyme*: 1, *Tabernaemontana Amsonia*.

angustifolia . . . Blue . . . 6, H. Her. P. 2 N. Amer. 1774

AMYGDALUS, *Linn*. Derived from *amysso*, to lacerate; in allusion to the fissured shell. *Linn.* 12, Or. 1, Nat. Or. *Drupaceæ*. The tall and coarse portion of these ornamental early-flowering plants may be advantageously disposed of in large plantations, and the dwarf kinds in small shrubberies at the front of the large ones. The common way of increasing them is by budding on the plum stock, or on the bitter almond. Rich mould is a proper medium for them. They are most valued for producing their showy pink blossoms early in the season, sooner than almost any other shrubs. *Synonymes*: 1, *Prunus prostrata*; 2, *P. sinensis*. See *Persica*.

AMYLLACEOUS, possessing the properties of starch.

AMYRIDACEÆ. A natural order divided from *Terebinthaceæ*—consisting of plants bearing a fragrant gum, used under the names of Myrrh and Frankincense.

AMYRIS, *Linn*. From *a*, intensive, and *myron*, balm, or *myrrha*, myrrh; in allusion to the strong perfume of the species. *Linn.* 8, Or. 1, Nat. Or. *Amyridaceæ*. Ornamental trees, succeeding well in an equal mixture of loam and peat, and are propagated from cuttings in sand under a glass. *A. toxicifera* is poisonous. *Synonymes*: 1, *A. elemifera*; 2, *A. balsamifera*. See *Balsamodendron*, *Duvalia*, *Icica*, *Schinus*.

ANACAMPPTIS, *Richard*. Named from *anacampo*, to turn back; in allusion to the reflexed state of the pollen masses. *Linn.* 20, Or.

1, Nat. Or. *Orchidaceæ*. An interesting native species, very similar to the orchis; cultivation simple. *Synonyme*: 1, *Orchis pyramidalis*. pyramidalis . Red . 7, H. Ter. 1½ Britain, dr. pa.

ANACANTHUS, spineless.

ANACARDIACEÆ, a considerable order of ornamental trees and shrubs; some, as the mango, spondias, and others, bear eatable fruit, and others are esteemed for the production of gum resins of much request for varnishes and dyes.

ANACARDIUM, *Roxburgh*. The name refers to the form of the nut; hence the derivation from *ana*, like, and *kardia*, heart. *Linn.* 23, Or. 2, Nat. Or. *Anacardiaceæ*. These ornamental trees thrive in light loamy soil; and cuttings with their leaves on, taken from the ripe wood, will strike in sand, in heat, under a glass. *A. occidentale* is thus spoken of by Mr. Sander:—"This elegant tree, bearing panicked corymbs of sweet smelling flowers, succeeded by an edible fruit of the pomme kind, of a yellow or red colour. This fruit or apple has a sub-acid flavour, with some degree of astringency." See *Semecarpus*.

occidentale . Grn. red. . S. Ev. T. 12 W. Ind. . 1699
indicum . Grn. red. . S. Ev. T. 12 E. Ind. . 1699

ANÁCHARIS, *Rich.* *Ana*, without, *charis*, beauty. *Linn.* 22, Or. 3, Nat. Or. *Hydrocharidaceæ*. An introduced plant, aquatic, increasing so rapidly that, where it establishes itself, it becomes a very troublesome weed. The plant is not unlike a Potamogeton.

alsinistrum . Grn 7, H. Tu. P. floa. Britain, ponds

ANACYCLUS, *Linn.* Derived from *an*, privative, *anthos*, a flower, and *kyklos*, a circle; in allusion to the rows of ovaries placed round the disk. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. Hardy annuals requiring only to be sown in the open ground. *Synonymes*: 1, *Santolina anthemoides*; 2, *Anthemis valentina*; 3, *A. Pyrethrum*.

ANAGALLIS, *Tournefort*. The power of removing despondency is attributed to this genus, hence the name from *anagelao*, to laugh. *Linn.* 5, Or. 1, Nat. Or. *Primulaceæ*. Very pretty interesting species, of easy culture. Sow the hardy annuals in the open ground, and the biennials in pots in the greenhouse or a frame, and plant them out when strong enough. They increase from cuttings planted in any common

soil under a glass. Orfila destroyed a dog by making him swallow three drachms of the extract of *A. arvensis*. *Synonymes*: 1, *A. phœnicea*; 2, *A. collina*.

Garden varieties.—These are numerous, and some of them very beautiful, principally raised from *A. grandiflora*.

ANAGYRIS, *Tournefort*. Named in allusion to the curved pod; from *ana*, backward, and *gyros*, a circle. *Linn.* 10, Or. 1, Nat. Or. *Fabaceæ*. Ornamental trees, growing in peat and loam, or any light rich soil, and multiplied from cuttings or seeds. The seeds of *A. fetida*, if eaten in any quantity, produce headache. *Synonyme*: *Baptisia nepalensis*. See *Macrotropus*, *Piptanthus*.

ANANÁSSA, *Thunberg*. From *nanas*, the Guiana name. *Linn.* 6, Or. 1, Nat. Or. *Bromeliaceæ*. The plants that yield this very superior fruit, so much esteemed for its sweet aromatic flavour, were first cultivated in this country at Sir Matthew Dicken's, at Richmond, where fruit was first produced in 1715. There are now a great many distinct kinds described in our garden lists: of these only a few are worthy of extensive cultivation—such as the common broad-leaved Queen, Ripley Queen, Lemon Queen, Black Jamaica, New and Old Providence, Antigua, Montserrat, Cayenne, Rothschilds, and a few others. The methods of cultivation are various, but pot culture as practised for so many years is now almost everywhere superseded by bedding out, which is much less trouble, and also furnishes larger fruit in a shorter space of time. By this system, young plants are merely planted in a bed composed of open sandy loam well charred by a wood fire, and mixed with a small portion of deer's dung, sheep's dung, or very rotten horse dung. The bed is heated by hot-water pipes passing through a hot-air chamber beneath, and of sufficient power to supply the soil with a heat of 75 or 80 degrees. There must also be sufficient surface-pipes to perfectly heat the air of the house or pit. In fine weather admit air the first thing in the morning (say seven o'clock), and close the house early in the afternoon (say three o'clock); when the paths should be watered and the plants

syringed over the tops, which will cause the atmosphere to be very moist; in this state the plants will thrive surprisingly. Fruiting plants must not be grown in an over-moist atmosphere, but should have, when such can be given, a freer circulation of air, or the fruit will be of an inferior flavour. The temperature in winter should be 70 or 75 degrees, in summer 80 or 85 degrees, and when closed in the afternoon 100 or 110 degrees. The best plants are obtained from suckers, but new or very rare sorts are also obtained from the crown of the fruit. After the fruit is cut, the stools should still continue in a good bottom-heat, and strong suckers equal to year-old plants may be soon taken off. *Synonymes*: 1, *Bromelia lucida*; 2, *B. Anãnas*.

ANASTÁSICA, *Linn.* This plant, however dry, will recover its original form if immersed in water; hence the name from *anastasis*, resurrection. *Linn.* 15, Or. 1, Nat. Or. *Brassicaceæ*. Rose of Jericho. A curious dwarf species, of easy culture.

hierochuntina White . 7, F. A. ½ Levant . 1597

ANASTOMOSING, uniting of vessels, veins, or nerves.

ANATHÉNUM, *Palisot de Beauvois*. Named in allusion to the awnless valves of the calyx, from *a*, privative, and *anther*, awn. *Linn.* 23, Or. 1, Nat. Or. *Graminaceæ*. Uninteresting species, of easy culture. *Synonymes*: 1, *Andropogon muricatus*, *squarrosus*; 2, *A. muticum*—*A. muricatum* 1, *muticum* 2, *virginicum*.

ANATOMICUM, dissected, lacinated.

ANAXÉTUM, *De Candolle*. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*—arborescens. See *Gnaphalium*.

ANCEPS, two-edged.

ANCHIETEA, *Hill*. In memory of P. Anchieta, a Brazilian writer on plants. *Linn.* 5, Or. 1, Nat. Or. *Violaceæ*. An ornamental species; for culture, &c., see *Calyptrium*. *Synonyme*: 1, *Calyptrium pyriforme*.

pyrifolia 1 . . . White . 7, S. Ev. Cl. 6 Brazil . 1822

ANCHOMANES, *Schott*. Name not explained. *Linn.* 21, Or. 7, Nat. Or. *Araceæ*. A very remarkable araceous plant, requiring similar treatment to the stove *Caladiums*. *Synonymes*: 1, *Caladium petiolatum*.

Hodkeri pallida 1 Gn. pur. S. Tu. P. Fern. Po 1862

ANCHOVY-PEAR. See *Grias cauliflora*.

ANCHUSA, *Linn.* *A. tinctoria* was anciently used for staining the skin; hence the name, from *agchoresa*, paint for the skin. *Linn.* 5, Or. 1, Nat. Or. *Boraginaceæ*. The hardy annual and biennial species of this ornamental genus succeed well sown in the open borders. *A. capensis* should be raised in a frame, and treated as a greenhouse plant. The roots of *A. tinctoria* and *virginica* furnish a reddish-brown substance used by dyers. *Synonymes*: 1, *Myosotis obtusa*; 2, *A. angustifolia*; 3, *Myosotis macrophylla*; 4, *A. zeylanica*. See *Arnebica*, *Cynoglossum*, *Lithospermum*, *Lycopsis*, *Nönea*, *Omphalodes*.

Agårdhii, *lycopsoides*, *sempervirens*.

ANCISTROCARPUS. See *Micrötea*.

ANCISTRUM, *Kth*. From *ankistron*, a hook, in allusion to the segments of the calyx terminating in hooks. Herbaceous plants of no floral beauty. *Linn.* 2, Or. 1, Nat. Or. *Sanguisorbaceæ*.—*Sanguisorba ovalifolium*, *argenteum*, *ascendens*, *laevigatum*, *lucidum*, *magdalenicum*.

ANDERSONIA, *R. Brown*. In memory of Messrs. W. A. W. and G. Anderson, great promoters of Botany. *Linn.* 5, Or. 1, Nat. Or. *Epacridaceæ*. A very pretty species, multiplied from portions of the young shoots, in sand, under a glass, and grown in sandy peat soil carefully watered.

sprengelioides Pink . 6, G. Ev. S. 2 N. Holland . 1803

ANDIRA, *Lamarek*. Its Brazilian name. *Linn.* 17, Or. 4, Nat. Or. *Fabaceæ*. Large orna-

mental trees; for culture, &c., see *Geoffroya*.
Synonymes: 1, *Geoffroya inermis*; 2, *G. racemosa*.

inermis 1. Purple. S. Ev. T. 8 W. Ind. . 1773
racemosa 2. Purple. S. Ev. T. 8 Trinidad . 1818

ANDRACHNE, *Linn.* The name of the Purslain in Greece. *Linn.* 21, Or. 10, Nat. Or. *Euphorbiaceæ*. Bastard Orpine. A weed, of simple culture—*telephioides*.

ANDRÆA, *Hedwig*. Named in honour of J. G. R. Andræ, a German professor. *Linn.* 24, Or. 5, Nat. Or. *Andræaceæ*. This remarkable genus differs from all other mosses, in having a capsule, which splits into four valves, cohering at their ends by means of the persistent lid; it agrees with *Sphagnum* in having no footstalk, but in its room an elongated receptacle, and appears to be a transition from *Andræaceæ* to *Hepaticæ*. This is, however, only apparent. All the species are natives of rocks or mountains, and are remarkable for their nearly black, or dark-brown colour.—*Loudon's Encyclopaedia of Plants—alpina, nivâlis, Rôthii, rupëstris*.

ANDRÆACEÆ. A small order of mosses, natives of cold and temperate regions, often found in the bleakest places, near the limits of perpetual snow. They are usually termed *split mosses*, because the spore cases open by valves without elaters.

ANDRÔGYNOUS, producing male and female flowers on the same plant, or on the same spike, or head.

ANDRËOSKIA, *Decandolle*. In memory of Ant. Andrzejowski, a Russian botanist. *Linn.* 15, Or. 1, Nat. Or. *Brassicææ*. Mere weeds, of the simplest culture. *Synonymes*: 1, *Sisymbrium Sieversianum*; 2, *S. integrifolium*; 3, *S. pinnatulum*, *Hesperis pinnata*; 4, *Cheiranthus pinnatifidus*,—*eglandulosa*, 1; *integrifolia*, 2; *pinnata*, 3; *pinnatifida*, 4.

ANDROCÛMBIUM, *Linn.* The name is derived from *aner*, anther, and *kimblon*, a saucer, in allusion to the peculiar form of the stamens and their appendages. *Linn.* 6, Or. 3, Nat. Or. *Melanthaceæ*. Interesting bulbous-rooted plants; for culture, &c. see *Melanthium*.
Synonyme: 1, *Melanthium eucomoides*.

eucomoides 1. Green 4, G. Bl. P. $\frac{3}{4}$ C. G. H. 1794

ANDROGRAPHIS, *N. V. E. Aner*, a man, and *grapho*, to write. *Linn.* 2, Or. 1, Nat. Or. *Acanthaceæ*. See *Justicia*.

ANDROMACHIA, *Kunth*. Named after Andromachus, a physician to Nero. *Linn.* 19, Or. 2, Nat. Or. *Asterææ*. An uninteresting species, of easy culture—*igniaria*.

ANDRÔMEDA, *Linn.* Named after the virgin Andromeda. *Linn.* 10, Or. 1, Nat. Or. *Ericææ*. Very ornamental and interesting species, delighting in peat soil, and increased plentifully from layers and seeds. The seed should be sown in pots, and very thinly covered, for if deep in the soil they will rot; the young plants should be planted out in the spring. *Synonymes*: 1, *A. lucida*, *populifolia*,

reticulata, *laurina*; 2, *A. Walleri*; 3, *A. spinulosa*; 4, *A. nitida*, *lucida*; 5, *A. polifolia*, *latifolia*; 6, *Pernëthya angustifolia*; 7, *A. paniculata*; 8, *A. pubescens*. See *Lyonia*.

ANDROPÔGON, *Willdenow*. The little tufts of hairs on the flowers resemble a man's beard; hence the name from *aner*, a man, and *pogon*, a beard. *Linn.* 23, Or. 1, Nat. Or. *Graminææ*. Uninteresting species of grass, of the simplest culture. See *Anatherium*, *Anthistria*, *Aptida*, *Chrysopogon*, *Cymbopogon*, *Heteropogon*, *Pollinia*, and *Rhipidium*. *Synonyme*: 1, *Andropogon laxus*—*angustifolius*, *annulatus*, *argenteus*, *comosus*, *furcatus*, *hirtus*, *Ischæum*, *laguroides*, *saccharoides*, *serratus* 1.

ANDRÔSACE, *Linn.* Named in reference to the resemblance of the round hollow leaf to an ancient buckler; from *aner*, a man, and *sacos*, a buckler. *Linn.* 5, Or. 1, Nat. Or. *Primulææ*. Pretty species, succeeding well in small pots, in a mixture of turfy loam and peat, cautiously watered. They increase from seeds, or by divisions. See *Arëtia* and *Draba*.

ANËMÏA. See *Anemiopsis*.

ANEMIDICTYON, Smith. *Aneimon*, naked, and *diktjon*, a net. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceæ*. See *Anemia*.

ANEMÏOPSIS, Hooker. Named in allusion to the appearance of the inflorescence, from *aneimon*, naked, and *opsis*, appearance. *Linn.* 6, Or. 1, Nat. Or. *Saururaceæ*. A genus of plants growing in marshes and pools of water in North America, China, and North of India. They require similar treatment to *Calla æthiopica*. *Synonyme*: 1, *Anemia californica*.

californica 1 W. red. gr. 6, H. Tu. P. 3 California 1861

ANEMÏONE, Linn. Many of the species inhabit elevated windy places; hence the name, from *anemos*, the wind. *Linn.* 13, Or. 6, Nat. Or. *Ranunculaceæ*. Very showy free-flowering species, succeeding best in light loamy soil. They increase variously, from divisions, offsets, or seeds, and the greenhouse species may be propagated from cuttings in light loam under a glass. *Synonymy*: 1, *A. ochotensis*; 2, *A. fragifera*; 3, *Clématis capensis*; 4, *A. tenella*; 5, *A. stellata, versicolor*; 6, *A. alpina*; 7, *A. cuneifolia*; 8, *A. hortensis, pavonia*; 9, *A. apifolia*; 10, *A. multifida Hudsoniana*; 11, *A. ranunculoides*; 12, *Clématis japonica, Atragene japonica*; 13, *A. Ludoviciana, Clématis hirsutissima*; 14, *A. pulsatilla rubra, A. pratensis intermedia*. See *Hepatica* and *Thalictrum*.

ANISOPETALUM, *Hooker*. Derived from a without, *isos* equal, and *petalum*, a petal, on account of the inequality of the petals. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceae*. Small plants, growing only a few inches high, and requiring similar treatment to *Dendrobium*.

Careyanum . Brn. pur. 8, S. Epi. $\frac{1}{2}$ Nepal . . 1823

ANNESLEA, *Wall*. Named in honour of George Annesley, Lord Mountmorris, a traveller in N. Africa. *Linn.* 13, Or. 1, Nat. Or. *Ternstroemiaceae*. The only species known is a tree bearing very fragrant flowers, and easily cultivated in loam and heath mould. Ripened cuttings strike root in sand if plunged in heat.

fragrans . . Pale yel. 1, S. Ev. T. 30 E. Ind. .

ANNESORHIZA, *De Candolle*. *Linn.* 5, Or. 2, Nat. Or. *Apiaceae*.—*capensis*.

ANNULAR, circular, producing a ring or circle.

ANNULATIONS, rings or circles.

ANODA, *Cavanilles*. Named in reference to the impervious capsule cells; from *anodos*, signifying impervious. *Linn.* 16, Or. 8, Nat. Or. *Malvaceae*. Uninteresting species; for culture, &c., see *Sida*. *Synonymes*: 1, *Sida hastata*;

2, *S. cristata*; 3, *S. crenatiflora*; 4, *S. deltoides*; 5, *S. cristata*.—*aceriflora* 1, *Dilleniàna* 2, *hasitata*, *incarnata*, *parviflora* 3, *triangularis* 4, *triloba* 5.

ANODONTEA, *De Candolle*. From *a*, destitute, and *odontos*, of a tooth, alluding to the stamens. *Linn.* 15, Or. 1, Nat. Or. *Brassicaceae*. Ornamental species; for culture, &c., see *Algssum*. *Synonymes*: 1, *Algssum dasycarpum*; 2, *Al. edentulum*; 3, *Al. halimifolium*; 4, *Al. macrocarpum*; 5, *Al. rupestre*; 6, *Al. spinosum*.

ANOMATHÈCA, *Ker*. Named from *anomos*, singular, and *theca*, a capsule. *Linn.* 3, Or. 1, Nat. Or. *Iridaceae*. Very interesting free-flowering species, succeeding in common soil, and multiplied plentifully from seeds. *A. cruenta* makes a pretty show when planted in a bed by itself in the flower-garden, where its neat blossoms are produced in abundance.

cruenta . . Blood . 7, F. Bl. P. $\frac{1}{2}$ C. G. H. . 1830
juncæa . . Lilac . 5, G. Bl. P. $\frac{1}{2}$ C. G. H. . 1791

ANOMOCHLÒA, *Hooker*. Named from *anomos*, irregular, and *chloos*, green. An ornamental grass, its habit of growth not unlike the *Marranta*, of very easy culture, and increased by division. *Linn.* 4, Or. 1, Nat. Or. *Graminaceae*.

marantoldea . G. yel. . 6, S. Grass $1\frac{1}{2}$ Brazil . 1861

ANOMODON, *Hooker*. Compounded from *anomos*, irregular, and *odous*, a tooth; in allusion to the singular nature of the peristome. *Linn.* 24, Or. 5, Nat. Or. *Bryaceae*. The plants have dark, blackish green, long cylindrical, straggling stems, and are found on the wilds of Dartmoor. *Synonymes*: 1, *Neckera curtispéndula*; 2, *Hypnum viticulòsum*.—*curtispéndulum* 1, *viticulòsum* 2.

ANONA, *Adanson*. From Menona, its Banda name. *Linn.* 13, Or. 6, Nat. Or. *Anonaceae*. An interesting genus, comprising for the most part fruit-bearing plants, preferring a moist heat and rich loamy soil, well watered. Ri-

pened cuttings planted in sand, under a glass, root readily; and fresh seed obtained from the tropics, sown in pots, and plunged in a strong hotbed, will speedily furnish good plants. The fruit is a pretty berry of a sub-acid taste, often as large as an orange, but in general more like a plum. *A. Cherimòlia* produces a succulent fruit of a dark purple colour, containing a soft sweet mucilage, and is much esteemed by the Peruvians. *A. reticulata* yields a yellowish, sometimes reddish, fruit, of the consistence of custard, and is much esteemed by some people. *A. palustris* bears a large, smooth, heart-shaped, sweet-scented fruit, of an agreeable taste, but is a strong narcotic; the wood of this plant is so remarkable for its soft spongy nature, as to be employed in Brazil as a substitute for corks. *Synonyme*: 1, *A. triptetala*. See *Asimina* and *Monodora*.

ANONACEÆ, an order of ornamental trees and shrubs. The produce of some, as the Custard Apple, Cherimoyer, &c., are esteemed excellent dessert fruit.

ANÓNIMOS. See *Zornia*.

ANÓPTERIS, *Bp*. Derived from *ano*, upwards, and *pteron*, a wing; winged seeds. *Linn.* 10, Or. 2, Nat. Or. *Escalloniaceae*. Only one species has been introduced—a very fine greenhouse shrub, with large handsome leaves. It is easily grown in loam and peat, and increased by cuttings.

glandulosa . White . 2, G. Ev. S. 20 V. D. L. . 1823

ANÒTIS, *De Candolle*. From *a*, privative, and *ous*, an ear; teeth to calyx. *Linn.* 4, Or. 1, Nat. Or. *Cinchonaceae*. A pretty little plant, which will flower from June to September in the open border or on rockwork, for which it is remarkably well adapted. It requires the protection of a frame or greenhouse during winter, and may be increased by dividing the roots. *Synonymes*: 1, *Hedyotis ciliòlòsa*, *Houstonia ciliòlòsa*.

ciliòlòsa 1 . Pa. lilac . 7, F. Her. P. $\frac{1}{2}$ N. Amer. . 1832

ANREDERA, *Juss*. Derivation of name unknown. *Linn.* 5, Or. 3, Nat. Or. *Basellaceae*. A plant of easy culture in any common soil, and increased by division. *Synonymes*: 1, *Basella vesicària*, *Polygonum scandens*.

spicata 1 . . Blush . 7, S. Her. Cl. 12 Cuba . 1741

ANSÉLLIA, *Lindley*. Named in honour of Mr. Ansell, a young collector, who, when ill at Fernando Po, from the effects of the Niger

Expedition, found the plant on which the genus is founded growing on the stems of the Oil Palm (*Elais guineensis*). *Linn.* 20, Or. 1, Nat. Or. *Orchidæacæ*. "A noble Orchid, with flowers somewhat the colour and appearance of a large Cymbid, but far more showy. It roots freely in turfy heath-mould, and requires an ample supply of water during the growing season. In winter a season of rest is necessary, when little or no water should be given, a damp atmosphere being sufficient for all the requirements of the plant."—*Bot. Reg.* 30. *Synonyme*: 1, *A. gigantea*.

ANTHODON, *Ruiz and Pavon.* Derived from *anthos*, a flower, and *odous*, a tooth. *Linn.* 3, Or. 1, Nat. Or. *Hippocratiæææ*. Interesting evergreen species, growing in rich loam and peat, and propagated from cuttings in sand under a glass.

ellipticum . Yel. grn. . 6, S. Ev. S. 12 Rio Jan. 1818
paniculatum Yel. grn. . 6, S. Ev. S. 12 Rio Jan. 1818

ANTHOLŌMA, *La Billardière.* Named from *anthos*, a flower, and *loma*, a fringe. *Linn.* 13, Or. 1, Nat. Or. *Marcgraaviæææ*. A beautiful tree, preferring rich loam, mixed with a little peat; ripened cuttings root in sand under a glass.

montana . White . . 5, S. Ev. T. 20 New Holl. 810

ANTHOLŪZA, *Linn.* A figurative name, from *anthos*, a flower, and *lyssa*, rage; the flowers look like the mouth of an animal ready to bite. *Linn.* 3, Or. 1, Nat. Or. *Iridæææ*. An interesting genus of bulbous plants, thriving well in sandy soil under a south wall; the roots should be planted deep enough so as to be out of the reach of severe frost; they increase easily from offsets. *Synonymie*: 1, *A. æthiopia viligera*. See *Anisanthus*.

ANTHŌPHORUM, the receptacle on which the petals, stamen, and ovary are seated.

ANTHOSPĒRMUM, *Linn.* From *anthos*, a flower, and *sperma*, seed. *Linn.* 22, Or. 4, Nat. Or. *Cinchonæææ*. Amber Tree. An interesting species, delighting in loam and peat, and cuttings strike freely in soil.

æthiopicum . Grn. wht. . 6, G. Ev. S. 2 C. G. H. 1692

ANTHŌXĀNTHUM, *Linn.* From *anthos*, a flower, and *xanthus*, yellow. *Linn.* 2, Or. 2, Nat. Or. *Graminæææ*. Spring Grass. Interesting species of grass, of the simplest culture. It is the dried herbage of *A. odoratum* that gives the sweet peculiar fragrance in meadow hay, said to depend on the presence of benzoic acid.

- ANTIARIS, Lesch.** *Antiar* or *Antschar*, its Javanese name. *Linn.* 21, Or. 4, Nat. Or. *Artocarpaceæ*. This is the far-famed Upas poison-tree of Java—the Boom or Bon Upas of the Javanese. The poison obtained from it is of a most deadly nature, and is called Upas, Oupas, or Ipo. The tree grows in Java and the neighbouring isles, attaining a large size, and its exhalations produce very unpleasant effects upon persons who stay long near it. The cultivation is easy, requiring merely to be potted in a mixture of light sandy loam and heath mould, and in the growing season to have plenty of heat and moisture.
toxicaria . . . Green . 5, S. Ev. T. 110 Java . . 1844
- ANTI-APHRODISIACAL**, any thing which checks the desire of sexual intercourse.
- ANTIDÉSMA, Linn.** So called from the use of the bark in making ropes; from *anti*, like, and *desmos*, bond. *Linn.* 22, Or. 5, Nat. Or. *Stilaginaceæ*. Plants requiring a rich loamy soil; ripened cuttings with their leaves on, root in sand, in a moist heat.

APICULÁTUM, the flowers resembling a bee.

APICULATE, } terminating in a little point.

APICULATED, }

APÍFERRA, like a bee.

APIOS, *Boerhaave.* From *apion*, a pear; in reference to the form of the roots. *Linn.* 17, Or. 4, Nat. Or. *Fabæææ*. An ornamental species; for culture, &c., see *Olivéria*. The roots may be eaten with safety. *Synonyme*: 1, *Glycime*.

Apios. See *Wistaria*.

tuberósa . . . Brown pkn. 8, H. Tu. P. 6 N. Amer. . 1640

ÁPÍUM, *Linn.* Derived from the Celtic word *apon*, water; in allusion to the place where the plants grow. *Linn.* 5, Or. 2, Nat. Or. *Apiæææ*. The mode of cultivating these plants is so well known, that we need not mention it here. See *Petroselinum*.

gravedens . . . White . . 7, H. B. 4 Britain, ditches
fractophýllum, *prostrátum*, *románium*, *ternátum*.

APLÉCTRUM, *Nuttall.* From *a*, without, and *plektron*, a spur; the flower is spurless. *Linn.*

- 20, Or. 1, Nat. Or. *Orchidaceæ*. A curious little plant growing freely in sandy peat, and increased by offsets—*Corallorhiza hiemalis*.
hiemalis . . . Brown . 4, H. Ter. 1 N. Amer. . 1827
- APLOPAPPUS**, *De Candolle*. From *aploos*, simple, and *pappus*, down. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. Plants of the easiest culture.
ciliatus . Yellow . 9, H. Her. P. 2 N. Amer. . 1821
- APLOPHYLLUM**, *Jussieu*. From *aploos*, simple, *phyllon*, a leaf. The leaves are simple. *Linn.* 10, Or. 1, Nat. Or. *Rutaceæ*. Uninteresting species, of easy culture. *Synonymes*: 1, *Ruta dahurica*; 2, *R. linifolia*; 3, *R. palovina*; 4, *R. pubescens*; 5, *R. suaveolens*; 6, *R. villosa*—*Buxbaumii*, *dahuricum* 1, *linifolium* 2, *patavinum* 3, *pubescens* 4, *suaveolens* 5, *tuberculatum*, *villosum* 6.
- APLOTAXIS**. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. Herbaceous plants of easy culture, merely requiring to be planted in the open borders, and increased by division of the roots. *Synonymes*: 1, *Carduus heteromallus*; 2, *Saussurea Frolovii*.
albescens . Purple . 7, H. Her. P. 2 India . 1837
candicans . Purple . 6, H. Her. P. 2 Nepaul . 1820
Frolovii . Purple . 6, H. Her. P. 2 Siberia . 1827
- APLUDA**, *Linn.* Derived from *apluda*, chaff; the resemblance of the involucre to chaff. *Linn.* 23, Or. 1, Nat. Or. *Graminaceæ*. An uninteresting species, of the easiest cultivation. *Synonyme*: 1, *Andropogon involucreatus*—*aristata* 1.
- APOCYNACEÆ**. An order of plants, most of them containing acrid milky juices very poisonous. Many bear handsome flowers.
- APOCYNUM**, *Linn.* Derived from *apo*, away, and *kyon*, a dog; supposed to be mortal if eaten by dogs. *Linn.* 5, Or. 1, Nat. Or. *Apocynaceæ*. Plants of little beauty, but easy culture; *A. androsæmifolium* is acrid, and blisters the skin. The stalks of *A. cannabinum* afford the North American Indians a substitute for hemp, of which they make twine, bags, fishing-nets, and lines, also linen for their own wear. See *Eustógia* and *Ichnocarpus*.

monostachyon . Pink . 9, S. Aq. P. $\frac{1}{2}$ E. Ind. . 1803
- APÓPHYSIS**, a swelling beneath the theca of mosses.
- APÛRUM**, *Blume*. From *aporus*, a running-shoot; from the appearance of the plant. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. This genus possesses little to recommend it to the lovers of this beautiful tribe. Its insignificant flowers are produced from the axils of its bright green leaves. It thrives well with the same treatment as *Vanda*. *Synonymes*: 1, *Dendrobium anceps*; 2, *Apòrum indivisum*; 3, *Dendrobium sarcostomum*.

- APOSTASIACEÆ**, a small order of Endogens, nearly related to terrestrial *Orchidaceæ*, and natives of the hot woods of India.
- APOUCOÛITA**. See *Cássia Apoucouita*.
- APPENDAGE**, that which is attached.
- APPENDANT**, } hanging, approaching, pendulous.
APPENDENT, }
- APPENDICULATE**, } furnished with appendages.
APPENDICULATED, }
- APPENDIX**, anything attached.
- APPLE BERRY**. See *Billardiæra*.
- APPLE TREE**. See *Pyrus Malus*.
- APRESSED**, pressed close to anything.
- APPROXIMATE**, } near together.
APPROXIMATING, }
- APRICOT TREE**. See *Armeniaca*.
- APTERÁNTHES**, *Hooker*. *Linn.* 5, Or. 2, Nat. Or. *Asclepiadaceæ*. A genus of succulent plants resembling *Stapelia* in habit, and requiring similar treatment. *Synonymes*: 1, *Stapelia Gussoniæna*, *S. europæa*, *Boucherdiæa Mumbaiæna*.
Gussoniæna, 1 Purp. y. 8, G. Suc. S. 1 Lampedusa 1832
- APTEROUS**, without the membranous margins, by botanists called wings.
- APOSIMUM**, *Brown*. *Linn.* 14, Or. 2, Nat. Or. *Scrophulariaceæ*.
depressum . Blue . 8, G. Ev. S. 2 $\frac{1}{2}$ C. G. H. . 1836
- AQUARTIA**, *Jaeg.* In honour of B. Aquart, Jacquin's companion in America. *Linn.* 4, Or. 1, Nat. Or. *Solanaceæ*. A species of little beauty, and easy culture.
tomentosa . White . 5, S. Ev. S. 4 S. Amer. . . 1819
- AQUATIC**, growing in water.
- AQUIFOLIACEÆ**. Hollyworts. Evergreen trees and shrubs. Natives of various parts of the world. The Holly is found in Europe.
- AQUILARIACEÆ**. Lign Aloes or Agallochum belongs to this order. The species are all natives of the tropical parts of Asia.
- AQUILARIA**, *Linn.* The wood is called *bois d'aigle*, or eagle wood, in Malacca; hence the name from *aquila*, an eagle. *Linn.* 10, Or. 2, Nat. Or. *Aquilariaceæ*. An ornamental evergreen shrub, succeeding in loam and peat, and propagated from cuttings, under a glass, in heat. *Synonyme*: 1, *A. ovata*.
malaccensis 1 Wht. grn. 3, S. Ev. S. 15 Malacca 1828
- AQUILËGIA**, *Linn.* From *aquila*, an eagle; alluding to the form of the petal. *Linn.* 13,

Or. 5, Nat. Or. *Ranunculacææ*. The species of this ornamental genus may be grown in common soil, and increased plentifully from seeds. *Synonymes*: 1. *A. glandulosa*. 2. *A. atropurpurea*. 3. *A. alpina grandiflora*. 4. *A. bicolor*. 5. *A. glandulosa*. 6. *A. vulgaris, dahurica*.

ARACÆA. See *Psidium*.

ARACÆE. A considerable order of endogenous, tuberous rooted, herbaceous, and semi-succulent plants, of which the Common Arum is a familiar example.

ARACHIS, *Linn.* From *a*, privative, and *rachis*, a branch; the plant bears no branches. *Linn.* 17, Or. 4, Nat. Or. *Fabacææ Cæsalyptinææ*. This very singular plant has the property of forcing the fruit or pods as they increase in size into the earth, where they ripen their seeds, hence the trivial name earth-nut. It grows in sandy loam singly in pots, and is multiplied from offsets. In South Carolina the seed is roasted, and used as chocolate; it further affords a thin limpid oil, proper for lamps, a purpose to which it is applied in Cochinchina.

hypogæa . Yellow . 6, S. A. 2 S. Amer. . 1812

ARACHNE. See *Piptatherum paradoxum*.

ARACHNOIDEUS, covered with capillary filaments.

ARADS. See *Aracææ*.

ARAJA. See *Gomutus saccharifer*.

ARALIA, *Linn.* A name of unknown meaning, under which one species was sent to Fagon from Quebec in 1764, by a French physician. *Linn.* 5, Or. 5, Nat. Or. *Araliææ*. These fine species succeed well in common soil, and cuttings, cut off at a joint where the wood is ripe, and planted in a sheltered situation, soon strike root. *A. nudicaulis* is used in North America as a substitute for sarsaparilla. *Synonymes*: 1. *Hédéra aculeata*. 2. *H. arborea*. 3. *H. capitata*. 4. *Panax fragrans*. 5. *Arália hispida*. 6. *A. heterophylla*.

ARALIACEÆ. An order consisting of trees, shrubs, and herbaceous plants, with the habit of Apiaceæ. The Ivy is a familiar example.

ARANIFEROUS, resembling a spider.

ARAR TREE. See *Callitris quadrivalvis*.

ARAUCARIA, *Ruiz* and *Pavon*. Derived from *araucanus*, its name in Chile, *Linn.* 22, Or. 13, Nat. Or. *Pinaceæ*. This, may be termed the handsomest genus of pinaceous plants with which we are acquainted. *A. imbricata* in particular is certainly one of the grandest trees known. It will thrive well in the open air, with the protection of a mat or two in very severe weather, and when got pretty large will no doubt be perfectly hardy. Rich open loam suits them well; and propagation may be effected in the same manner as recommended for *Altingia*. *Synonymes:* 1, *A. columnaris*, *Dombeya columnaris*, *Cupressus columnaris*, *A. excelsa*. See *Altingia*.

ARAÛJA, Don. In honour of Antonio de Araujo. *Linn.* 5, Or. 2, Nat. Or. *Asclepiadaceæ*. See *Physalanthus*.

ARBOREUS, being a tree, as distinguished from frutescent.

ARBORESCENT, having a tendency to become a tree.

ARBOR-TOXICARIA. See *Antidaris toxicaria*.

ARBOR-VITÆ. See *Thuja*.

ARBUSUS, Linn. From the Celtic *arboise*, austere-bush; rough fruit. *Linn.* 10, Or. 1, Nat. Or. *Ericaceæ*. Elegant shrubs, especially *A. Unedo*, which is covered with blossoms, and sometimes with fruit throughout the months of October and November. They succeed well in open loamy soil, mixed with a little sandy peat, and increased by seeds, or by budding and inarching on each other: the dwarfer kinds root readily by layers. From the flowers of *A. Unedo* an agreeable wine is prepared in the island of Corsica. The fruit when taken in any quantity is narcotic. *Synonymes:* 1, *A. hybrida*. 2, *A. mollis*, *A. zalapensis*. 3, *Arctostaphylos tomentosa*. See *Arctostaphylos*, *Oxyecoccus*, & *Pernellia*.

ARCHANGEL: See *Lamium*.

ARCHANGEL. See *Archangelica officinalis*.

ARCHANGÉLICA, Hoffman. From *arche*, chief, and *angelica*. So named, from its supposed archangelic virtues. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. Ornamental species; for culture, &c. see *Angélica*. *Synonymes:* 1, *Angélica atropurpurea*. 2, *A. archangelica*. *officinalis* 2 . Green 7, H. B. 4 England, wat. pl. *atropurpurea* 1.

ARCHILL. See *Rocella tinctoria*.

ARCTUM, Linn. From *arktos*, a bear; in allusion to the rough bristly fruit. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. Mere weeds, of the simplest culture. The seeds of *A. Bardana* are diuretic, diaphoretic, and gently purgative. *Synonymes:* 1, *A. tomentosa*. 2, *A. major*. See *Berardia*—*Bardana* 1, *Lappa* 2, minus.

ARCTOCALYX, Fenzl. *Arktos*, a bear, and *calyx*—shaggingness of calyx. *Linn.* 14, Or. 2, Nat. Or. *Gesneraceæ*. The treatment of shrubby *Gesnerads* suits this genus well. A cool humid stove heat, and cuttings of the stem root readily in heat.

Endlicheriana Yel. crim. 4, S. Ev. S. 6 Vera Cruz. 1849

ARCTOGERON, De Candolle. From *arktos*, a bear, and *geron*, an old man. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. See *Erigeron*.

ARCTÓTUS, Linn. From *arktos*, a bear, and *pous*, a foot; alluding to the spines which beset the plant, and which have been compared to the claws of a bear. *Linn.* 23, Or. 2, Nat. Or. *Apiaceæ*. An interesting species, which should be grown in a mixture of peat, sand, and loam; it may be increased by dividing the plant or by seeds.

echinatus . . Green 5, G. Her. P. 1 C. G. H. . 1774

ARCTOSTAPHYLOS, Adamson. Derived from *arktos*, a bear, and *staphyle*, a grape; in allusion to the roughness of the fruit. *Linn.* 10, Or. 1, Nat. Or. *Ericaceæ*. Interesting species; for culture, &c. see *Arbutus*. *Synonymes:* 1, *Arbutus alpina*. 2, *A. discolor*, *A. nitida*. 3, *Arctostaphylos tomentosa*. 4, *Arbutus Uva-ursi*. See *Vaccænum*.

ARECA, *Linn.* When an old tree, it is called in Malabar *areec*, when quite young, *Perynga*. *Linn.* 21, Or. 10, Nat. Or. *Palmaceae*. This most beautiful genus of palms succeeds best in light sandy loam, and can be increased only from seeds. The well-known Betel Nut is the fruit of *A. Catechu*, and remarkable for its narcotic or intoxicating power; from the fruit is prepared a kind of spurious *Catechu*. It seems, however, doubtful whether the intoxicating effect of the Betel Nut, which is cut in slices, folded in the aromatic leaves of the Betel pepper Nut (Piper Betel), and chewed in the mouth like tobacco, is not owing to the Piper leaf, in which it is wrapped when eaten, rather than to any special property of its own. *Synonymes*: 1, *A. borbonica*. 2, *Euterpe pistifera*, *E. oleracea* var. 3, *A. Banksii*.

ARÉNGA, *Lab.* Name not explained by the author. *Linn.* 21, Or. 8, Nat. Or. *Palmaceæ*.

A very useful and interesting Palm. In its native country the fibres attached to the petioles are twisted into ropes, the medulla of the trunk is used as sago, and the saccharine juice forms excellent sugar. For culture, &c., see *Gomutus*. *saccharifera*. Yellow S. Palm. Asiatic Is. 1830

AREOLÆ, little spaces on areas on the surface of anything; the spaces between the cracks in the lichens are the areolæ.

ARETHÛSA, *Swarts*. A nymph of Diana's, who was changed into a fountain; applied to this genus on account of the habit of the plants. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. The species of this genus are handsome, especially *A. bulbosa*, which has a large fine lilac flower terminating each stem; it requires to be kept in the greenhouse, and to be grown in a peaty soil, very moist, with the pots well drained. *A. plicata* does not require to be kept quite so moist. See *Bartholina* and *Pogonia*.

bulbosa . . . Wht. ro. 6, G. Ter. 1 Carolina

plicata . . . Yel. pnc. 7, S. Ter. 1 E. Ind. . . 1806

ARËTIA, *Willdenow*. Called after Benoit Aretius, a Swiss, professor in the university of Berne. *Linn.* 5, Or. 1, Nat. Or. *Primulaceæ*. Minute interesting species, growing best on rock-work or in pots. Sandy loam and peat suit them, and they are multiplied by dividing the roots.

Synonyme: 1, *Androsace Arëtia*.

ARIA. See *Pyrus Aria*.

ARIDITY, dryness.

ARIEFINUM, resembling a ram's head.

ARÍL, { a process of the placenta adhering to
ARÍLLUS, { the hilum of seeds; & a peculiar substance covering the seeds.

ARILLATE, having that peculiar appendage called arillus. A term only applied to seeds.

ARIÓPSIS, *Graham*. From *aron*, *Arum*, and *opsis*, sight; from the likeness to *Arum* in habit, &c. *Linn.* Nat. Or. *Aracææ*. A very curious plant, discovered by J. S. Law, Esq., in Bombay. It grows freely in light sandy soil, and may be readily propagated by suckers and division. *Synonyme*: 1, *Remusatia vivipara*, *Caladium viviparum*, *Arum viviparum*.

peltata 1 . . Yel. pur. 8, S. Her. P. 1½ Bombay . 1845

ARISÁRUM, *Tournefort*. A Greek word. *Linn.* 21, Or. 9, Nat. Or. *Aracææ*. A curious plant, of little interest, and easily grown in sandy loam, with a little peat. *Synonyme*: 1, *Arum Arisárum*.

vulgare 1 . . Lgt. yel. 5, F. Her. P. 1 S. Eur. . 1596

ARISÁMA, *Bentham*. Derivation unknown. *Linn.* 21, Or. 7, Nat. Or. *Aracææ*. A small stemless genus, with tuberous roots, like those of the common *Arum*, purple-stalked pedate leaves, and a pink or purple spathe from five to six inches long. It was discovered in shady woods near Morelia by Mr. Hartweg, who sent it to the Horticultural Society. *Synonyme*: 1, *Arum Murrayi*.

ARISTIDA, *Linn.* Derived from *arista*, an ear of corn. *Linn.* 3, Or. 2, Nat. Or. *Graminacææ*. These plants are not worth cultivating. See *Chætaría*.

stipoides . . . Apetal . 6, Grass. 1½ N. Holland 1826
vagans . . . Apetal . 6, Grass. 2 N. Holland 1816

ARISTOLOCHIACÆÆ. A small order of climbing herbaceous, and half-shrubby plants, bearing mottled and singularly-shaped flowers. The common Birthwort (*Aristolochia Clematitis*) is a British example.

ARISTOLÓCHIA, *Linn.* So named from *aristos*, best, and *locheia*, parturition; its supposed medical qualities. *Linn.* 20, Or. 3, Nat. Or. *Aristolochiacææ*. This is a remarkable genus, the flowers having more or less the appearance of a horn. The most suitable compost is a mixture of sandy loam and peat, with a very little well-decomposed dung. Cuttings root readily in sand, under a glass in heat. *Synonymes*: 1, *A. ringens*; 2, *A. grandiflora*; 3, *A. trilobata*.

ARISTOTÉLIA, *Willdenow*. In memory of Aristotle. *Linn.* 11, Or. 1, Nat. Or. *Tiliaceæ*. This as a shrub is showy, but its flowers have little beauty. In a warm situation it grows freely, in common soil, and ripened cuttings soon take, as do also layers. It produces eatable berries.

ARKÁNZA. See *Aristolóchia Arkánza*.

ARMENIACA, *Tournefort*. Named from the apricot being originally from *Armenia*. *Linn.* 12, Or. 1, Nat. Or. *Drupaceæ*. A genus of valuable fruit trees, as is at once apparent from its containing the well-known apricot. The species all thrive well in a rich loamy soil, and are best increased by budding on kind free-growing plum stocks. *A. vulgáris*, or common apricot, produces a round, yellow, firmish-fleshed fruit, little less esteemed than the peach or nectarine; it is used fresh from the tree at the dessert, and is also made into jellies, preserves, &c.; from the clarified juice the Chinese make lozenges, which, dissolved by water, yield a grateful beverage; the nut yields a kind of oil, and the young shoots a fine golden colour to wool. *Synonymes*: 1, *Prúnus brigantíaca*; 2, *P. dasycarpa*; 3, *P. sibirica*; 4, *P. armeniaca*; 5, *A. pedunculata*.

ARMERIA, *Willdenow*. *Armeria* is the Latin name of Sweetwilliam. *Linn.* 5, Or. 5, Nat. Or. *Plumbaginaceæ*. These plants though dwarf are handsome, and well adapted for ornamenting rock-work; they may also be grown in pots, in sandy, open, rich soil. *A. vulgáris*, or common thrift, is considered next to box the most valuable for edging walks, borders, &c. *Synonyme*: 1, *A. scabra*. 2, *Stáctis armeria*.

ARRHYNCHIUM, *Lindl.* A, privative, and *rhy-nchos*, a snout. *Linn.* 20, Or. 1, Nat. Or. *Orchidææ*. Stove *Epiphytes* of small size, thriving on blocks of wood, or in fibrous peat, and increased by division.

labrósum . . Pur. yel. . 8, S. Epi. $\frac{1}{2}$ Asia . 1849

ARRÓSUM, gnawed, bitten.

ARROW-GRASS. See *Triglochin*.

ARROW-HEAD. See *Sagittaria*.

ARROW-ROOT. See *Maránta*.

ARSCYRIA, *Pers.* Name derived from *arkus*, a net. The spores are fastened together by a net-work of fibres; beautiful coloured minute fungi found upon rotten wood. *Linn.* 24, Or. 9, Nat. Or. *Lycoperdææ*. *Synonyme*: 1, *Trichia denudata*—A. punicea 1, nütans.

ARTABOTRYX, *R. Brown*. This name was suggested by the curious tendril belonging to the peduncle, by which the growing fruit is suspended on the nearest support; from *aratao*, to suspend, *botrys*, grapes. *Linn.* 13, Or. 6, Nat. Or. *Anonææ*. This species is very ornamental, growing about six feet high, and is easily cultivated in sandy loam, mixed with a little peat, and propagated from ripened cuttings in sand, under a glass. *Synonyme*: 1, A. *hecapétala*.

odoratíffima . Brown . 7, S. Ev. S. 6 China . 1758

ARTANÉMA, *D. Don*. A tooth is borne on one side of each of the longer filaments; whence the name, from *aratao*, to support, *nema*, a filament. *Linn.* 14, Or. 1, Nat. Or. *Scrophulariææ*. This is an interesting plant, with the aspect of a mimulus, producing large showy blossoms. It has been treated in the greenhouse, but will succeed in the open border in summer, in loam and peat; seeds. *Synonyme*: 1, *Torènia scðbra*.

fimbriátum. Pa. blue. 8, G. Ev. S. 3 Moreton B. 1830

ARTEDIA, *Linn.* In honour of Peter Artedi, a Swedish naturalist, one of the first who attempted to divide umbelliferous plants into genera. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. An uninteresting species, of the simplest culture—*squamata*.

ARTEMÍSIA, *Linn.* Artemis, one of the names of Diana; the plant is said to have been named after Diana, on account of its being used in bringing on precocious puberty. *Linn.* 19, Or. 1, Nat. Or. *Asterææ*. Some species of this genus are pretty, others merely ornamental, while some are wholly uninteresting; their silvery leaves have a showy effect in rock-work, for which places they are well suited; they grow in almost any soil, and are increased readily from divisions, cuttings, and seeds. A. *chinénsis*, and some other species, yield the moxa of China, a substance used as a cauterly, by burning it upon parts affected with gout and rheumatism. In India A. *indica* is considered a powerful deobstruent and antispasmodic; and the leaves of other species are esteemed a valuable stomachic medicine. *Synonymes*: 1, A. *carcásica*; 2, A. *leucanthe-mifolia*; 3, A. *nütans*, *cérnuá*; 4, A. *rupéstris*; 5, A. *Redóuski*; 6, A. *inodóra*; 7, A. *glaci-ális*, *rupéstris*; 8, A. *rupéstris*; 9, A. *spléndens*.

ARTHONIA, The meaning unexplained. *Linn.* 24, Or. 8, Nat. Or. *Graphidaceae*. Curious species, growing from a quarter of an inch to three inches high, and found chiefly on the bark of old trees.—*astroidea*, *ilicna*, *impolita*, *virida*, *lyncea*, *obscura*, *Swartziæna*.

ARTHURICUS, gouty, swollen.

ARTHROPHYLLUM, *Boj.* See *Phyllarthron*. The *Arthrophyllum* of Blume is a genus of Araliaceous plants of no great beauty, all natives of Java; but no species has yet, that we are aware of, been introduced. The name is derived from *arthron*, a joint, and *phyllon*, a leaf; in reference to the jointed leaf-stalks. *Linn.* 5, Or. 1, Nat. Or. *Araliaceae*—but the genus so named by Bojer belongs to *Crescentiaceae*, and is referred to *Phyllarthron*.

ARTHROPODIUM, *R. Brown*. Derived from *arthron*, a joint, and *pous*, a foot; the foot-stalks of the flowers being jointed. *Linn.* 6, Or. 1, Nat. Or. *Liliaceae*. Some species of this genus are very pretty, as *A. minus* and *fimbriatum*; others are ornamental; and the whole succeed in sandy loam and peat, and increase freely by divisions or seeds. *Synonymes*: 1, *A. minus*; 2, *Anthericum pendulum*. See *Stypandra*.

ARTICHOKE. See *Cynara*.

ARTICULATE, } jointed, having joints.

ARTICULATED, } jointed, having joints.
ARTICULATIONS, the places where one thing is jointed with another.

ARTOCARPACEÆ. An order separated from *Urticaceae*, including the Bread-fruit (*Artocarpus*), the Bread-nut (*Brósimum*); all the species abound in milky juice, and in some cases is rich and wholesome, as in the *Galactodendron*;

in others, however, it is extremely poisonous, as in the *Upas* poison (*Antiaris toxicaria*).

ARTOCARPUS, *Linn.* From *artos*, bread, and *carpos*, fruit; in allusion to the well-known name and uses of the bread-fruit. *Linn.* 21, Or. 1, Nat. Or. *Artocarpaceae*. To this genus belongs the bread-fruit tree of the South Sea Islands. They are difficult to cultivate in this country; a light rich loamy soil is best adapted to them. Sweet says, "they have been generally treated too tenderly, and not allowed sufficient air. They appear to be of the same nature as the fig, to which they are nearly allied. Large cuttings root freely in a pot of sand, plunged under a hand-glass, in a moist heat, with all their leaves entire; if the leaves are shortened, it is a great chance if they succeed." For further particulars respecting this very valuable genus, see *Loudon's Encyclopædia of Plants*.

ARUNCUS. See *Spiræa Aruncus*.

ARUNDINA, *Blume*. From *arundo*, a reed; resemblance of the stems. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceae*. These slender-stemmed plants produce flowers almost equal in size and beauty to *Cattleya*. They require the orchidaceous stove; and on account of the smallness

of their pseudo-bulbs, their season of rest must not be a very dry one, their native habitat being well-shaded places; during growth, they should be watered liberally, and are readily increased by division. *Synonymes*: 1, *Cymbidium bambusifolium*.

bambusifolia 1. Purple . 1, S. Epi. Nepal . 1839
chinensis . . . 5, S. Epi. China . 1844
densa Ro. vio. 3, S. Epi. Singapore 1840

ARUNDINACEA, reed-like.

ARUNDINARIA, *Michaux.* An alteration of the word *arundo*, a reed. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. These plants are only fit for general collections; their culture is simple, and young plants are obtained from seeds. *Synonymes*: 1, *Ludolphia glaucescens*, *Panicum glaucescens*.

glaucescens 1 . Apetal . 6, Grass. 10 E. Ind. . 1818
macrospërma . Apetal . 6, Grass. 10 N. Amer. 1809

ARÚND, *Beauvois.* An ancient name of doubtful origin, supposed by some to be from the Latin *arundo*, a reed; and by a recent author to be from the Celtic *aru*, water. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. These are mere weeds. *A. Dónax*, var. *versicolor*, is regarded by some on account of its striped leaves. *A. Dónax* is grown in France and Italy for fishing-rods, fence-wood, training vines to, &c. See *Calamagrostis*, *Danthônia*, *Dégraphis*, *Phragmites*, *Poa*, and *Psamma*.

Dónax . . . Apetal . . 7, Grass. 10 S. Eur. . 1648
versicolor . Apetal . . 7, Grass. 3 S. Eur. . 1648
festuacea, tenax.

ASAFETIDA. See *Ferula*.

ASAGRÆA, *Lindley.* In compliment to Dr. Asa Gray, the author of a Treatise upon North American *Melanthaceæ*. *Linn.* 6, Or. 3, Nat. Or. *Melanthaceæ*. A plant of but little beauty. The culture and propagation is similar to that of *Tigrádia*. *Synonymes*: 1, *Helónias officinális*; 2, *Verátrum officinále*.

officinális . White . 9, F. Bl. P. 1 Vera Cruz. 1837

ASARABÁCCA. See *Asarum*.

ASARINA. See *Antirrhinum Asarina*.

ASARUM, *Linn.* From *a*, privative, and *saron*, feminine; the application of the term unexplained. *Linn.* 11, Or. 1, Nat. Or. *Aristolochiaceæ*. This is a remarkable genus of dwarf plants, on account of their curious flowers, which are frequently overlooked among the leaves; it is best to plant them near the front of borders, on account of their dwarf character; any common soil suits them, and portions of the root make young plants. The leaves and roots of *A. europæum* are emetic, cathartic, and diuretic.

virginicum . . . Brown 5, H. Her. P. 1/2 Virginia 1759

ASCARICIDA, *Cassini.* Derived from *ascaris*, an intestinal worm, and *cædo*, to kill, because of its medical properties. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. Interesting, dwarfish annuals, easily cultivated, with the treatment in com-

mon practice for stove annuals. *Synonymes*: 1, *Vernonia anthelmintica*; 2, *V. triplinervia*.
anthelmintica 1 Purple 8, S. A. 1 E. Ind. . 1770
triplinervia 2 . Purple 11, S. A. 1 Brazil . 1825

ASCENDENT, } at first trailing on the ground,
ASCENDING, } then rising erect, forming a curve.

ASC, small tubes, which contain the sporules of cryptogamous plants.

ASCIGEROUS, having ascii.

ASCLEPIAS, *Linn.* The Greek name of the *Æsculapius* of the Latins. *Linn.* 5, Or. 2, Nat. Or. *Asclepiadaceæ*. This is a genus of tall-growing herbaceous and shrubby plants, which thrive best in peat, or any very light soil. They require a good deal of room to show their characters, and are readily propagated by seeds, or dividing the roots. *A. syriaca* is very odorous, and in Canada, when in flower, charms the traveller, especially when passing through woods in the evening. The French there eat the tender shoots in spring, as we do asparagus. The natives make a sugar of the flowers, gathering them in the morning, when they are covered with dew, and collect the cotton from the pods to fill their beds. On account of the silkiness of this cotton, Parkinson calls it Virginian silk. The roots of *A. decumbens* are diaphoretic and sudorific, and have the singular property of exciting general perspiration, without increasing the heat of the body; it is used in Virginia against pleurisy. *A. tuberosa* is used in the United States as a mild cathartic, and as a remedy for a variety of disorders. *Synonymes*: 1, *A. laurifolia*; 2, *Cynanchum Ipecacuanha*; 3, *A. connivens*; 4, *A. purpurascens*; 5, *A. hýbrida*. See *Anántheria*, *Calotropis*, *Cynanchum*, *Dæmia*, *Gomphocarpus*, *Gymnema*, *Sarcostemma*, *Stylánára*, and *Xysmalóbbium*.

ASPEN. See *Pópulus tremula*.

ASPERA, harsh, rugged.

ASPERÉLLA. See *Elymus hystrix*.

ASPERGILLUS, *Micheli*. From *aspergillum*, because of its resemblance to the brush with which the holy water is scattered in catholic ceremonies. *Linn.* 24, Or. 9, Nat. Or. *Botrytaceæ*. Mere mouldiness, found in patches upon rotten substances, and damp species in herbariums—*viridis, candidus, glaucus, laneus, mollis, penicillatus, virens, roseus*.

ASPEROCÓCCUS, *Lamour*. From *asper*, rough, and *kokkos*, seed; the seeds have a rough surface. *Linn.* 24, Or. 7, Nat. Or. *Fucaceæ*. This species is found on rocks—*compressus*.

ASPERGO, *Linnæus*. Derived, on account of its asperity, from *asper*, rough. *Linn.* 5, Or. 1, Nat. Or. *Boraginaceæ*. Altogether uninteresting, except in a botanical point of view. *procumbens*. Blue. 4, H. Tr. A. 1 Britain, rubbish.

ASPERÚLA, *Linnæus*. A diminutive of *asper*, rough; leaves. *Linn.* 4, Or. 1, Nat. Or. *Galiaceæ*. *A. arvensis* is a mere weed; all the rest of the species are pretty, and excepting *cynanchica*, remarkable for thriving under the shade of trees, in moist soil. The scent of *A. odorata* is quite pleasant, and the plant has been used for flavouring wine, perfuming clothes, &c. An infusion of *A. cynanchica* is astringent, and is used as a gargle. *A. odorata* is diuretic. *Synonymes*: 1, *A. rivialis*. 2, *Gálium glaucum*. 3, *A. repens*. 4, *Gálium humifusum*. 5, *A. incana*. See *Ernódea*.

ASPHÁLATHUS. See *Aspálathus*.

ASPHÉLÁNDRA. See *Aphelándra*.

ASPHODEL. See *Asphódelus*.

ASPHODELACEÆ. An order of herbaceous plants merged in *Liliaceæ*, from which they were found to differ in no essential characters.

ASPHÓDELUS, *Linnæus*. From *a*, privative, and *sphallo*, to supplant; a flower not to be surpassed. *Linn.* 6, Or. 1, Nat. Or. *Liliaceæ*.

These plants are of a bold aspect, and when in flower very ornamental; common soil suits them well, and young plants are obtained without difficulty from the roots. See *Ere-máurus*.

ASPICÁRPA, *Richard*. The form of the fruit resembles a shield; hence the name from *aspis*, a shield, and *karpos*, fruit. *Linn.* 1, Or. 2, Nat. Or. *Malpighiaceæ*. A twining plant of little interest, and easy cultivation.

urens. Apetal. 7, S. Da. Tw. 6 S. Amer. 1821

ASPIDÍSTRA, *Ker*. From *aspisidion*, a little round shield; the form of the flower. *Linn.* 8, Or. 1, Nat. Or. *Liliaceæ*. Curious plants, remarkable for producing their flowers under the surface of the earth. They grow in any common soil; and are increased by suckers.

ASPIDÍUM, *Swartz*. From *aspisidion*, a little buckler; because of the form of the indusium. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceæ*. One of the pretty and very interesting genera of Ferns. A mixture of loam and peat, and a sheltered situation, are very suitable for them; they are multiplied by seeds, or divisions. *Synonymes*: 1, *Nephródium acrostichoides*. 2, *N. decompsitum*. 3, *Cydäthea dentata*. 4, *Aspidium trapezoides*. 5, *Polypodium fragrans*. 6, *Nephródium unatum*.

ASSARACUS. See *Narcissus*.
ASSES EYES. See *Stizoidium urens*.
ASSONIA, *Cavanilles*. In honour of Ignatius d'Asso, a distinguished Spanish botanist. *Linnaeus*, 16, Or. 7, Nat. Or. *Sterculiaceae*. These plants are ornamental and of easy cultivation in sandy soil; cuttings are propagated without difficulty in sand or sandy loam, in heat.
popinea . . . White 6, S. Ev. T. 10 Bourbon 1820
viburnoides . . . White 6, S. Ev. T. 10 Bourbon 1822
ASSURGENT, rising upwards.
ASTARTEA, *Decandolle*. A mythological name;

Astarte, in Syria Venus. *Linn.* 18, Or. 2, Nat. Or. *Myrtiæcæ*. An ornamental species, three feet high; for culture, &c., see *Melaleuca*. *Synonyme*: 1, *Melaleuca fasciculata*. fasciculâris 1. . . White 5, G. Ev. S. 3 N. Holl. 1830

ASTËLLA, *R. Brown*. From *a*, without, and *stelechos*, a stem. *Linn.* Nat. Or. *Liliæcæ*. Curious plants. They thrive in the greenhouse in a light loamy soil, and produce abundance of off-sets; these, if detached and planted either in sawdust or very porous earth, with a slight bottom heat, will soon produce roots.

Banksii . . . Green 5, G. Her. P. 1 N. Zeal. 1837
Cunninghamii . Green 5, G. Her. P. 1 N. Zeal. 1859

ASTËLMA, *R. Brown*. From *a*, privative, and *stelma*, crown, in allusion to the construction of the fruit. *Linn.* 19, Or. 2, Nat. Or. *Asteræcæ*. Beautiful flowering plants, especially *A. cæmium*; they grow about three feet high, and thrive well in sandy peat soil; the pots must be well drained, and the soil carefully watered, or they do not progress freely, but on the contrary, the whole plant appears to languish; they delight in a situation near the glass, with a free admission of air; they increase by seeds, sown in light open soil, or cuttings planted in sand, or sandy soil, strike without difficulty. *Synonymes*: 1, *Elichrysium canescens*. 2, *E. frâgrans*. 3, *E. imbricatum*. 4, *Gnaphalium millefidrum*. 5, *Elichrysium retortum*. 6, *E. speciosissimum*. 7, *E. spirale*. 8, *E. Stæhelinæ*. 9, *E. variegatum*. See *Elichrysium*.

ASTERACÁNTHA. From *aster*, a star, and *acantha*, a spine. *Linn.* 14, Or. 2, Nat. Or. *Acanthæcæ*. "This is a handsome herbaceous greenhouse plant, seeds of which were sent to the Horticultural Society by Mr. M'Culloch, one of the gardeners to His Highness the Pacha of Egypt. If care is taken to reduce the vigour of the leaves, by not giving the plant too much shade and moisture, it becomes very handsome; but if it is permitted to run to leaf too much, its beauty is considerably impaired."—*Bot. Reg.* *Synonyme*: *Barleria longifolia*.

longifolia . . . Yellow 7, G. Her. P. 2 Egypt 1781

ASTERÆCÆ. A large order of plants bearing

compound flowers, and generally known as *Compositæ*.

ÁSTER, *Linncæus*. From *aster*, a star; the flowers resemble little stars from the rays of their circumference. *Linn.* 19, Or. 2, Nat. Or. *Asteræcæ*. Many species of this extensive genus are stately and handsome plants, such as *A. puniceus*, *pulchellus*, &c.: the expanded flowers, which appear in autumn when others are over, have been compared to a star, from the numerous rays of the circumference; they succeed in any soil or situation, and the herbaceous kinds increase abundantly from division. *A. Argophyllus* is a very rapid-growing species, and forms an ornamental tree when planted in the border of a conservatory: its leaves have also a fine fragrance resembling musk. *Synonymes*: 1, *A. pumilus*. 2, *A. pennsylvanicus*. 3, *A. umbellatus*. 4, *A. dracunculoides*. 5, *Solidago bicolor*. 6, *A. biennis*. 7, *A. Marylandica*. 8, *A. scopârtus*. 9, *A. pubescens*. 10, *A. carneus*. 11, *Grimælia siberica*. 12, *A. glaucus*. 13, *A. lucidus*. 14, *A. leucanthemus*. 15, *A. expansus*. 16, *A. parviflorus*. 17, *A. ledifolius*. 18, *A. villosus*. 19, *A. fruticulosus*. 20, *A. pinifolius*. 21, *A. amœnus*. 22, *A. alpinus ramosus*. 23, *A. glaucus cyâneus*. 24, *A. virgatus*. 25, *A. hungâricus*. 26, *A. virgânicus*. 27, *A. dentatus*, *ferrugineus*. 28, *A. pátulus*, *strictus*. 29, *A. lamacatifolius*, *macranthera*. See *Callistêmata*, *Erigeron*, *Eurýbia*, *Galatella*, *Hæxtonia*, and *Machæranthera*.

ASTEROLINON, *Link.* *Aster*, a star, and *linum*, flax. *Linn.* 5, Or. 1, Nat. Or. *Primulacæ*. See *Lysinachia*.

ASTEROMA, *Decandolle*. Supposed to be named from *aster*, on account of their resemblance to a star. *Linn.* 24, Or. 9, Nat. Or. *Uredinacæ*. The substances referred to this genus are merely cobweb-like lines, discernible upon the leaves of elm, ash, and sometimes apple-trees. — *Alchemilla*, *Fraxini*, *Padi*, *Prunella*, *Pjri*, *reticulata*, *Ulni*.

ASTEROPHORA, *Dittmar*. Named from *aster*, a star, and *phoreo* to bear. *Linn.* 24, Or. 9, Nat. Or. *Botrytacæ*. This curious production is said to be peculiar to rotten mushrooms—*lycoperdoides*.

ASTEROTRICH, *Decandolle*. From *aster*, a star, and *trich*, hair. *Linn.* 19, Or. 1, Nat. Or. *Asteracæ*. See *Apargia*.

ASTROTRICHION, *Lindley*. *Linn.* 16, Or. 8, Nat. Or. *Malvacæ*. *Synonyme*: 1, *Plagiánthus sidoides*—*sidoides* 1.

ASTILBE, *Hamilton*. From *a*, privative, and

stilbe, brightness; plants opaque. *Linn.* 10, Or. 2, Nat. Or. *Saxifragacæ*. This genus is ornamental, attaining six feet in height; it grows best in open peat, and is multiplied by divisions. *Synonyme*: 1, *Trarella biternata*. *decandra* 1 White .6, H. Her. P. Carolina. 1812 *rúbra* . . . Rose. .8, H. Her. P. 6 Bengal. 1856 *rivularis*.

ASTÍRIA. See *Astýria*.

ASTRÁGALUS, *Linnæus*. From *astragalos*, vertebra, or talus, the seeds being squeezed into a squarish form in some of the species. It is also a name given by the Greeks to one of their leguminous plants. *Linn.* 17, Or. 4, Nat. Or. *Rubacæ*. This genus is extensive, and the species are many of them very handsome, and well suited for the flower-garden; the herbaceous kinds merely require planting in the open air; the annual kinds sowing where they are to flower. *A. lotoides* is the handsomest, and should be sown in a moderately-heating hotbed, and planted out in the borders when sufficiently strong. *Synonymes*: 1, *A. carneus*; 2, *A. macrorrhizus*; 3, *A. viridescens*; 4, *A. malacophyllus*; 5, *Phaca vesicaria*; 6, *A. tragacanthoides*; 7, *A. tenuifolius*; 8, *A. sinicus*; 9, *A. micranthus*; 10, *Phaca trianguláris*; 11, *A. albidus*; 12, *A. alopecuroides*. See *Guldenstædtia*, *Oxytropis*, *Phaca*, and *Sophdra*.

ASTRANTHUS, Loureiro. From *astron*, a star, and *anthos*, a flower; segments radiating in a star-like manner. *Linn.* 8, Or. 1, Nat. Or. *Homaliæceæ*. This species is curious, it grows

about four feet high, and will succeed in any rich soil; cuttings in sand strike freely.

ASTRANTIA, Linnæus. From *astron*, a star, and *anti*, comparison; in reference to the appearance of the umbels of flowers. *Linn.* 5, Or. 2, Nat. Or. *Apiæceæ*. This is a pretty genus; the plants grow from half a foot to two feet high, and succeed well in the flower-border. *A. minor* requires to be grown in pots, and protected in a pit or frame in winter; increased by seeds. *Synonymes*: 1, *A. intermedia*; 2, *A. helleborifolia, heterophylla*. See *Dôndia*.

ASTRAPÆA, Lindley. Named from *astrape*, lightning, bright colour of the flowers. *Linn.* 16, Or. 7, Nat. Or. *Sterculiæceæ*. These are splendid plants, especially *A. Wallichii*, which may be considered one of the finest plants that ever was introduced; when loaded with its magnificent flowers, we think nothing can exceed its grandeur; there are other species in the collections about London, but we have not yet seen their flowers; they grow freely in any rich soil, or a mixture of loam and peat suits them very well; young cuttings planted in mould, and placed under a hand glass in heat, will soon strike root. *Synonymes*: 1, *Dômbeya mollis*. See *Dombeya*.

ASTROLÏBIUM, Decandolle. From *astron*, a star, and *lobos*, a pod; in reference to the disposition of the pods. *Linn.* 14, Or. 4, Nat. Or. *Fabæceæ*. Very pretty dwarf annuals, with an abundance of yellow flowers; they grow freely in any soil, and ripen abundance of seed, by which they may be multiplied. *Synonymes*: 1, *Ornithopus dârus*; 2, *O. ebracteatus*; 3, *O. repêndus*; 4, *O. scorpioides*.

dûrum 1 . . .	Yellow 7,	H. A.	½ Spain	. . . 1816

ASTROLÏMA, Robert Brown. From *astron*, a star, and *loma*, a fringe; the limb of the corolla being bearded. *Linn.* 5, Or. 1, Nat. Or. *Epacridæceæ*. This most beautiful genus

should be in every collection; they make little bushes about a foot high, and thrive best in sandy loam and peat mixed, with the pots well drained, and the plants cautiously watered; cuttings root in sand under a glass.

denticulatum . Pa. rd. 7, G. Ev. S. 1 N. Holl. . 1824
humifsum . Scarlet 7, G. Ev. S. 1 N. S. W. . 1807

ASTRÓPHYTUM. See *Echinocactus*.

ASTROSPORIUM, Kunze. From *aster*, a star, and *spora*, a spore, alluding to the form of the sporules. *Linn.* 24, Or. 9, Nat. Or. *Uredinaceae*. A minute curious black substance, discovered on dead beech branches—*Hoffmanni*.

ASTROTICHE. From *astron*, a star, and *thrix*, hair, in allusion to the calyx. *Linn.* 5, Or. 2, Nat. Or. *Apiaceae*. Evergreen shrubs, growing freely in sandy loam and peat, and easily increased by cuttings planted in sand under a glass. *Synonymes*: 1, *Eclax floccoides*.

floccosa 1 . . . White . 5, G. Ev. S. 1 N. Holl. . 1825
ledifolia . . . White . 5, G. Ev. S. 1 N. Holl. . 1830

ASTYRIA, Lindley. From *a*, privative, and *stéiras*, sterile; in allusion to the want of sterile stamens. *Linn.* 16, Or. 5, Nat. Or. *Byttneriaceae*. A rather interesting stove plant, with fine broad heart-shaped leaves, and close clusters of pink flowers. For culture, refer to *Rutzia*.

rosea . . . Pink . 5, S. Ev. S. 4 Mauritius . 1843

ASYSTASIA, Endl. Derivation unknown. *Linn.* 14, Or. 2, Nat. Or. *Acanthaceae*. Indian plants requiring stove heat, and light soil, with treatment, like the various species of *Ruellia*. *Synonymes*: 1, *Ruellia coromandeliana*, *R. secunda*, *R. intrusa*, *R. obliqua*, *Justicia gangetica*; 2, *Henfreyia scandens*, *Asystasia quaterna*, *Ruellia quaterna*.

coromandeliana 1 Purple . 9, S. Ev. S. 4 India. 1845
scandens 2 . . . Cream pk. 7, S. CH. S. 6 Africa 1843

ATACCIA, Kth. Malay name. *Linn.* 6, Or. 1, Nat. Or. *Taccaceae*. Perennials resembling the *Tacca* in habit, growing freely in any light soil, and increased by division. *Synonymes*: 1, *T. integrifolia*; 2, *Tacca cristata*, *T. Rafflesiana*. See *Tacca*.

aspera 1 . . . Dk. pur. 5, S. Ev. P. 1½ E. Indies 1810
cristata 2 . . . Dk. pur. 5, S. Ev. P. 1½ E. Indies 1840

ATALANTHUS, D. Don. From *atalos*, soft, and *anthos*, a flower; in reference to the softness of the flowers. *Linn.* 19, Or. 1, Nat. Or. *Asteraceae*. These are species of little beauty, and easy cultivation—*arborescens*, *pinnatus*, *spindus*.

ATALANTIA, Correa. The fruit of this shrub is of a golden yellow colour, whence the name from *Atalanta* the daughter of *Schœnus*; so swift that she promised to marry him who outran her, and by casting three golden apples in her way, she was overtaken by *Hippomenes*. *Linn.* 10, Or. 1, Nat. Or. *Aurantiacae*. This species is ornamental, and attains about four feet in height; it succeeds in any rich soil, and increases freely from cuttings in sand under a glass in heat. *Synonyme*: 1, *Limonium monophyllum*.

monophylla 1 . . . White 7, S. Ev. S. 4 E. Indies . 1777

ATAMASCO-LILY, see *Zephyranthes Atamasco*.

ATELÁNDRA. Derivation unknown. *Linn.* 14, Or. 1, Nat. Or. *Lamiaceae*. A pretty shrubby plant requiring a compost of loam and peat, and propagated by cuttings.

incana . . . Slate 6, G. Ev. S. 2 Swan River.

ATHAMÁNTA, Koch. Some of the species are found upon Mount Athamas in Sicily; whence the name. *Linn.* 5, Or. 2, Nat. Or. *Apiaceae*. These are chiefly weeds of very easy culture. *Synonymes*: 1, *Ligisticum Cervaria*. 2, *Cá-chrys panicifolia*. See *Babon*, *Cráidium*, *Ligisticum*, *Selinum*, and *Seseli*.

annua, *carvifolia*, *Cervaria* 1, *cretensis*, *incana*, *lasiantha*, *libanotis*, *panicifolia* 2, *sibirica*, *scirula*, *stricta*.

ATHANÁSIA, Cassini. From *a*, privative, and *thanatos*, death; in allusion to the length of time the flowers last. *Linn.* 19, Or. 1, Nat. Or. *Asteraceae*. This is a genus of Cape plants, growing from half a foot to two feet high; some of them are very pretty, and all succeed well in loamy soil, and increase from cuttings in sand under a glass. *Synonyme*: 1, *A. lanuginosa*. See *Lónas* and *Relhania*.

ATHEROPOGON, Willdenow. From *ather*, awn, and *pogon*, a beard; on account of the awns being bearded. *Linn.* 23, Or. 1, Nat. Or. *Graminaceae*. This is a species of very pretty grass; the cultivation and increase is the same as other grasses. *Synonyme*: 1, *Chlōris curtispéndula*, *Dindēra curtispéndula*.

aphrodites 1. Apetal . 8, H. Grass ½ S. Eur. . 1763

ATHEROSPERMA, Labillardière. From *ather*, awn, *sperma*, seed; the seeds being furnished with awns. *Linn.* 21, Or. 8, Nat. Or. *Atherospermaceae*. An ornamental tree, attaining the height of twenty-two feet; it grows in loam and peat, and may be increased from cuttings.

moschata . . . White . 6, G. Ev. T. 22 N. Holl. . 1824

ATHEROSPERMACEÆ. A small order nearly related to *Lauraceæ*, and possessing similar aromatic properties.

ATHRÍXIA, Ker. From *a*, privative, and *thrix*, hair; the receptacle being without hairs. *Linn.* 19, Or. 2, Nat. Or. *Asteraceae*. This is a rather low, ornamental Cape shrub, suc-

ceeding in a loamy soil, and increased from cuttings.

capensis . . Red . 4, G. Ev. S. 3 C. G. H. . 1821

ATHYRIUM, *Roth*. Derivation unknown. *Linn.* 24, Or. 1, Nat. Or. *Polyodiaceæ*. For culture, &c., refer to *Asplenium*. *Synonymes*: 1, *Allantodia spectabilis*, *Asplenium spectabile*; *Allantodia incisa*, *Asplenium incisum*; 2, *Aspidium filix-femina*, var. *irriguum*.

incisum 1. Yellow 7, S. Her. P. 2 East Indies.
irriguum 2. Brown 6, H. Her. P. 2 Brit., woods.

ATOCION. See *Silene*.

ATRACTOBOLUS, *Todd*. The bladder which contains the spores is fusiform, and is ejected from the base of the capsule as soon as the operculum is thrown off; whence the name, from *atraktos*, a spindle, and *boleo*, to eject. *Linn.* 24, Or. 9, Nat. Or. *Lycoperdaceæ*. Merely a white powdery substance found on wood, stones, &c.—*ubiquitarius*.

ATRACYLIS, *Linnæus*. The stems are light, and fit to make spindles; whence the name is derived from *atraktos*, a spindle. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. This species is fit only for general collections; culture and propagation easy.—*humilis*. See *Acarna*.

ATRAGENE, *Linnæus*. A name given to a species of *Clematis* by Theophrastus. *Linn.* 13, Or. 6, Nat. Or. *Ranunculaceæ*. This is a valuable and handsome genus of climbing plants, well adapted for training like *Clematis*, over bowers, trellis-work, and places where climbing plants are desirable; they grow in any common soil, and young plants may be obtained from cuttings under a glass, or by layers. Seeds are sometimes produced, which should be sown in pans, and potted off. *Synonymes*: 1, *Clematis verticillaris*; 2, *Atragene alpina*, *Clematis alpina*; 3, *Clematis occidentalis*; 4, *C. ochotensis*; 5, *C. sibirica*. See *Naravolia*.

ATTAR OF ROSES. A highly fragrant essential oil obtained by distillation from the petals of *R. moschata* and *damascena* and in small quantities from other roses.

ATTENUATE, } tapering gradually to a point.
ATTENUATED, }

AUBERGINES, or *Egg plants*. See *Solanum Melongena*.

AUBRIETIA, *Adanson*. In honour of M. Aubriet, a famous French botanical draughtsman. *Linn.* 15, Nat. Or. *Brassicaceæ*. These are very ornamental either in the flower garden or on rock-work, as they produce their purple flowers for such a length of time; they delight in an open dry situation, and are multiplied by dividing the roots, or cuttings, under a glass. *Synonymes*: 1, *Parsëtia deltoidæa*, *Allyssum deltoidæum*; 2, *Draba hesperidiflora*; 3, *Arabis purpurea*.

AUCUBA, *Kempfer*. The name of the shrub in Japan. *Linn.* 21, Or. 4, Nat. Or. *Cornaceæ*. Fine hardy shrubs, and one kind with beautiful blotched leaves is generally admired, particularly as it is clothed with leaves all the year; it is proper for standing singly on a small grass-plot, or in clumps amongst other shrubs in a conspicuous place. Cuttings root

readily under hand-glasses, in the common garden soil.

 himalaica . . . Apetal 6, H. Ev. S. 6 Himalaya.

AUCUPARIUS, having a tendency to attract birds.

AUDIBERTIA, *Bentham*. In honour of M. Audibert, of Tarascon, a celebrated nurseryman. *Linn.* 2, Or. 1, Nat. Or. *Lamiaceae*. Interesting little plants growing about two or three feet high, and bearing palish blue flowers. They grow in any common soil, and increase from seeds. *Synonymes*: 1, *Salvia carnosa, incana*; 2, *Salvia polystachya*. See *Mentha*.
 incana . . . Pa. bl. 8, H. Ev. S. 2 Colomb. 1827
 polystachya 2 . . . White 2, G. Her. P. 3 Calif. 1849

AUDOUINIA, *Brongniart*. In honour of V. Audouin, a profound entomologist and friend of Brongniart. *Linn.* 5, Or. 1, Nat. Or. *Bruniaceae*. An ornamental genus; for culture, &c., see the genus *Dibisma*. *Synonyme*: 1, *Dibisma capitata*.

- capitata . . . Purple 6, G. Ev. S. 1½ C. G. H. . 1790

AUGUSTA. See *Stifilia*.

AUGUSTUS, grand, stately, magnificent.

AULAX, *Bergius*. Named from *aulax*, a furrow; the under side of the leaves of the original species being furrowed. *Linn.* 22, Or. 4, Nat. Or. *Proteaceae*. This is a pretty genus: the species attain from one to two feet high and bear yellow flowers; they succeed best in a very sandy loam, with a good drainage; ripened cuttings taken off at a joint, and planted in a pot of sand, will strike root readily under a hand-glass.

- pinifolia . . . Yellow 8, G. Ev. S. 2 C. G. H. . 1780
 umbellata . . . Yellow 7, G. Ev. S. 2 C. G. H. . 1774

AURANTIACEÆ. The orange family. An order of considerable celebrity on account of the excellent fruit borne by many of the species.

AURANTIUM. See *Citrus*.

AURICOMUS, a head or tuft like hair, of a golden colour.

AURICULA. See *Primula*.

AURICULA JUDÆÆ. See *Evidia*.

AURICULARIA. See *Mentha* and *Theliphora*.

AURICULATE,

AURICULATED, } having ear-like appendages.

AURICLED,

AURICULATELY-SAGITTATE, eared at the base, so as to give the leaf the appearance of the head of an arrow.

AURICULATELY STEM-CLASPING, having auricles at the base of the leaves, clasping the stem.

AUSTRIAN OAK. See *Quercus*.

AVENA, *Linnaeus*. A name of obscure origin, supposed to be from the Celtic *aten*, from *etan*, to eat; whence our word oat has been obtained. *Linn.* 3, Or. 2, Nat. Or. *Graminaceae*. The species of this genus are easy of cultivation, and uninteresting in point of beauty. See *Arrhenatherum*, *Danthonia*, *Gaudinia*, *Tricheta*, and *Trisetum*.

alba, brevis, bromoides, fallax, fatua, flavescens, hirsuta, latifolia, planiculmis, præcox, pumila, sempervirens, setacea, versicolor.

AVENS. See *Gæum*.

AVERRHOA, *Linnaeus*. In honour of Averrhoes, of Cordova, in Spain, a celebrated physician. *Linn.* 10, Or. 4, Nat. Or. *Oxalidaceae*. The species are evergreen trees, singular for the fruit growing frequently on the trunk itself below the leaves: the flowers grow in racemes; the fruit is a five-celled berry. *A. Bilimbi* is a beautiful tree, with a green, fleshy, oblong fruit, the thickness of the finger, filled with a grateful acid juice; the substance and seeds not unlike those of the cucumber. Both species form handsome plants in our stoves, growing freely; and ripened cuttings root readily in sand, under a hand-glass.

- Bilimbi . . . Red yel. . . S. Ev. S. 8 E. Ind. 1791
 Carambola . . . Grn. red . . S. Ev. S. 12 Ceylon 1733

AVICENNIA, *Linnaeus*. In honour of Avicenna, a celebrated Persian philosopher and physician. *Linn.* 14, Or. 2, Nat. Or. *Myoporaceae*. The bark of *A. tomentosa* is in great use at Rio Janeiro for tanning, but it is not worth culture in this country—*tomentosa*.

AVICULAR, fit for bird's eat.

AVIGNON BERRIES. See *Rhamnus Olusii*.

AVOCADO PEAR. See *Pèrsea gratissima*.

AWL-SHAPED, narrow-pointed, like an awl.

AWLWORT. See *Subularia*.

AWNED, terminating in an awn, or sharp point.

AWNEDLY ACUMINATED, tapering to a point, and terminating in an awn.

AWNS, the beard of any thing.

AXIL, { literally the armpit; in plants applied to the angle formed by the union of the leaf and stem.

AXIL-FLOWERING, flowering in the axils of the leaves.

AXILLARY, placed in the axils or axillæ.

AXIS, the line, real or imaginary, that passes through any thing; the axis of a spike of flowers is the stem to which the flowers are attached.

AXONOPUS, *Beauvois*. Derived from *axon*, axis, and *pous*, a foot; in reference to the structure of the plant. *Linn.* 3, Or. 2, Nat. Or. *Graminaceae*. Species of grass, possessing little that is interesting.

- cimicinus . . . Apetal 7, H. Grass . 1 India . 1788
 aureus, digitatus.

AXYRIS, *Linnaeus*. From *axyros*, rough; on account of the leaves. *Linn.* 21, Or. 3, Nat. Or. *Chenopodiaceae*. The species of this genus are mere weeds, of the easiest culture, &c.—*amaranthoides, hybrida, prostrata*.

AYAPANA OF BRAZIL. See *Eupatorium*.

AYENIA, *Linnaeus*. In honour of the Duke d'Ayen, of the house of Noailles. *Linn.* 5,

Or. 1, Nat. Or. *Sterculiàcæ*. The species are curious, and grow from one to two feet high, producing purple and scarlet flowers; they require rich soil, and are multiplied by cuttings in sand.

levigata . . . Scarlet . S. Ev. S. 2 Jamaica.
pusilla . . . Purple 8, S. B. 1 Jamaica. 1756

AYER-AYER. See *Lánsium*.

AZADIRÁCHTA. See *Mèlia*.

AZÁLEA, *Linnæus*. From *azaleos*, dry, arid; habitation of the plant. *Linn.* 5, Or. 1, Nat.

Or. *Eriacææ*. This is a beautiful genus, universally admired for its white, orange, purple, scarlet, and variegated flowers, which are invariably produced in great profusion. They all thrive best in sandy peat or very sandy loam; and cuttings taken off close to the plant will root in sand, under a glass placed in heat, or they may be multiplied from seeds, &c. *A. indica* is a greenhouse plant of great beauty: it should stand out in the open air in summer, in a partially shaded situation, and in the winter in a cool part of the greenhouse. The beautiful varieties require the same treatment. *Synonyms*: 1, *Rhododéndron Cham-piónæ*. See *Rhododéndron*, and *Chamaledon*.

AZIMA. See *Monétia*.

AZUREA, sky-blue coloured.

B.

BABIANA, Ker. Derived by Mr. J. B. Ker, from *babianer*, because the roots are the favourite food of baboons. *Linn.* 3, Or. 1, Nat. Or. *Iridaceæ*. Handsome species, succeeding well in a mixture of sand, loam, and peat, freely watered when the plants are growing; but after flowering keep them dry till October, when they require repotting. During the suspension of water, keep them quite cool till new roots are made in the pots, after which a little more heat will cause them to flower strong. Protected from frost they succeed well in a south border, or the bulbs may be planted in spring and taken up again in autumn. Offsets or seeds. *Synonymes*: 1, *Ixia stricta*; 2, *I. villosa*; 3, *Glaucolus nanus*.

BABEER. See *Papyrus*.

BABINGTONIA, Lindley. In compliment to Charles Babington, Esq., Professor of Botany, Cambridge, a skilful botanist. *Linn.* 12, Or. 1, Nat. Or. *Myrtaceæ*, sect. *Leptospermeæ*. A very pretty greenhouse shrub, flowering during autumn and winter. It thrives in a mixture

of rich brown loam, peat, and leaf-mould; and half ripened cuttings root readily in sand, under a hand-glass, in heat. *Synonyme*: *Bæckia camphoræmæ*.

camphoræmæ Pinkish . 6, G. Ev. S. 7 Swan R. 1841

BABOONY. See *Santolina fragrantissima*.

BACAZIA, Flora Peru. In honour of George Bacaz, a botanist at Carthage. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. An interesting plant, growing well in peat and loam, and increased by cuttings.

spinosa . . . Pink . 6, G. Ev. S. 4 Peru . 1825

BACCATE, berried, fleshy.

BACCATUS, berry-bearing.

BACCCHARIS, Linn. By the Greeks, to a plant dedicated to Bacchus. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. This genus, called the Ploughman's Spikenard, consists of ornamental species, of easy culture and propagation. Loam and peat; cuttings in sand, under a glass. *Synonymes*: 1, *Molina parviflora*; 2, *Calea scoparia*.

BACKHOUSEA, Hooker. In compliment to Mr. James Backhouse, by whose travels in Australia and South Africa many interesting plants have been added to collections in this country. *Linn.* 12, Or. 1, Nat. Or. *Myrtaceæ*. Ac-

- cording to Mr. Backhouse, the species grows to a tree sixteen feet high, with slender branches, furnished with smooth, ovate, acuminate leaves. The white flowers are borne in corymbs, and are often produced on very small plants, soon after being struck from cuttings.—*Bot. Mag.*
- myrtifolia* . White . 5, G. Ev. S. 16 N. S. W. . 1844
- BACONIA**, *D. C.*, named in memory of Lord Bacon. *Linn.* 4, Or. 1, Nat. Or. *Cincho-naceæ*. For culture, see *Ixora*. *Synonyme* : 1, *Ixora nitida*.
- corymbosa* . White . 6, S. Ev. S. 4 Africa. . .
- BACTRIDIUM**, *Kunze*. From *bactron*, a staff, and *eidos*, resemblance. *Linn.* 24, Or. 9, Nat. Or. *Uredinaceæ*. Found on the horizontal surface of old stumps.—*atrovirens*.
- BACTRIS**, *Jacquin*. From *baktron*, a cane; on account of the small stems being used for walking-sticks. *Linn.* 21, Or. 6, Nat. Or. *Palmaceæ*. Fine species of *Palms*, thriving well in sandy loam, and only increased by seeds. *B. minor* produces a fruit the size of a common cherry, which contains an acid juice, not very pleasant to the taste. *B. major* produces a nut with a solid kernel, eaten in Carthage. See *Acrocodia*.

BALSAMINA, *Rivinus*. Called *balassan* by the Arabs, from which most probably the name balsamina has sprung. *Linn.* 5, Or. 1, Nat. Or. *Balsaminaceæ*. That beautiful and popular annual the garden balsam, with its white, red, pink, purple, lilac, and finely-variegated carnation-like flowers, belongs to this genus. All the species are ornamental, and may be grown with success by the following mode of treatment, recommended in Don's Miller's Gard. Dic. :—"The seeds of these plants should be sown on a moderate hotbed, in spring, and when the plants are about two or three inches high, they should be planted in separate small pots, taking care to shade them until they have taken fresh root, replacing them in the hotbed, after which they should have a moderate share of free air admitted to them when the weather is favourable, to prevent their being drawn up tall and weak; they should then be shifted from size to size of pots, until the plants have grown the size required, and when in flower they may be placed in the greenhouse, where they will make a very showy appearance, and seed freely." A light, very rich soil, composed of rotten dung, loam, and leaf mould, with a little sand, suits them best, plentifully watered. They do not root readily by cuttings; but may be increased abundantly from seeds, which in general ripen. The juice of the balsam used with alum is employed by the Japanese to dye their nails red. *Synonyme*: 1, *Impatiens balsamina*. See *Momodræa*.

BALSAMINACEÆ. A small order of well-known plants nearly related to *Oxalis*. It consists but of two genera, all the species are annual: the common balsam has long been a popular plant in our greenhouses.

BALSAMITA, *Desfon*. *Costmary*. From *balsamon*, balm; in reference to its strong balsamic smell. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. Plants of little interest and easy culture. *Synonyme*: 1, *Tunacæum annuum*. See *Artemisia* and *Tanacetum*.

<i>grandiflora</i>	Yellow	7, F.	B. 2 Algiers. 1821
<i>vulgaris</i>	Yel. gm.	8, H. Her. P. 3	Italy. 1568

ageratifolia, *annua* 1, *virgata*.

BALSAMODENDRON, *Kunth*. From *balsamon*, balsam, and *dendron*, tree. *Linn.* 8, Or. 1, Nat. Or. *Amyridaceæ*. An ornamental tree, growing well in sandy loam and peat, and ripened cuttings root freely in sand, under a glass, in heat. This tree yields the gum elemi of the East, which is distinct from the

American elemi. *Synonyme*: 1, *Amyris zeylanica*.

zeylanicum 1 White . 6, S. Ev. T. 30 Ceylon.

BALSAMONA. See *Cuphea Balsamona*.

BALTIMORA, *Linn.* In honour of Lord Baltimore, proprietor of Maryland. *Linn.* 19, Or. 4, Nat. Or. *Asteraceæ*. Uninteresting species, of easy culture—*alba*, *recta*.

BAMBOO CANE. See *Bambusa*.

BAMBUSA, *Schrader*. From *bambos*, its name in India. *Linn.* 6, Or. 1, Nat. Or. *Graminaceæ*. This genus contains the bamboo-cane; the species are interesting, and in rich loamy soil they grow rapidly to a great height in our stoves if well watered; they increase by off-sets. *B. arundinacea* is very useful for a very great variety of domestic purposes; in the E. Indies, cottages are almost entirely made of it, bridges, boxes, cups, baskets, mats, paper, and masts for boats, are also made of it. It is likewise employed for fences for gardens, &c., and it is commonly used instead of pipes for conveying water. The substance called tabasher, is a secreted siliceous matter, found at the joints of the bamboo. See *Melocanna* and *Nástus*.

BANJA. See *Quercus lanatus*.

BANKSIA, *Robert Brown*. In honour of Sir Joseph Banks, Bart. Pres. R. S.; a distinguished patron of science in general, particularly Natural History. *Linn.* 4, Or. 1, Nat. Or. *Proteaceæ*. This is a handsome and interesting genus. The species, to succeed well, must be treated in the following manner recommended by Sweet. "The pots must be well drained, which should be done in the following manner:—place a piece of potsherd about half way over the hole at the bottom of the pot, then lay another piece against it that it may be hollow, afterwards put some smaller pieces all around them, and some more broken very small on the top of these. All plants belonging to the *Proteaceæ* should be drained in the same manner, as the roots are very fond of running amongst the broken potsherds, and there is not so much danger of their being overwatered; care must be taken not to let them flag for want of water, as they seldom recover if allowed to get very dry; they should also be placed in an airy part of the greenhouse when in-doors, as nothing is more beneficial to them than a free circulation of air. Cuttings are generally supposed to be difficult to root, but they will root readily if properly managed; let them be well ripened before they are taken off; then cut them at a joint, and plant them in pots of sand, without shortening any of the leaves, except on the part that is planted in the sand, where they should be taken off quite close, the less depth they are planted in the pots the better, if they only stand firm, when the sand is well closed round them: then place them under hand-glasses in the propagating house, but not plunge them in heat, the glasses must be frequently taken off to give them air, and dry them, or they are apt to damp off; when they are rooted, the sooner they are potted off in small pots the better, as the sand is liable to canker their roots, if left too long in it; when potted off they should be placed in a close frame, but not on heat, as a bottom-heat will destroy their roots, when they must be hardened to the air by degrees. Plants raised in this way have better roots, grow faster, and flower sooner, than plants raised from seeds: in raising them from seeds, they should be sown in the same kind of soil as the plants are grown in, and placed in the greenhouse, or if it is in summer they will come up sooner, if placed out in the open air; they will soon make their appearance, when they should be potted off in small pots, for if left in the seed pots too long they are apt to die, and are more

difficult to move with safety." *Synonymes*: 1, *B. ledifolia*, *B. littoralis*.

- BARREN-WORT.** See *Epidéndrum*.
BARRINGTÓNIA, Forster. Dedicated to the Hon. Daines Barrington, F.R.S., &c. *Linn.* 16, Or. 8, Nat. Or. *Myrtacææ*. These very handsome, lofty-growing species are rather scarce in our stoves, and somewhat difficult to preserve in a healthy state. They must be grown in a moist, warm atmosphere, not by any means under 60 degrees, and planted in loam and peat mixed. Cuttings in a moist heat, root in sand, under a glass. *B. speciosa* yields a reddish brown drupe, the seed of which, mixed with the bait, inebriates fish. *Synonyme*: 1, *Stravádium racemósum*, *Eugenia racemósa*. See *Stravádium*.
 racemósa 1 . . . Red . . . 5, S. Ev. T. 20 Molucca Isles.
 speciosa . . . Scarlet 5, S. Ev. T. 20 E. Indies 1788
- BARTHOLÍNA, R. Brown.** In memory of the great Danish anatomist and physiologist, Thomas Bartholin. *Linn.* 10, Or. 1, Nat. Or. *Orchidæææ*. A singular species, very difficult to preserve in our collections. It requires a very sandy loam, and a light part of the greenhouse; it is very probable, that if they had

- more light in their growing season, they would be much easier preserved. *Synonyme*: 1, *Arethusa pectinata*.
 pectinata 1 . Wht. Ilac . 11, G. Ter. $\frac{2}{3}$ C. G. H. 1787
- BARTLINGIA**, *G. Don*. In honour of C. Bartling, who, with Wendland, wrote an ingenious dissertation on *Diósma*. *Linn.* 5, Or. 1, Nat. Or. *Cinchonaceæ*. See *Cryptandra*.
- BARTONIA**, *Pursh*. In honour of Dr. B. S. Barton, a botanist in Philadelphia. *Linn.* 12, Or. 1, Nat. Or. *Loasaceæ*. Beautiful plants with large yellow and white flowers, which open in the night, and effuse around them a delightful odour. Sweet says, they should be raised in a gentle hotbed, and when up, potted, and protected in the greenhouse in winter. *Synonyme*: 1, *B. decapétala*. See *Centaurélla*.

- BARTRAMIA**, *Hedwig*. So called in honour of J. Bartram, an Anglo-American, to whose researches in N. America the gardens of Europe owe many of their finest trees. *Linn.* 24, Or. 5, Nat. Or. *Bryaceæ*. This is an elegant genus of mosses, remarkable for their green leaves and spherical capsules. The genus approaches nearly to *Brýum*, but differs in almost every species having spherical capsules, and the sixteen broad segments of the inner peristome, instead of being entire, or only perforated, are cleft like the teeth of a *Dicranum*.—See also *Triumfetta*. *Synonyme*: 1, *Brýum fontánium*—arcuata, fontána, f. major 1, f. murchica, gracilis, Halleriana, ithyphýlla, pomiformis, p. major, p. minor.
- BARTSIA**, *Linn.* Dedicated to his friend John Bartsch, M.D. *Linn.* 14, Or. 2, Nat. Or. *Scrophulariaceæ*. Curious plants, of difficult cultivation. They succeed best in a shady bog border, or in pots kept moist; they also do pretty well in a moderately exposed situation sown in sandy soil. See *Castilleja*, *Euchroma*, and *Rhinanthus*.

BATEMÁNIA, Lindley. In compliment to James Bateman, Esq., of Knypersley Hall, Cheshire, an ardent collector and successful cultivator of *Orchidácea*, and author of that splendid work, the "Orchidácea of Mexico and Guatemala." *Linn.* 20, Or. 1, Nat. Or. *Orchidácea*. A very pretty species, well deserving a place in every collection; it somewhat resembles a *Maxillaria*, with a pendulous raceme of flowers from the base of the pseudobulbs; and the sepals and petals are brownish-purple within, green without, and a white labellum. It requires the same treatment as *Stenhopéa*, and other similar genera.

Colléyi . . . Pur. grn. 8, S. Epi. † Demerara . 1834

BATRACHOSPÉRMUM, Agardh. From *batrachos*, frog, and *sperma*, seed. Name refers to the situation where the species grow. *Linn.* 24, Or. 7, Nat. Or. *Fucácea*. The species are interesting, having more or less the appearance

of a necklace, especially *B. moniliforme*; they grow mostly in marshes—*moniliforme*, *m. deltersum*, *m. purpurascens*, *m. simplicius*, *m. stagnale*: *vágum*, *v. tenuissimum*.

BÁTSCHIA, Michaux. In honour of John George Batsch, a professor of botany in Germany. *Linn.* 5, Or. 1, Nat. Or. *Braginácea*. Pretty dwarf species, succeeding in common soil, and increased by seeds or divisions. *Synonymes*: 1, *Lithospermum canescens*; 2, *L. hirtum*, *Bátschia carolinensis*.

canescens 1. Yellow 7, H. Her. P. 1½ N. America 1826

longiflora. Yellow 6, H. Her. P. ½ Missouri . 1812
sericea . Yellow 7, H. Her. P. ½ N. America 1825

BATTÁRREA, Persoon. Named in honour of Antonia Battarra. *Linn.* 24, Or. 9, Nat. Or. *Lycoperdácea*. A very curious plant, found only in Britain, where it is very rare. The volva or wrapper, is about the size of a hen's egg, originally in three slightly coriaceous layers, hollow internally, which rises suddenly to its full height of about twelve inches; the stalk carries up on its summit full half the innermost layer of the volva, which is white and smooth within, and covered externally with copious brown sporules, intermixed with fibre—*phaloides*.

BAUDÍNIA. See *Calothámnus*.

BAÜERA, Andr. In memory of Francis and Ferdinand Bauer, botanical draughtsmen of the highest celebrity. *Linn.* 13, Or. 2, Nat. Or. *Hydrangéa*. Pretty, free-flowering species, of easy culture; a mixture of sand and peat suits them, and young cuttings root readily in sand or soil, under a glass.

humilis . . Red . 9, G. Ev. S. 1 N. S. W. 1804
rubraefolia . Pink . 9, G. Ev. S. 1½ N. S. W. 1793

BAUHÍNIA, Plumier. In memory of John and Caspar Bauhin, botanists of the sixteenth century. *Linn.* 10, Or. 1, Nat. Or. *Fabácea*. Showy interesting species, some of them particularly so when in bloom; they succeed well in a mixture of sand, loam, and peat; and cuttings taken when the wood is neither ripe nor very young (observing to dress off the leaves), and planted in sand, under a glass in a moist heat, will strike root. The dried leaves and young buds of *B. tomentosa* are prescribed in dysenteric affections; the bark of *B. variegata* is used in tanning and drying leather, and that of *B. racemosa* is employed in making ropes. *Synonymes*: 1, *B. anguina*; 2, *B. retusa*, *divaricata*; 3, *B. aculeata*.

BELLÍNIA. See *Saracha*.

BELLÛCIA. See *Blæca*.

BELÛNIA, Carmichael. From *belone*, a needle; in allusion to the acicular filaments. *Linn.* 24, Or. 7, Nat. Or. *Fucacææ*. Found on decaying marine *Algae*.—*torulosa*.

BELOPÉRONE, Nees. Named in reference to the arrow-shaped connectivum; from *belos*, an arrow, and *perone*, a band, or strap. *Linn.* 2, Or. 1, Nat. Or. *Acanthacææ*. A pretty species, easily cultivated, and multiplied by cuttings.

oblongata . Ro. pur. . 9, S. Ev. S. 3 Brazil . 1832

BENCÃO DE DIOS. See *Abutilon esculentum*.

BENGAL QUINCE. See *Egle marmelos*.

BENINCÁSA, Savi. From Count Benincasa, an Italian nobleman. *Linn.* 23, Or. 1, Nat. Or. *Cucurbitacææ*. An uninteresting species, of the easiest culture. *Synonyme*: 1, *Cucurbita cerifera*—*cerifera* 1.

BENJAMIN TREE. See *Ficus Benjamina*.

BENJAMIN TREE. See *Laurus Benzoin*.

BEN NUT TREES. See *Moringa*.

BEN OIL TREE. See *Moringa aptera*.

BENT-GRASS. See *Agrstis*.

BENTHÁMIA, Lindl. In honour of George Benthám, once secretary of the London Horticultural Society. *Linn.* 4, Or. 1, Nat. Or. *Cornacææ*. A very handsome genus, sufficiently hardy to bear our severest winters, if guarded from cold cutting winds, and unusually sharp frosts, by a mat. The flowers, which appear in profusion during summer, are succeeded by an abundance of large, globular, reddish-yellow, eatable fruit, of an insipid though not unpleasant taste. It succeeds best in common garden loam, and is easily increased by seeds or layers. The best situation for it is against a south wall, where it grows freely, and looks well. *Synonyme*: 1, *Cornus grandis*. See also *Amsinckia*.

fragifera . Ysh. red 8, H. Ev. S. 3 E. Indies . 1825
 japonica 1. Ysh. red 8, H. Ev. S. 3 Japan . . 1847

BENZONIN. See *Laurus Benzoin*.

BERÁRDIA, Villars. Named after Mr. Berard, a botanist of Grenoble. *Linn.* 19, Or. 1, Nat. Or. *Asteráceæ*. Pretty species, of very easy culture. *Synonymes*: 1, *Berania paleacea*; 2, *B. phylloides*; 3, *Arctium lanuginosum*, *Onopordum rotundifolium*.

paleacea 1 . . . White 7, G. Ev. S. 1 1/2 C. G. H. 1791

 subcaulis 3 . . . Purple 7, H. Her. P. 1 1/2 Italy . . 1791

BERBERIDACEÆ. *Berberis* is the principal genus of this order, the species of which are all ornamental.

BÉRBERIS, Linn. From *berberys*, its name in Arabia. *Linn.* 6, Or. 2, Nat. Or. *Berberidacææ*. This genus comprises the common barberry; all the species are ornamental, and thrive in common garden soil, but prefer one rather light; cuttings or layers takè root freely in the open ground. The fruit makes an agreeable jelly, and, as a medicine, is considered an agreeable and grateful astringent acid. The bark of the root boiled is used in Poland to die yellow; the colour is best when boiled in ley. *Synonymes*: 1, *chitria*; 2, *vulgàris ibérica*; 3, *Mahonia nervosa*, *M. glumacæa*; 4, *atrovirens*; 5, *glauca*; 6, *angulosa*; 7, *acanthifolia*; 8, *buxifolia*, *microphylla*, *inermis*. See *Mahonia*.

BERBERRY. See *Berberis*.

BERCHEMIA, *Necker*. In honour of M. Berchem, a French botanist. *Linn.* 5, Or. 1, Nat. Or. *Rhamnaceæ*. The species succeed in sandy loam and peat, and are interesting. They increase either by cuttings or seeds. To the roots of *B. volubilis*, antisymphilitic virtues are ascribed. *Synonymes*: 1, *Rhâmnus lineatus*, *Enôplia lineata*; 2, *Rhâmnus volubilis*, *Enôplia volubilis*.

lineata 1 . Green . 6, G. Ev. Cl. 8 China . 1804
volubilis 2 . Green . 6, H. De. Tw. 10 Carolina 1714

BERCKHËYA, *Greville*. Dedicated to John Le-franc de Berckhey, a Dutch botanist. *Linn.* 19, Or. 3, Nat. Or. *Asteraceæ*. The species are ornamental, and succeed well in a mixture of loam and peat; cuttings planted in common soil, root readily under a glass.

BERKËLEYA, *Greville*. In honour of the Rev. Mr. Berkeley, an English cryptogamist. *Linn.* 24, Or. 7, Nat. Or. *Diatomaceæ*. A very small, interesting marine production—*frágilis*.

BERMUDA CEDAR. See *Juniperus bermudiâna*.

BERNHËRDIA. See *Psidium*.

BËRRYA, *Rox.* In memory of Dr. Berry, who first introduced it into Calcutta. *Linn.* 13, Or. 1, Nat. Or. *Tiliaceæ*. An ornamental tree, succeeding well in rich loam and peat mixed; cuttings planted in sandy soil root well under a glass. *B. amomilla* furnishes the fine light timber employed in making the Massoola boats of Madras, and called Trincomalee. See *Tetranthëra*.

amomilla . Yel. gr. . 7, S. Ev. T. 20 E. Ind. . 1800

BERRY-BEARING ALDER. See *Rhâmnus Frân-gula*.

BERRIES, JUNIPER. See *Juniperus*.

BERTERËA, *Dec.* Named in compliment to C. J. Bertero, an esteemed friend of De Candolle's. *Linn.* 15, Nat. Or. *Brassicaceæ*. The species are ornamental, and of easy cultivation; sandy soil suits them, and young plants are obtained either from seeds or cuttings. *Synonymes*: 1, *Farsëtia incana*; 2, *Farsëtia mutabilis*.

incana 1 . . White . 7, H. B. $\frac{1}{2}$ Europe . 1640
mutabilis 2 . Wh. pk. 7, H. Her. P. 2 Levant . 1802
obliqua . . . White . 7, F. Ev. S. 1 Sicily . . 1823

BERTHOLËTIA, *Humb.* and *Bonp.* In memory of L. C. Berthollet, a meritorious chemist. *Linn.* 13, Or. 1, Nat. Or. *Lecythidaceæ*. This tall ornamental tree yields the nuts known in shops under the name of Brazilian nuts. It succeeds in sand, peat, and loam, and may be increased by cuttings in sand, or in a sandy soil.

excelsa . . . White . 6, S. Ev. T. 100 Para

BERTOLËNIA, *Raddi*. Named in honour of Ant. Bertoloni, an Italian botanical author. *Linn.* 10, Or. 1, Nat. Or. *Melastomaceæ*. Only one species of this genus is introduced—the *maculata*, a pretty little creeper; it grows in light soil, is increased by cuttings, and should be well supplied with water when in growth. See *Lasiorrhiza*, *Lippia*, and *Povomita*.

maculata . . . Rose . 6, S. Ev. Gr. $\frac{1}{2}$ Brazil . 1848

BËRULA. See *Stum*.

BËRËLIA, *Brongniart*. Dedicated to the celebrated chemist Berzelius. *Linn.* 5, Or. 1, Nat. Or. *Bruniaceæ*. These pretty species delight in a mixture of rather sandy peat and loam. Cuttings take readily in sand, under a glass. *Synonymes*: 1, *Brunia abrotanoides*; 2, *B. lanuginosa*.

abrotanoides 1 White . 6, G. Ev. S. 1 $\frac{1}{2}$ C. G. H. . 1787

BESOMES are often made of the common Ling (*Erica vulgaris*), and for some purposes are better than those made from birch twigs.

BÉSSERA, *Schultz.* Named in honour of Dr. Besser, professor of botany at Brody, and author of an Enumeration of the Plants of Volhynia, Podolia, &c. *Linn.* 19, Or. 3, Nat. Or. *Liliacæ*. These plants require to be grown in a mixture of peat and sand, to be liberally supplied with water, and kept dry and cool when the leaves wither and fall off, until next season. They are propagated by offsets. *Synonyme*: *Pharium fistulosum*. See also *Pulmonaria*.

BÊTULA, *Linn.* From *betu*, its Celtic name. *Linn.* 21, Or. 4, Nat. Or. *Betulacææ*. This is a popular genus, and best known by its common name, the birch. The species are for the most part lofty-growing trees, and very ornamental. *B. péndula* has a graceful and pleasing growth; the species *pàmila* and *nàna* are dwarf-growing kinds, but very pretty and interesting. They thrive in any soil, and are commonly increased by grafting or budding on the larger and more plentiful kinds, the latter being raised from seed; the dwarfest species are best when produced from layers. *Synonymes*: 1, *Alnus viridis*; 2, *Bêtula urticifolia*; 3, *B. laciniata*; 4, *B. péndula*.

BÊTULACÆÆ. A small order of well known trees, consisting of the various kinds of Birch and Alder.

BÊTULASTER. See *Bêtula*.

BETULINE. Birch Camphor, a peculiar resinous substance, principally furnished by the black birch tree.

BÉTULUS. See *Carpinus Bétulus*.

BHOJPÁTRRA or **BHOORJAPÁTRRA.** See *Bétula Bhojpátrra*.

BHOORJA. See *Bétula Bhojpátrra*.

BIALÀTA, two-winged.

BHABHUR. See *Eriphorum comdsum*.

BIÀRUM, *Smith.* From *bis*, twice, and *aron*, the Arum. *Linn.* 21, Or. 7, Nat. Or. *Aracées*. Hardy border flowers, growing in common garden soil, and propagated by division. *Synonyme*: 1, *Arum gramineum*.

gramneum 1 . Purple . 4, H. Her. P. 1 S. Eur. 1834
tenuifolium . Dk.pur. 4, H. Her. P. 1 S. Eur. 1870

BHADLEE. See *Panicum pilosum*.

BIBÉRI. See *Nectandra Rodièri*.

BICEPS, having two heads.

BICORNIS, two-horned.

BIDENS, so called from *bis*, twice, and *dens*, a tooth; alluding to the seed. *Linn.* 19, Or. 1, Nat. Or. *Asteracées*. These species are mostly uninteresting; a few however are worth cultivating. They grow readily in common soil, and increase from seeds, suckers, or divisions, according to their habits and duration. *Synonymes*: 1, *Coreöpsis coronata*; 2, *B. odorata*; 3, *B. tripartita*. See *Melanthera*, *Osteospermum*, *Petrobium*, and *Salmea*.

BIEBERSTEINIA, *De Candolle.* In honour of Marschall Von Bieberstein, a celebrated writer on the Russian Flora. *Linn.* 10, Or. 4, Nat. Or. *Ruticées*. For culture refer to *Zygo-phylllum*.

odora . . . Yellow . 5, F. Her. P. 1 Altaia . 1837

BIENNIAL, of the continuance of two years. A plant is said to be biennial which takes two years to mature its fruit, and then dies.

BIFARIOUS, disposed in two rows.

BIFID, opening with a cleft nearly divided in two.

BIFORIS, *Sprengel.* The name is compounded from *bis*, double, or two; and *foris*, a flap; in reference to the shape of the fruit. *Linn.* 5, Or. 2, Nat. Or. *Apiacées*. Uninteresting species, of the simplest culture. *Synonymes*: 1, *Coriandrum testiculatum*; 2, *C. testiculatum*—*radians* 1, *testiculatum* 2.

BIFRENÀRIA, *Lindley.* So named from *bis*, twice, and *frænum*; in allusion to the double strap or frænum that connects the pollen masses with their gland. *Linn.* 20, Or. 1, Nat. Or. *Orchidacées*. A genus of very pretty plants when in bloom, especially *B. aurantiaca*, the flowers of which are deep orange yellow, mottled with dark brown spots. For culture and propagation see *Macillaria*, to which the genus is near akin. *Synonymes*: 1, *Macillaria atropurpurea*; 2, *Macillaria aureofalva*; 3, *M. racemosa*; 4, *M. vitellina*, *barbata*. See also *Stenocryne*.

BIFRONS, two-faced.

BIGELÒVIA, *Spr.* Named in honour of Professor Bigelow, of N. America; for species refer to *Spermacées*. See *Borreria*.

BIGEMINATE, twin, each division bearing a pair of leaflets.

BIGLÀNDULAR, having two or double glands.

BIGLUMIS, having two husks, or chaffy scales.

BIGNONIA, *Linn.* In memory of Abbé Bignon, librarian to Louis XIV. *Linn.* 14, Or. 2, Nat. Or. *Bignoniacées*. The species are trees or shrubs, inhabitants of hot climates. The leaves are opposite, pinnate, ternate, or conjugate; the flowers in panicles, large and handsome, of various colours, red, blue, yellow, or white, and eminently beautiful. The stove sorts grow freely in loam and peat, and young cuttings root in sand under a hand-glass. The species grow in any soil, but will not flower well unless the situation be warm; they are increased by cuttings of the roots, by layers, or by young cuttings in a gentle heat, under a hand-glass or frame. *B. radicans* is a well-known much-admired species, capable of living in the open air in this country against a wall. The young shoots of *B. chirre* are sometimes manufactured into wicker-work. *Synonymes*: 1, *Jacaranda alba*; 2, *B. heterophylla*; 3, *Jacaranda echinata*; 4, *tomentosa*; 5, *Millingtonia hortensis*; 6, *Incarvillea tomentosa*. See *Adenocalymma*, *Æschinanthus*, *Amphibidium*, *Chelidonium*, *Gelsemium*, *Jacaranda*, *Paulbônia*, *Phyllanthron*, *Spathodea*, and *Tecoma*.

BIGNONIACEÆ. The tropics of either hemisphere are the chief station of this noble-looking order, whose trumpet-shaped flowers are the glory of the places which the species inhabit. The great beauty and large size and gay colours of the flowers are amongst the most striking objects in a tropical forest.

BIBAL. See *Heliconia Bibai* and *Psittacdrum*.

BIJUGUS, yoked together, coupled.

BILABIATE, having two lips.

BILBERRY. See *Vaccinium myrtillus*.

BILOBED, divided so as to form two lobes.

BILIMBI TREE. See *Avérrhoa Bilimbi*.

BILLARDIÈRA, Smith. In honour of Julien Billardièra, a French botanist and traveller. *Linn.* 5, Or. 1, Nat. Or. *Pittosporacæ*. Handsome climbers, especially *B. longiflora*, which is an abundant flowerer, and produces a handsome blue berry. Good rich open loam mixed with peat suits them well, and cuttings root in

sand, under a glass; they may also be raised from seed. See *Sollya* and *Pronaya*.

BINATE, two growing together.

BINDWEED. See *Convolvulus*.

BINDWEED. See *Smilax aspera*.

BIOPHYTUM, Decan. So called from *bios*, life, and *phyton*, a plant; in allusion to the irritability of the leaves and pods, which latter open when touched. *Linn.* 10, Or. 4, Nat. Or. *Oxalidacæ*. A very pretty, and when grown as in China nine inches high, a remarkable annual; the leaves are prettily pinnated, which with the rich yellow flowers, have an interesting appearance. Cultivated in common soil, and raised plentifully from seeds. *Synonyme*: 1, *Oxalis sensitiva*.
sensitivum 1 . . . Yellow . 7, H. A. ½ China . . 1823

BIOTA, Don. Named after M. Biot, a celebrated French astronomer. *Linn.* 21, Or. 8, Nat. Or. *Pinacæ*. Evergreen shrubs, resembling *Cupressus*, and requiring similar treatment. *Synonymes*: 1, *Cupressus pendula*, *C. patula*,

- Thuja pèndula*, *C. filiformis*; 2, *Thuja nepalensis*, *T. tartarica*, *T. orientalis*.

BITTER OAK. See *Quercus Cèrris*.

BITTER SWEET. See *Solanum Dulcamara*.

BITTER VETCH. See *Orobus*.

BITTER WOOD. See *Quassia amara*.

BITUMINOUS, pitch-like.

BIVAGINATE, having double sheaths, or covers.

BIVONÆA, *Decan*. Dedicated to Antoine Bivona Bernardi, a professor of botany in Sicily. *Linn*. 15, Nat. Or. *Brassicaceæ*. A pretty species, the seeds sown in sandy dry soil, where they are intended to remain, will succeed well. *Synonyme*: 1, *Thlaspi luteum*—*lutea*, 1.

BÍXA, *Linn*. Its name in South America. *Linn*. 13, Or. 1, Nat. Or. *Flacourtiaceæ*. These trees, if grown from seed, become of a large size before they can be got to flower. But if cuttings be taken from a flowering plant and struck, they may be brought into bloom when small plants. Loam and peat suit them well, and cuttings root freely in sand, under a glass, in heat.

BLESSED THISTLE. See *Centaurea benedicta*.
BLËTIA, Ruiz and Pavon. In honour of Don Louis Blet, a Spanish physician and botanist. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. This is, when in flower, a handsome genus of tuberous-rooted plants. They succeed well when grown in a mixture of sandy peat and light

loam, with the pots well drained, and treated as follows:—As soon as the leaves die down, remove the plants to a cooler house, where they should be kept dry for three or four months; then they must be repotted, and placed in a brisk moist heat; and when growing, liberally supplied with water. They are easily increased by dividing the roots, which should be done at the time of potting. *Synonymes*: 1. *Limodrum album tuberosum*; 2. *B. pallida*, *Cymbidium flatum*; 3. *C. hycinthinum*; 4. *C. altum*, *Limodorum altum*; 5. *B. Shephérdii*.

BLIGHIA, *Hortus Kew*. Dedicated to Capt. Bligh, who first carried the bread-fruit to the W. Indies. *Linn.* 8, Or. 1, Nat. Or. *Sapindacææ*. This is called Akee Tree, and is a plant much esteemed in Africa and the W. Indies on account of its fruit, which is as large as a goose's egg, and of a reddish or yellow colour; the aril is eatable, of a sub-acid flavour, and considered very grateful, particularly in the W. Indies. It grows in loam and peat; and cuttings, with the leaves not taken off, root in sand, under a glass.

aspida . . . White . 6, S. Ev. T. 20 Africa . 1793

BLIGHT, a vague term, signifying a pestilence amongst plants, caused by the attack of insects, or parasitical fungi; or by some epidemic affection of the atmosphere.

BLIMBING. See *Averrhoa Bilimbi*.

BLISTERED, the surface being raised, as the skin is when blistered.

BLITUM, *Linn.* The derivation is doubtful, but it is most probably taken from *bliton*, insipid. *Linn.* 1, Or. 2, Nat. Or. *Chenopodiacææ*. These plants are only worth cultivation for their strawberry-like fruit which succeeds the flowers; hence the trivial name Strawberry Blite; they succeed well sown in the open ground. See also *Amarantus Blitum*.

BOLE, trunk of a tree.

BOLÆTUS, Dillenius. Named from *bolos*, a mass, in reference to its massy or globular form. *Linn.* 24, Or. 9, Nat. Or. *Agaricææ*. Curious productions, found in woods and groves, pastures, and on old trees. The species are succulent, and have their parts in the greatest perfection of any Fungi. *B. granulatus* is eatable, as is *B. sub-tomentosus*, and *B. edulis*; the last is excellent when cooked. The *Bolæti* when wounded, heal much in the same manner as the flesh of animals. *Synonymes*: 1. *B. rubellus*—*calopus*, *cyanescens*, *edulis*, *lactiflorus*, *laricinus*, *viridus* 1, *luteus*, *pipératus*, *scaber*, *s. aurantiacus*, *s. bovinus*, *subtomentosus*, *s. sanguineus*, *variegatus*.

BOLEUM, Desvaux. The name is taken from the round pods, and is derived from *bolos*, a ball. *Linn.* 15, Nat. Or. *Brassicææ*. An ornamental species, succeeding best in rather sandy peat; it ripens seed, from which it may be plentifully increased. *Synonyme*: 1. *Vella aspera*.

asperum . . .	Cream . . .	6, F. Ev.	S.	1 Spain . . .	1818

BOMBACEÆ. See *Sterculiææ*.

BOMBAX, Linn. The name is derived from *bombax*, cotton; in allusion to the wool in the pods. *Linn.* 16, Or. 8, Nat. Or. *Sterculiææ*. The genus is trivially named the Silk Cotton Tree, and the species thrive well in a sandy loamy soil; half-ripened cuttings taken off at a joint, and planted in sand, under a glass, in a moist heat, root readily. The seeds of many of the species are enveloped in long hairs, like those of the true Cotton; it is found, however, that they cannot be manufactured, in conse-

quence of no adhesion between the hairs. The woolly coat of the seeds of some of the species is employed in different countries for stuffing cushions, &c. The trunk of *B. Ceiba* is spiny, and said to be one of the highest trees in both Indies; the wood is light and of little value, but is sometimes used for canoes. The wood cut into boards, and steeped some time in lime-water, will endure the action of the air many years. The cotton in which the seed is enveloped, is used by the poor inhabitants for stuffing chairs, pillows, &c., but is seldom or never used for beds, it being thought unwholesome to sleep upon. *Synonymes*: 1. *guinatum*; 2. *heptaphyllum*; 3. *heptaphyllum*. See *Cochlospermum*, and *Eriodendron*.

BORDERLET. See *Limbœria*.

BORKHAUSIA, Bohmer. Dedicated to Moritz Borkhausen, a German professor of botany.

Linn. 19, Or. 1, Nat. Or. *Asteraceæ*. Species of no beauty except *B. alpina*, which is rather pretty and interesting; they are all easily cultivated. *Synonymes*: 1, *Crepis alpina*; 2, *Hieracium stipitatum*; 3, *Lagobseris bursifolia*; 4, *Crepis fetida*; 5, *Lagobseris intybacea*; 6, *L. leontodontoides*; 7, *Crepis nicænsis*; 8, *Lagobseris raphanifolia*; 9, *Crepis rubra*; 10, *C. senecioides*; 11, *L. versicolor*. See *Mgoseris*.

BORONIA, *Sims*. In memory of Francis Boroni, an Italian attendant of Dr. Sibthorp. *Linn.* 8, Or. 1, Nat. Or. *Rutaceæ*. A very pretty and interesting genus of New Holland plants. The species flower remarkably free, and some may be seen in bloom at almost any time of the year. They grow best in sandy peat mixed with a few broken shreds, and the pots, which should not be large, must be judiciously drained, as the plants are very liable to suffer from over watering. Cuttings taken at a joint, planted in sand, and placed under a glass in a frame, observing to dry up the damp now and then, will, if carefully tended, make roots. *Synonymes*: 1, *B. anemonefolia*; 2, *B. ledifolia*; 3, *B. terminiflora*, *grandiflora*, *laurifolia*, *pilosa* 4, *mollina*.

BORRICHIA, *De Candolle*. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. See *Diomedea*.

BORYA, *Willdenow*. Dedicated to Colonel Bory de St. Vincent, a French traveller and promoter of natural history. *Linn.* 22, Or. 2, Nat. Or. *Euphorbiaceæ*. The species are uninteresting, and easily cultivated—*acuminata*, *distichophylla*, *ligustrina*, *nitida*, *porulosa*, *prinosides*, *retusa*, *scorpioides*.

BOSCIA, *Lamarck*. Dedicated to Louis Bosc, a French professor of agriculture. *Linn.* 11, Or. 1, Nat. Or. *Capparidaceæ*. The species is ornamental, and may be referred to *Cratæva* for culture, &c. *Synonyme*: 1, *Poddria Senegalensis*.

senegalensis . White . . 4, S. Ev. S. 3 Senegal 1824

BOSEA, *Linn.* In compliment to Ernest Gottlieb Bose, a professor of botany in Germany. *Linn.* 5, Or. 2, Nat. Or. *Ulmaceæ*. An ornamental species, succeeding in loam and peat mixed; and cuttings in sand, under a glass, placed in heat strike readily.

Yervandra . Rufous . . G. Ev. S. 8 Canaries 1738

BOSSIA, *Ventenat*. In honour of M. Bossieu Lamartinière, a French botanist who accompanied the unfortunate La Peyrouse round the world. *Linn.* 16, Or. 6, Nat. Or. *Fabaceæ*. The species are neat, elegant plants when in flower, and will thrive best in a mixture of turf, loam, peat, and sand; but care should be taken that the pots are well drained, as nothing injures them sooner than too much water. Cuttings of the half-ripened wood will strike if planted in a pot of sand under a glass. *Synonymes*: 1, *Bossia rufa*; 2, *B. lanceolata*, *Platylóbium lanceolatum*, *P. ovatum*; 3, *Bossia lenticularis*; 4, *Platylóbium scolopendrium*; 5, *B. virgata*.

BOSWELLIA, *Rozburgh*. Dedicated to Dr. John Boswell, of Edinburgh. *Linn.* 10, Or. 1, Nat. Or. *Amyridaceæ*. Ornamental trees of easy culture, thriving best in loam and peat, and are propagated with facility from cuttings in sand, under a glass. The plants of this genus are called Olibanum trees. *B. serrata* furnishes a resin which is used as incense, and possesses stimulant, astringent, and diaphoretic qualities; *B. glabra* supplies a coarser kind, used for pitching the bottoms of ships. The resin of both species is used in India as a frankincense and as pitch.

BOUSSINGAULTIA, H. B. and Kunth named this genus in honour of J. B. Boussingault, a celebrated naturalist and traveller. *Linn.* 6, Or. 1, Nat. Or. *Basellaceæ*. This is a most desirable stove plant, of rapid growth, and bearing copious and graceful racemes of deliciously fragrant flowers. It grows in any common garden soil, and may be increased by seed. At Glasnevin, near Dublin, the plant has stood the winter in the open air, planted against a wall.

baselloides . White . . 7, F. Bl. P. 6 S. Amer. 1836

BOUTELDOA. See *Chondrosium*.

BOUVARDIA, *Salis*. In memory of Dr. Bouvard, superintendent of the royal Paris botanic garden. *Linn.* 4, Or. 1, Nat. Or. *Cinchonaceæ*. This is a beautiful genus, worthy of extensive cultivation. *B. triphylla* is a free flowerer, and thrives in a cool part of the greenhouse; *B. versicolor* is rather more tender, and thrives best in a warmer situation in summer, but requires to be cool in winter. They grow in a mixture of loam and peat, and young plants may be obtained from cuttings, which strike in the same kind of soil, in heat; they may also be propagated by pieces of the root, planted in good soil, in heat. *Synonyme*: 1, *B. Jacquini*, *Houstonia coccinea*.

Garden Hybrids: *Briaria*, *Hogarth*, *Laura*, *Rosalinda*.

BOVEY COAL is probably the bituminized remains of a tree which has been named by Witham *Pinites carbonæcus*.

BOVISTA, *Persoon*. Latinised from its German name *böfst*. *Linn.* 24, Or. 9, Nat. Or. *Lycoperdaceæ*. Striking productions. Bulliard mentions having seen many of them eighteen, twenty, and twenty-three inches in diameter; and on the authority of others, he affirms that they attain the enormous bulk of nearly nine feet in circumference. *B. gigantea* is the largest of the genus, measuring two feet in

- diameter. The flesh is at first white, afterwards of a greenish-yellow, lastly of a brown grey, the outer peridium cracks, and peels off in large flakes on being handled—*gigantea*, *nigræscens*, *plúmbea*.
- BOWENIA**. Named in honour of G. F. Bowen, the governor of Queensland. *Linn.* 22, Or. 12, Nat. Or. *Cycadaceæ*. Singular species lately discovered in Australia. For culture, see *Cycas* and *Zamia*.
- spectabile* . Apetalous 3, G. Ev. P. 3 Australia . 1860
- BOWIEA**, *Haworth*. In memory of J. Bowie, a collector of plants for the Kew gardens. *Linn.* 6, Or. 1, Nat. Or. *Liliaceæ*. Curious plants, succeeding in fibrous sandy peat, and multiplied by offsets or suckers.
- Africana* . Red gr. 10, G. Ev. S. 1½ C. G. H. . 1823
myricantha Red gr. 5, G. Ev. S. 1 C. G. H. . 1823
- BOWLESIA**, *Romer and Schultes*. Named in honour of Mr. Bowles, an Irish botanist. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. A minute curious plant, will grow in any common soil, and is increased by divisions.
- ténera* . Grn. yel. 7, F. Ev. Cr. ¼ M. Video . 1827
- BOWSTRING HEMP**. See *Sansevieria*.
- BOX-ELDER**. See *Negundo*.

BRÁSSICA, *Linn.* From *bresic*, the Celtic name of the cabbage. *Linn.* 15, Or. 2, Nat. Or. *Brassicaceæ*. In this genus we have the well-known cabbage, with its many varieties, and many other familiar potherbs and roots. It is wonderful to look upon the common cabbage (*B. oleracea*) with its varieties, and observe the exceeding great difference in appearance and qualities, particularly when we compare the original types as found on our shores, with wavy sea green leaves, tending to no head, and flowering like wild mustard or charlock, with the cauliflower and red cabbage, &c. As their culture is generally well known, we shall dwell upon it here as briefly as possible; the cabbage and its varieties require a very strong rich soil, or they will not come to a good size. The turnip also does well only in good rich soil, and indeed the whole tribe thrive best in open loamy soil, enriched with manure. They all produce an abundance of seeds, which must be sown at those periods which experience has shown to be the best, for bringing their produce to perfection at certain seasons. *Synonymes*: 1, *B. sempervirens*; 2, *Ráphanus cheiranthifolia*; 3, *Sisymbrium valentinum*—*balearica* 1, *canapéstris*, *c. Napo-brássica*, *c. comminis*, *c. rutabaga*, *c. oleifera*, *c. pabularia*, *cheiranthifolia* 2, *cheiranthos*, *chinensis*, *elongata*, *Erucastrum*, *fruticulosa*, *Gravina*, *Heleniána*, *humilis*, *incana*, *laevigata*, *monensis*, *montana*, *Nápus*, *N. esculentus*, *N. albus*, *N. flavus*, *N. nigricans*, *oleiferus* 2, *oleracea*, *o. asparagoides*, *o. cauliflora*, *o. comminis*, *o. cónica*, *o. costata*, *o. crispata*, *o. depressa*, *o. elliptica*, *o. gemmifera*, *o. major*, *o. obovata*, *o. oblonga*, *o. palmifolia*, *o. quercifolia*, *o. ramosa*, *o. rubra*, *o. sabélica*, *o. sphaerica*, *o. vulgaris*, *pinnatifida*, *polymorpha*, *præcox*, *Pseudo-erucastrum*, *Rápa*, *R. depressa*, *R. oblonga*, *R. oleifera*, *repanda*, *Richèrii*, *subularia*, *Tournefortii*, *valentina* 3, *violacea*. See also *Erucaria*, *Ergsimum*, *Erucaria*, *Moricandia*.

BRASSICACEÆ, a large order of plants usually known as Crucifers, including the cabbage, radish, and many other useful and showy plants.

BRAVÒA, *La Llave*. *Linn.* 6, Or. 1, Nat. Or. *Liliaceæ*. W. B. Booth, whom Dr. Lindley quotes in describing the plant, makes the following remarks with regard to it: "The plant

from which the above description was made, was cultivated in the stove, but I have since found that others grown in a warm greenhouse succeeded equally well, and had their flowers quite as high coloured. They seem to thrive in a light rich loam, and not too much water; I suspect it will ripen seeds, and by them be easily increased. It is a beautiful bulbous plant." *Synonyme*: 1, *Catocápnia geminiflora*.

geminiflora 1. Red . . . 7, G. Bl. P. 1 Mexico . 1841

BRÄYA, *Sternberg*. In memory of Count Bray, a German botanist. *Linn.* 15, Or. 2, Nat. Or. *Brassicaceæ*. Curious minute species, with purple flowers. They thrive best in loamy soil mixed with a little fibrous peat, and are multiplied by seeds.

Roxbúrgii 1. White . 7, S. Ev. Cl. 3 E. Ind. . 1826

BRÉXIA, *Noronha*. Named from *brexis*, rain; on account of the protection afforded against rain by some of the large leaves. *Linn.* 5, Or. 1, Nat. Or. *Brexiaceæ*. Excellent stove plants, with very beautiful foliage. They all grow freely and look well planted in large pots, in turfy loam and peat mixed. Cuttings take readily in any state, except that the leaves must not be moved, planted in sand, under a glass, in heat. A bud at the base of an entire leaf will strike, and make a young plant, if put in a little sand, under a glass, and put in the propagating house.

BROME-GRASS. See *Bromus*.

BROMELIA, *Linn.* So called after Olaus Bromel, a Swedish botanist. *Linn.* 6, Or. 1, Nat. Or. *Bromeliaceæ*. This is a genus of very handsome plants, among which the Pine Apple was lately included. They are of easy culture providing they have a sufficiency of heat, and are potted in good rich open loamy soil, they must be watered carefully, that is, giving a good supply when growing, but in the winter a very little is sufficient. The pots should be well drained, and as the plants are, like the Pine

Apple, subject to injurious attacks of the scale, &c., they should be carefully looked over and washed; indeed, these plants may be said to do best with the treatment successfully applied to the Pine Apple. Rope is manufactured from a species of the genus in Brazil, called *Gravarrtha*. See *Ananassa* and *Bilbergia*.

BROOK WEED. See *Sambolus*.

BROOM. See *Cytisus, Lygeum, Spartium*.

BROOM-CYPRESS. See *Kochia*.

BROOM-RAPE. See *Orobáncæ*.

BRÓSIMUM, *Suartz*. Named from *brosimos*, good to eat; in allusion to the eatable fruit. *Linn.* 23, Or. 2, Nat. Or. *Artocarpææ*. *Alicástrum* is common in the woods of Jamaica; the timber is not despicable, but the leaves and young branches are more useful, and a hearty fattening fodder for all sorts of cattle. The fruit, boiled with salt fish, pork, or beef, or pickle, has frequently been the support of the negroes and poorer sorts of white people in times of scarcity, and proved a wholesome and not unpleasant food; when roasted, it eats something like our common chestnut, and is called bread-nut. The leaves and young shoots are full of gum, which renders them disagreeable to most cattle at first; but they soon grow very fond of them. *B. spurtum* is also common in woods in the W. Indies; but its timber is of little value. In our stoves all the species thrive well in loamy soil, and old cuttings with their leaves on, root in sand, in moist heat.

BROUSSONËTIA, *Ventenat*. In compliment to P. N. V. Broussonet, a French naturalist and traveller. *Linn.* 22, Or. 4, Nat. Or. *Moræææ*. Ornamental and fast-growing fruit trees, with large, various-shaped leaves, which differ in the male and female plants, so much as not to be easily distinguished one from the other. The fruit is no larger than peas; and in China and Japan *B. papyrifera* is cultivated for the sake of its young shoots, which are used in the same manner as osiers here; the outer bark, when separated from the wood and inner bark,

will make tolerably good paper. The juice is also used in China as glue in gilding leather and paper. From the bark of this tree is made the finest and whitest cloth, worn by the highest ranks in Otaheite and the Sandwich Islands. The cloth of the bread-fruit tree is superior in whiteness and softness to it, consequently worn by the commoner people. They grow in any open soil, and increase readily by cuttings. *Synonymes*: 1, *Morus papyrifera*; 2, *B. spathulata*, *B. navicularis*. See *Mac-lura*.

BRUNIACEÆ, a small order of plants growing like heaths, principally natives of the Cape of Good Hope.

BRUNIA, *Linn.* In memory of Cornelius Brun, a traveller in the Levant and Russia. *Linn.* 5, Or. 1, Nat. Or. *Bruniaceæ*. This, observes Mr. Sweet, is a pretty Cape genus; its species are little bushy shrubs, with heath-like leaves, and are handsomest while young. The flowers are not so showy as in many other genera, but some of them are very elegant. A sandy peat soil suits them best, with a moderate supply of water; young cuttings, planted in sand under a bell-glass, strike root freely.—*Bot. Cult.* 153. See *Berardúa*, *Berzèlia*, *Raspàlia*, *Stadàvia*.

BRUNIADS. See *Bruniaceæ*.

BRUNNÍCHIA, *Banks.* Named in memory of one F. Brunnich, a Danish naturalist. *Linn.* 10, Or. 3, Nat. Or. *Polygonaceæ*. An evergreen climber, of some merit; it grows readily in a loamy soil, and roots freely from cuttings.

cirròsa Pink . 7, G. Ev. Cl. 6 Carolina . 1787

BRUNÓBIA, *Smith.* Named in compliment to Robert Brown, Esq., D.C.L., &c., &c. *Linn.* 5, Or. 1, Nat. Or. *Brunoniaceæ*. A most interesting fragrant perennial; for the growth

of which, a frame or cool greenhouse is recommended.

austrâlis . . . Blue . 5, H. Her. P. 1 N. Holl. 1834

BRUNONIACEÆ, a very small order, consisting of only one genus of small herbaceous plants.

BRUNONIADS. See *Brunoniaceæ*.

BRUNSFELSIA, *Linn.* In memory of Otho Brunfels, of Mentz, a carthusian monk and physician. *Linn.* 14, Or. 2, Nat. Or. *Scrophulariaceæ*. Handsome-growing, fine-flowering shrubs, with neat foliage, and showy white or purple flowers. They succeed well in a good rich soil; and cuttings root readily in sand or soil under a glass, in heat. See *Fransisceæ*.

BRUNSVIGIA, *Ker.* So called in honour of the family of Brunswick. *Linn.* 6, Or. 1, Nat. Or. *Amaryllidaceæ*. This is a beautiful genus of bulbous plants; "some of the bulbs grow to a great size, and require large pots to have them flower in perfection; or if planted out in the open borders in spring, there will be a better chance of their flowering; taking the bulbs up again in autumn, and keeping them through the winter; or the best way to succeed well with them is to have a pit built on purpose, so as to be occasionally covered with the lights to keep off too much wet, and to be covered close in severe weather, as they cannot bear the frost; the mould must be made for them of full one-third sand, more than one-third of turfy loam, and the rest peat; all well mixed together, but not chopped too small, as the roots run better through it for being rough and hollow; when in full growth and in flower they require a frequent supply of water, but none while dormant; all the greenhouse species of *Amaryllidaceæ* will succeed best in this way." *Bot. Cult.* 180. *Synonymes*: 1, *Hæmânthus ciliâris*; 2, *Ammôcharis corânica*; 3, *Amarÿllis corânica*, *pâllida*; 4, *disticha*, *Buphâne disticha*; 5, *Ammôcharis falcata*; 6, *Amarÿllis laticida*, *Nerine laticida*; 7, *Amarÿllis orientâlis*; 8, *Hæmânthus toxicârius*.

BRUSSELS SPROUTS. See *Brâssica oleracea*, v. *bullata*.

BRUTI. See *Mauritica vinfifera*.

BRYA, *Brown*. From the word *bryo*, to sprout; so named on account of the germination of the seed commencing while on the plant. *Linn.* 16, Or. 6, Nat. Or. *Fabaceæ*. Tallish evergreen ornamental shrubs, succeeding well in very rich soil, and increased readily by cuttings or seed in heat. *Synonymes*: 1, *Amerimnum Ebenus*, *B. arborâscens*.

Ebenus 1 . . Yel. grn. 7, S. Ev. S. 10 Jamaica. 1713
Leonensis . Yel. gr. 7, S. Ev. S. 10 S. Leupe. 1824

BRYACEÆ, a large order of flowerless plants known as *Urn Mosses*.

BRYANTHUS, *Don*. From *bryo*, to sprout, and *anthus*, a flower. *Linn.* 10, Or. 1, Nat. Or. *Ericaceæ*. Fine dwarf shrubs, growing best in situations where the sun never shines, although they will not grow under the drip of trees; in damp shady places, however, they thrive well in common soil, and are increased by cuttings.
erectus . . Red . . 4, H. Ev. S. 1 Hybrid .

BRYOBIUM, *Lindley*. Name not explained. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. A plant of no beauty, and very easy culture.
pubescens . Green . . 10, S. Epi. 2 E. Ind. . 1836

BRYONIA, *Linn.* Named in allusion to the quick growth of the stems, from *bryo*, to sprout. *Linn.* 21, Or. 10, Nat. Or. *Cucurbitaceæ*. Straggling plants of little interest, and easy culture. "The root of *Bryonia* is powerfully purgative, but if properly cooked, becomes wholesome; those of *B. rostrata* are used in India internally, in electuary, in cases of piles, it is also used in the form of powder as a demulcent; *B. cordifolia* is cooling, and useful in expectorants. The root of *B. epigæa* was once considered to be the esteemed Calomba Root, on account of its nearness in quality. The young shoots and leaves of *B. scabra*, after roasting, are aperient. — *africana*, *alba*, *cordata*, *crætica*, *divica*, *dissecta*, *divisa*, *epigæa*, *ficiifolia*, *filiformis*, *Gârcini*, *grândis*, *laciniâsa*, *latebrâsa*, *nitida*, *palmeta*, *pinnatifida*, *quingueloba*, *scabra*, *scabrèlla*, *tenèlla*, *trilobata*, *verrucosa*.

BRYONY. See *Bryonia*.

BRYOPHYLLUM, *Salisbury*. So named from *bryo*, to grow, and *phyllon*, a leaf; in reference to the circumstance of the leaf when laid upon damp earth emitting roots, whence arise young plants. *Linn.* 8, Or. 4, Nat. Or. *Crassulaceæ*. These curious plants require very little water, and the pots to be well drained; they flower best when plunged in a bottom heat; rich loamy soil suits them well. *Synonyme*: 1, *Cotyledon calycinum*.

calycinum 1. Grn. pur. 6, S. Ev. S. 2 E. Ind. . 1800
proliferum . Gr. red . 6, S. Ev. S. 2 Madagas. 1858

BRYOPSIS, *Agardh*. The little branches resemble moss; hence the name *bryon*, moss, and *opsis*, resemblance. *Linn.* 24, Or. 7, Nat. Or. *Fucaceæ*. Interesting marine productions, growing in fine feathery tufts—*compsita*, *plumosa*, *hypnoides*.

BRYUM, *Hedwig*. Named from *bryo*, to abound; abounding in great plenty. *Linn.* 24, Or. 5, Nat. Or. *Bryaceæ*. Dwarf species, generally

found growing in wet places. *B. triquetrum* has been only met with upon the border of some lakes in the north of Ireland. *Synonymes*: 1, *Mnium androgynum*; 2, *Brjium stellare*; 3, *compactum*; 4, *adureum*; 5, *nigricans*; 6, *linum*, *cubitale*—*affine*, *albicans*, *alpinum*, *androgynum* 1, *aquaticum*, *argenteum*, *caespitium*, *C. majus*, *C. minor*, *capillare* 2, *carneum*, *crudum*, *cuspidatum*, *dealbatum*, *demissum*, *elongatum*, *hornum*, *ulaceum*, *ligulatum*, *Ludwigii*, *marginatam*, *nitans* 3, *palustre*, *punctatum*, *pyriforme* 4, *roseum*, *rostratum*, *Tözeri*, *trichodes*, *triquetrum*, *turbidatum* 5, *ventricosum* 6, *Zierii*. See *Bartramia*, *Didymodon*, *Encalypta*, *Weissia*.

BUBON, *Linn.* Named from *boubon*, signifying the groin; in allusion to its medicinal qualities. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. Curious plants, of little beauty, and easy cultivation. *Synonymes*: 1, *Selinum galbanum*; 2, *Ferula lavigata*. See *Athamanta*, *Ferula*, and *Seseli*.

BUD, the flower, or leaves before expansion, are said to be in the bud.

BÜDDLEA, *Linn.* In memory of Adam Buddle, an English botanist. *Linn.* 4, Or. 1, Nat. Or. *Scrophulariaceæ*. A genus of very handsome shrubs, especially *B. globosa*, which flowers freely in the open air of Britain, providing it has a warm situation; one against a south wall is best. *B. Neemda* is one of the most beautiful plants of India, bearing a profusion of handsome white flowers. They delight in a loamy soil, mixed with a little peat, and young plants are obtained by layering the branches, or from cuttings, which root in sandy mould without difficulty.

BUMÁLDA, Thunberg. In memory of J. A. de Bumalda, a botanist of Bologna. *Linn.* 5, Or. 2, Nat. Or. *Staphyleaceæ*. A curious evergreen, with little to recommend it; any common soil suits it; seeds. *Synonyme*: 1, *Staphylea Bumalda*.

trifolia . . .	Green	8, G. Ev. S. 2	Japan . . 1812
----------------	-------	----------------	----------------

BUMÉLIA, Swartz. The Greeks gave this name to the common ash. *Linn.* 5, Or. 1, Nat. Or. *Sapotaceæ*. These are plants of grand foliage, but no great beauty of blossom. Some of the species are robust enough to bear our winters in the open air, but being rather tender, they require to be placed in a sheltered situation, or against a warm wall, and covered with mats during winter; cuttings root in sand, under a glass. The stove species are low W. Indian trees, and known there under the name of bully-tree. They thrive well in loamy soil, or loam and peat; and cuttings will root, but not freely, in sand under a hand-glass, being well ripened before they are taken off. *Synonymes*: 1, *Sideroxylon lycioides*; 2, *Chrysophyllum macrophyllum*; 3, *Achras salicifolia*; 4, *Sideroxylon strigosum*; 5, *S. tenax*.

BUNIAS, Linn. *Bunios*, a hill; alluding to the habitation. *Linn.* 15, Or. 1, Nat. Or. *Brassicaceæ*. Hardy annuals, of no interest—*aspera, Erucago, orientalis*. See *Euclidium, Muricaria, Oethodium*.

BUNIAM, Linn. Same as *Bunias*. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. Mere weeds of the simplest culture. *Synonymes*: 1, *Alexisum*;

2, *bulbocástanum*—*ammoides* 1, *bulbocástanum*, *fleudsum* 2, *pyrenæum*. See *Anni*, *Conopodium*, *Sium*, *Trachyspermum*, *Wallrothia*.

BUNAPARTEA. See *Littæa*.

BUPHANE, *Her.* *Linn.* 6, Or. 1, Nat. Or. *Amaryllidaceæ*. See *Brunsvigia*.

BUPLEURUM, *Linn.* Not satisfactorily explained. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. A very natural and remarkable genus, on account of the leaves being for the most part quite entire. They succeed in any common soil. The annual species merely require sowing in the open border early in spring; the perennial kinds may be increased by offsets, or seeds. *Synonymes*: 1, *Tendria canescens*; 2, *T. difforme*; 3, *T. frutescens*; 4, *T. fruticosum*; 5, *T. coriaceum*; 6, *T. plantagineum*; 7, *B. janceum*; 8, *T. spinosum*. See *Tendria*.

BURDEE. See *Papyrus antiquorum*.

BURDOCK. See *Arcium* and *Centotheca*.

BURG-I-TIBBUT. See *Rhododendron campanulatum*.

BURILL. See *Mauritia vinifera*.

BURLINGTONIA. *Lindley* dedicated this lovely genus to the amiable and accomplished Countess of Burlington. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. The species belonging to this genus are of great beauty, each of which rivals the other in loveliness of colour and delightful fragrance of their flowers. The species belonging to this and some other genera grow best upon wood with a little moss on their roots, and fastened to the wood with tempered copper or metallic wire. Oak branches with several arms or forks protruding in different directions are the most suitable wood for them. *B. rigida* is a very curious-growing species, producing the small pseudo-bulbs at the end of the wiry-like rhizoma. When the plants make their growth a little moss should be fastened to the oak branch for the young shoots to root and fasten themselves to. Copious watering overhead and likewise a strong heat are necessary when the plants are growing, but when they are torpid they should be kept cool and dry. They are increased by dividing the bulbs.

Synonyme: 1, *B. decora*.

- BURNING-BUSH.** See *Eubonymus americanus*.
- BURRIELIA, De Candolle.** So named by him in honour of John Mark Burriel, who published, in 1758, the Journey of Venegas into California. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. "It is a hardy annual, flowering in the summer months, and recommending itself by its copious yellow blossoms."
gracilis . . Yellow 7, H. A. $\frac{1}{2}$ California 1834
- BURRY**, covered with hooked stiff hairs, like the heads of bur or burdock.
- BURSA-PASTORALIS.** See *Capitella*.
- BURSARIA, Cavanilles.** Named from *bursa*, signifying a pouch. *Linn.* 5, Or. 1, Nat. Or. *Pitiosporaceæ*. A pretty species desirable for a greenhouse or conservatory, being an abundant flowerer, and very showy when covered with its elegant little white blossoms. An equal mixture of sandy loam and peat is the best soil for it; and young cuttings are not difficult to root in sand under a glass.
spindosa . . White 10, G. Ev. S. 10 N. S. W. . 1793
- BURSERA, Jacquin.** In memory of Joachim Burser, a botanist in Naples. *Linn.* 23, Or. 2, Nat. Or. *Amyridaceæ*. Large trees of considerable value: they grow in loam and peat; and increase by cuttings or seeds. *B. gummifera* abounds in a watery balsamic fluid, which however soon becomes inspissated by exposure to the air. Hedges are made of it by the Spanish residents in S. America, who call it *Almacigo*. It is also said to possess identical properties with *Quassia*.
gummifera . . Wh. gr. 5, S. Ev. T. 20 W. Ind. . 1690
serrata . . Wh. gr. 5, S. Ev. T. 25 E. Ind. . 1818
- BURSERIACEÆ.** See *Amyridaceæ*.
- BURTONIA, R. Brown.** Named in honour of D. Burton, who collected for the Kew Garden. *Linn.* 10, Or. 1, Nat. Or. *Fabaceæ*. This pretty New Holland genus requires more than ordinary care in its treatment to keep the plants in good health; an equal mixture of very sandy loam and peat is the best soil for it, and the pots to be well drained, with small pots, that the water may pass off freely, as nothing is more injurious to it than too much water. Cuttings of the young wood are not difficult to root, if planted in sand under a bell-glass; it may also be raised from seeds, which are sometimes produced.—*Bot. Cul.* 181. *Synonymes*: 1, *Gompholobium minus*.

- BUXBAUMIA, Linn.** In memory of J. C. Buxbaum, a German botanist. *Linn.* 24, Or. 5, Nat. Or. *Bryaceæ*. A most singular minute plant, without apparent leaves, more like a species of fungus than a moss, found generally in summer in fir-woods, &c.—*aphylla*. See *Diphyscium*.

BÓXUS, *Linn.* Supposed to have been taken from *pylmos*, dense ; in reference to the wood. *Linn.* 21, Or. 4, Nat. Or. *Euphorbiaceæ*. This is an excellent genus of hardy evergreen shrubs ; *B. baleàricus* does much better however when it is slightly protected in severe weather. They thrive in most situations ; and are propagated by suckers, or layers, without difficulty. The timber is very hard and smooth, and not apt to warp ; it is used by the turner, engraver, mathematical instrument maker, comb, pipe, and flute maker, and the roots by the inlayer and cabinet-maker. Wheels, skewers, pins, pegs for musical instruments, nut-crackers, button-moulds, weavers' shuttles, holler-sticks, bump-sticks, rollers, rolling-pins, tops, screws, spoons, knife-handles, combs, &c., are all made of it, as well as many other useful articles.

CABOMBACEÆ, a small order of aquatics nearly related to *Nymphæaceæ*. Found wild in America.

CABOTZ. See *Brayèra anthelmintica*.

CABRERA, so named after an obscure Spanish botanist. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. A tropical grass, growing in common soil.

chrysolepharis . Green 6, S. Grass 1½ S. Amer. . 1822

CACALÀCO. See *Cesalpinia cacalaco*.

CACALIA, *Linn.* Named from *kakos*, pernicious, and *lian*, exceedingly. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. A genus remarkable for the fleshy awkward-looking stems, and discoloured leaves of many of the species. They grow in a mixture of sandy loam, brick rubbish, and decomposed dung well reduced; they require very little water, even when growing, and the pots must be well drained. Cuttings taken off, and dried for a few days to heal the wound, strike readily; when sufficiently struck, they should be potted off, using the same kind of soil recommended for old plants, and carefully watered. *Synonymes*: 1, *Kleinia tomentosa*; 2, *C. tomentosa*; 3, *C. pugioniformis*; 4, *C. macrophyllum*. See *Culcitium*, *Senecio*.

CACAO. See *Theobroma cacao*.

CACHANLAHUAN. See *Erythraea cachanlahuan*.

CACHIBOU RESIN. See *Bursera gummiifera*.

CACHOU. See *Acacia catechu*.

CACHRYS, *Linn.* Not satisfactorily explained. *Linn.* 5, Or. 5, Nat. Or. *Apiaceæ*. The species are uninteresting, and the culture of them is easy. *Synonyme*: 1, *Laserpitium ferulaceum*—*alata* 1, *alpina*, *athamantoides*, *cretica*, *Libanotis*, *microcarpa*, *Morisani*, *odontalgica*, *seseoides*, *taurica*. See *Agastis*, *Athamanta*, *Caucalis* and *Laserpitium*.

CACOVICIA, *De Candolle*. A vernacular name.

CACUBA, *Or.* 1, Nat. Or. *Combrétacææ*. For culture and propagation refer to *Combrétum*. *Synonyme*: *Schousbæa cocinea*.
cocinea . . . Scarlet . 5, S. Ev. Cl. 4 Guiana.

CACTACEÆ, an order of succulent shrubs, natives of Tropical America, and of easy cultivation.

CACTALES. See *Cactaceæ*.

CACTUS, *Linn.* A name used by Theophrastus to describe a spiny plant. *Linn.* 12, Or. 1, Nat. Or. *Cactaceæ*. This genus is commonly

called the melon thistle. The species are very interesting in appearance, and variable in structure. They succeed best in sandy loam, mixed with brick and lime rubbish, and a little peat, or rotten dung, at all times carefully watered. Cuttings root readily if a little dried before planting. *Synonyme*: 1, *C. nobiles*. See *Cereus*, *Echinocactus*, *Epiphyllum*, *Mammillaria*, *Melo-cactus*, *Opuntia*, *Pereskia*, *Rhipsalis*, *Phyllocactus*.

CAJAN. See *Cajanus*.

CAJANUS, *Dec.* From *cajjang*, its name in Malabar. *Linn.* 17, Or. 1, Nat. Or. *Leguminosæ*. The species are highly useful for food in some places. They grow well in sandy loam; and increase from seed. The seed of *C. flavus* is much eaten by poor people, and negroes, and is esteemed a wholesome pulse. The plant is cultivated in Jamaica for feeding pigeons, whence its name; and in the island of Martinico, even the better sort of people hold it in estimation. *Synonymes*: 1, *Cytisus Pseudocajan*; 2, *C. Cajan*.

bicolor 1 . Yellow . 7, S. Ev. S. 4 E. Indies . 1800

CALADIUM, *Ventenat*. Meaning not explained.

Linn. 21, Or. 9, Nat. Or. *Aracææ*. The species of this genus are interesting on account of having singularly spotted stems, and pretty neat, often green foliage. Several grow best in water, and the whole grow well if planted in rich soil, and may be propagated from tubers. *C. seguinum* is a native of the W. Indies and S. America, where it grows five or six feet high, and is called the dumb-cane, because it has the power, when chewed, of swelling the tongue, and destroying the power of speech. Dr. Hooker gives an account of a gardener who incautiously bit a piece of the dumb-cane, when his tongue swelled to such a degree that he could not move it, he became utterly incapable of speaking, and was confined to the house for several days; he also adds, that it is said to impart an indelible stain to linen.—*Ex. Bot.* P. Brown states, that its stalk is employed to bring sugar to a good grain when it is too viscid, and cannot be made to granulate properly by the application of lime alone. *Synonymes*: 1, *Arum cucullatum*; 2, *A. grandifolium*; 3, *C. seginum maculatum*; 4, *C. grandifolium*; 5, *Arum virgincum*; 6, *A. xanthorizum*; 7, *Acotias sagittifolium*. See *Acotias*, *Aglionema*, *Amorphophallus*, *Culcasia*, *Dieffenbachia*, *Goniatanthus*, *Peltandra*, *Philodendron*, *Pythonium*, *Remusatia*, *Syngonium*, *Xanthosoma*.

CALÁMPELIS, D. Don. Compounded from *kalos*, pretty, and *ampelis*, a vine, its habit of growth being to ramble like that plant. *Linn.* 14, Or. 2, Nat. Or. *Bignoniææ*. This is a species of great merit, capable of enduring the open air; when in full flower it has an elegant appearance; the situation for it is against a south wall, trained up a pillar, over a vase, &c. Any light loamy soil suits it; and young plants from cuttings are readily obtained. *Synonymes*: 1, *Eccremocarpus scaber*.
scabra 1 . Orange . 7, F. Ev. Cl. 10 Chile . . 1824

CALAMUS, Linn. Taken from *kalam*, signifying a reed, in Arabic. *Linn.* 6, Or. 1, Nat. Or. *Palmææ*. This is a fine genus, holding a middle station between the grasses and palms, with the habit of the former and inflorescence of the latter. They succeed best in a moist atmosphere in rich sandy loam, and are increased by seed. The resin called dragon's blood is obtained by wounding *C. Draco*. *C. zaiacca* is cultivated for its fruit, which is about the size of a walnut, and covered with scales like those of a lizard; within these scales are two or three sweet yellow kernels.

CALANTHE, R. Brown. From *kalos*, beautiful, and *anthos*, a flower; literally a "pretty blossom." *Linn.* 20, Or. 1, Nat. Or. *Orchidaceae*. This is a genus of very pretty plants when in flower. They require a light airy part of the house, otherwise the flowers will not open freely, neither will their colours be so good. The plants must never be saturated with water; in every other respect they require the same treatment as is recommended for *Bletia*. *Synonymes*: 1, *Amyglottis bicolor*; 2, *A. veratrifolia*, *Bletia Masica*; 3, *Amyglottis vestita*, *Alismorchis vestita*, *Centrosia vestita*; 4, *C. australis*. See *Ania*.

CALATHEA, Meyer. The name applies to the form of the stigma, and is derived from *kalathos*, a basket or cup. *Linn.* 1, Or. 1, Nat. Or. *Marantaceae*. The plants of this genus are interesting and ornamental. *C. zebрина* is much admired on account of the stripes on the leaves, which resemble the marks on a zebra's back; whence the specific name. They grow well in the stove, in sandy peat; and are increased by divisions. *Synonyme*: 1, *Maranta zebрина*.

CALATHIAN VIOLET. See *Gentiana pneumonanthe*.

CALBÒA, Car. Named in honour of Don L. Calbo, a Spanish botanist. *Linn.* 5, Or. 1, Nat. Or. *Convolvulaceae*. A genus of plants of easy culture, growing in common soil, and increased by cuttings.

globosa	. Red	. 6, G. De. Cl.	6	Mexico	. 1843
---------	-------	-----------------	---	--------	--------

CALCARATE, spurred, having a spur.

CALCAREOUS, chalky.

CALCEIFORM, like a little shoe.

CALCEOLARIA, Linn. Named from *calceolus*, alluding to the form of the corolla. *Linn.* 2, Or. 1, Nat. Or. *Scrophulariaceae*. This is a favourite genus, and contains some very showy species, from which an almost countless number of handsome hybrids have been raised and are raising. The herbaceous and shrubby kinds are chiefly cultivated. They thrive in a turfy loam, peat, and sand mixed, or any kind of rich, open, sandy garden mould seems to suit them. The place most favourable to their successful growth is a pit or frame, where they must be potted and watered with judgment. Some cultivators turn them out in the flower-garden, where they make a brilliant display; others flower them in pots, with perfect success, in the greenhouse; the latter way is generally preferred for the rare and superior kinds. Young cuttings planted in soil, under a glass, root freely; they are also increased from seed, which it is recommended to sow as soon as ripe. The annual species require to be sown in heat, and when up, potted off, and afterwards brought on for flowering in the greenhouse. *Synonymes*: 1, *tinctoria*; 2, *diffusa*; 3, *floribunda*; 4, *Anemala pendula*; 5, *C. viscostissima, rugosa macrophylla, rugosa latifolia*; 6, *Bca violacea, Jovellana violacea*; 7, *Bca punctata, Jovellana punctata*.

Garden varieties.—These are too numerous too allow of even a select list; many however are very beautiful.

CALCEBOLUS. See *Cypripedium Calcebolus*.

CALCOTRAPA. See *Centauræa Calcotrapa*.

CALDASIA, *Wild.* In memory of J. Caldas, a Bogotan naturalist. *Linn.* 5, Or. 1, Nat. Or. *Apiæea*. This very handsome species thrives well in sandy peat, mixed with a little loam; seeds. *Synonyme*: 1, *Bonplandia geminiflora*.

heterophylla . Blue . 7, S. A. 1½ N. Spain . 1813

CALDCLUVIA, *G. Don.* Named after Alexander Caldeclough, F.R.S., &c., who collected and sent home many dried plants from Chile. *Linn.* 3, Or. 8, Nat. Or. *Cunoniæea*. For culture, see *Weinmannia*. *Synonyme*: *Weinmannia paniculata*.

paniculata . White . 6, G. Ev. S. 4 Australia . 1831

CALÇA, *R. Brown.* Derived from *kalos*, beautiful; in allusion to the showy flowers. *Linn.* 19, Or. 4, Nat. Or. *Asteræea*. The species are very showy, and easily cultivated; a loamy soil mixed with peat is best; cuttings root without difficulty in soil or sand. See *Bácharis*, *Melananthæra*.

cordifolia . Purple . 6, S. Ev. S. 1½ Jamaica . 1822

jamaicensis . Purple . 6, S. Ev. S. 3 W. Indies 1739

solidaginea . Purple . 6, S. Ev. S. 3 Caracas 1817

leptophylla . White . 6, F. Ev. S. 2 N. Zealand 1824

CALEACTE, *R. Brown.* From *kalos*, beauty, and *akte*, sea-shore; the species being ornamental there. *Linn.* 19, Or. 1, Nat. Or. *Asteræea*. A showy species, of easy culture and propagation. *Synonyme*: 1, *Solidago urticæefolia*.

pinnaatifida . Yellow . 6, S. Ev. S. 2 Brazil . . 1816

urticæefolia 1. Yellow . 7, S. Ev. S. 2 Vera Cruz 1740

CALÆANA, *R. Brown.* In honour of George

Caley, sometime superintendent of the Botanic Garden, St. Vincent. *Linn.* 20, Or. 1, Nat. Or. *Orchidæea*. A genus of pretty plants, requiring the same treatment as *Caladenia*.

májor . . . Gr. brn. 6, G. Ter. 1 N. S. Wales . 1810

minor . . . Gr. brn. 6, G. Ter. 2 N. Holland . 1822

nígrita . . . Dark . 6, G. Ter. 1 Swan River . 1810

CALECTÁSIA, *Brown.* *Linn.* 6, Or. 1, Nat. Or. *Juncæea*. Discovered by Mr. Brown, in South-Western Australia. This elegant flowering rush is easy of cultivation, as a greenhouse plant; it requires to be potted in sandy loam, and to stand in a shady situation. *Synonyme*: 1, *Hättia elegans*.

cyænea . . . Blue . 6, G. Her. P. 1 Australia . 1840

CALÉNDULA, *Linn.* Named from *calendæ*, the first day of the month; there being flowers almost any month in the year. *Linn.* 19, Or. 4, Nat. Or. *Asteræea*. A genus of showy plants, among which is the old and well-known *C. officinális*, or common marigold. This species was formerly used in soups and broths, but is now little regarded. The greenhouse species thrive well in loam and peat mixed; and cuttings root freely in sand, under a glass. The half-hardy annuals it is recommended to sow in a gentle heating hotbed, from whence they must be transplanted into the open ground; the hardy kinds merely require to be sown in the open borders. *Synonyme*: 1, *C. ægyptiaca*.

arborésens . Yellow 12, G. Ev. S. 3 C. G. H. . 1774

arvensis . . . Yellow 6, H. A. 2 Europe . 1697

dentata . . . Yellow 5, G. Ev. S. 1½ C. G. H. . 1790

denticulata . Yellow 12, G. Ev. S. 2 Barbary . 1821

fruticosa . . . Yellow 6, G. Ev. S. 2 C. G. H. . 1752

graminifolia . Yellow 5, G. Her. P. 1 C. G. H. . 1731

hybrida . . . White . 6, H. A. 1 C. G. H. . 1752

incana . . . Yellow 7, H. A. 1½ Barbary . 1796

mexicana . . . Yellow 8, H. A. 1½ Mexico . 1829

auriçoa . . . Yellow 12, G. Ev. S. 2 C. G. H. . 1781

nudicaulis . . W. pur. 7, H. A. 1 C. G. H. . 1781

officinális . . Orange 6, H. A. 3 S. Eur. . 1573

plena . . . Orange 6, H. A. 3 Gardens .

oppositifolia . Yellow 8, G. Ev. S. 2 C. G. H. . 1774

pluvialis . . . White . 6, H. A. 1 C. G. H. . 1699

sâncta . . . Yellow 6, H. A. 2 Levant . 1731

sicula 1 . . . Yellow 6, H. A. 1 Sicily . 1816

stellata . . . Yellow 7, H. A. 2 Barbary . 1795

suffruticosa . Yellow 12, G. Ev. S. 1 C. G. H. . 1823

Tragus . . . W. pur. 5, G. Ev. S. 2 C. G. H. . 1774

flaccida . . . Orange 5, G. Ev. S. 2 C. G. H. . 1774

viscosa . . . Orange 8, G. Ev. S. 2 C. G. H. . 1790

CALEPINA, *Adanson.* Not explained. *Linn.* 15, Or. 1, Nat. Or. *Brassicæea*. A curious annual, of easy culture. *Synonyme*: 1, *Myagrwm iberioides*.

Corvini . . . White . 5, H. A. 1½ S. Europe . 1816

CALËYA. See *Calæana*.

CALÍCIUM, *Acharius.* The name is expressive of the organs of reproduction; and derived from *kalypion*, a little cup. *Linn.* 24, Or. 8, Nat. Or. *Graphidæea*. Curious white or grey productions appearing in patches on wood or boards exposed to the air—*aciculare*, *æruginosum*, *cantharëllum*, *capitellatum*, *cærulescens*, *chrysocephalum*, *claviculare*, *crustatum*, *cærtum*, *debile*, *ferrugineum*, *hyperëllum*, *in-*

quinans, marginatum, microcephalum, rostdum, sphaerocephalum, stigonellum, terebinellum, tigillare.

CALICO BUSH. See *Kalmia latifolia*.

CALÍMERIS, De Candolle. From *kalos*, pretty, and *meros*, a part. *Linn.* 19, Or. 2, Nat. Or. *Asteraceae*. *Synonyme: Aster cassiurábicus.* See *Aster*.

cassifrabica. Purple. 9, H. Her. P. Russia. 1834

CALÍNEA. See *Dolichoarpus Calinea*.

CALIPHÛRIA, Herbert. Derivation unknown. *Linn.* 6, Or. 1, Nat. Or. *Amaryllidaceae*. These plants "are evidently akin to *Eurycles* of Amboyna and Australia, forming a link between *Eurycles* and *Griffinia*." For culture, &c., refer to *Amaryllis*.

Hartwegiana Yellow. 5, S. Bl. P. 1 N. Grenada 1843

Herbertiana. Yellow. 5, S. Bl. P. 1

CÁLLA, Linn. From *kalos*, beauty. *Linn.* 7, Or. 1, Nat. Or. *Araceae*. These species are showy and worth cultivation, they grow freely in any rich soil; and increase by seeds, or divisions. *Synonyme: 1, Dracontium pertusum.* See *Richardia, Homalomena, Monstera, and Pellandria*.

aromatica. White. 7, G. Her. P. 2 China. . . 1813

oculta. . . White. 5, G. Her. P. 2 China. . . 1817

palustris. White. 7, G. Aq. P. 1 N. America. 1768

perthusa 1. White. 5, G. Ev. Cr. 6 W. Indies. 1752

CALLÍNDRA, Bentham. From *kalos*, beautiful, and *aner andros*, stamen, in allusion to the length and beautiful colour of the stamens. *Linn.* 16, Or. 3, Nat. Or. *Fabaceae*. Elegant shrubs, related to *Mimosa*, easily cultivated in light rich soil, and propagated by cuttings, planted in sand and plunged in a gentle heat. *Synonyme: 1, Inga Harrissii*.

brévipes. . . Crimson 3, S. Ev. S. 6 Brazil. . . 1849

Harrissii 1. . . Rose. 2, S. Ev. S. 10 Brazil. . . 1845

Tweedii. . . Scar. cri. 3, S. Ev. S. 6 Mexico. . . 1845

CALLICÁRPA, Linn. Named in reference to the pretty berries; from *kalos*, beautiful, and *karpos*, fruit. *Linn.* 4, Or. 1, Nat. Or. *Verbenaceae*. The species of this genus are handsome, and succeed well in loam and peat mixed. Cuttings strike without difficulty in sand or soil. The bark of *C. Lantana* has a peculiar subaromatic and slightly bitter taste, and is chewed by the Cingalese, when they cannot obtain *betel* leaves; the Malays reckon the plant diuretic. *Synonymes: 1, C. tomentosa; 2, C. japonica*.

americana. . . Red. 6, G. De. S. 4 N. Amer. 1724

arborea. . . Purple 3, S. Ev. T. 10 E. Indies. 1820

cana 1. . . Purple 6, S. Ev. S. 8 E. Indies. 1799

ferruginea. . . Blue. 6, S. Ev. S. 2 Jamaica. 1794

incana. . . Red. 7, S. Ev. S. 4 E. Indies. 1800

japonica. . . Pa. pk. 9, F. Dec. S. 4 Japan. . . 1850

macrophylla. . . Pink. 6, S. Ev. S. 5 India. . . 1808

purpurea. . . Purple 7, S. Ev. S. 8 E. Indies. 1822

reticulata. . . Red. 7, S. Ev. S. 4 Jamaica. 1820

rubra. . . Red. 5, S. Ev. S. 2 China. . . 1822

CALLICÉPHALUS. See *Centaurea nitens*.

CALLICHRŌA, Fischer and Meyer. From *kalos*, beautiful, and *chroa*, colour; in reference to the colour of its flowers. *Linn.* 19, Or. 2, Nat. Or. *Asteraceae*. This little plant is well

entitled to a place in every flower-border, as well on account of its dwarf and slender habit as of its rich golden-coloured flowers. It grows well in common garden soil, and is increased from seed, which should be reared on a hotbed.

platyglōssa. Yellow. 10, H. A. 1 California 1835

CALLICŌCCA. See *Cephaelis*.

CALLICŌMA, Bot. Rep. The name is expressive of the pretty bunches of yellow flowers; and is derived from *kalos*, beautiful, and *come*, hair. *Linn.* 11, Or. 2, Nat. Or. *Cunoniaceae*. A very showy plant, cultivated with ease in fibrous peat and sand; and cuttings root readily in sand, under a glass.

serratifolia. Yellow 6, G. Ev. S. 3 N. S. W. . 1793

CALLIGŌNUM, Linn. Derived from *kalos*, beautiful, and *gonum*, a joint; there being joints instead of leaves. *Linn.* 11, Or. 4, Nat. Or. *Polygonaceae*. This species is showy, and requires sandy open loam to grow it well; increase is by cuttings. See *Atriplex*.

Pallasia. . . Grn. wht. 8, H. Ev. S. 4 Casp. Sea 1780

CALLIŌPEA, D. Don. So called from *Calliope*, one of the Muses. *Linn.* 19, Or. 1, Nat. Or. *Asteraceae*. This is a pretty dwarf genus, succeeding in any loamy soil, and increased by divisions. *Synonymes: 1, Leontodon aureum, Hieracium aureum*.

aurea. . . Yellow. 6, H. Her. P. 1 Italy. . . 1739

CALLIŌPSIS, Reich. Derived from *kallistos*, beautiful, and *opsis*, the eye; in allusion to the beautiful bright eye of the flower. *Linn.* 19, Or. 3, Nat. Or. *Asteraceae*. The flowers of these plants are extremely pretty, and well suited for the flower-garden. The perennial kinds grow in any loamy soil, and the annuals merely require sowing; the tender species should be sown in a slight hotbed, and afterwards transplanted. *Synonymes: 1, Coreopsis tinctoria; 2, C. palmata; 3, C. rosea; 4, Diplosastera tinctoria; 5, Coreopsis diversifolia*.

CALLIPÉLTIS, De Candolle. From *kalos*, beautiful, and *pelle*, a buckler. *Linn.* 4, Or. 1, Nat. Or. *Galiaceae*. A hardy annual, of no beauty, growing in any common soil—*acullaria*.

CALLIPRŌRA, Lindley. Derived from *kalos*, pretty, and *prora*, a front; in allusion to its pretty appearance. *Linn.* 6, Or. 1, Nat. Or. *Liliaceae*. This is a very handsome hardy bulbous species, succeeding well in a shaded peat border, and increased freely from offsets.

lutea. . . Yellow. 8, H. B. P. 1 California. 1831

CALLIPSYCHE, Herbert. From *kalos*, beautiful, and *psyche*, a butterfly—beauty of flowers. *Linn.* 6, Or. 1, Nat. Or. *Amaryllidaceae*. A

new genus of bulbous plants, requiring the same treatment as *Pancrätium*.

eucrosioides . Scar. gr. 3, S. Bl. P. 2 Mexico . . 1842

CALLIPTERIS, Bory. From *kalos*, beautiful, and *pterus*, a fern—beauty of fronds. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceæ*. Stove ferns, requiring similar treatment to *Polypodium*. *Synonymes*: 1, *Anisogonium seramporense*; 2, *Diplazium malabâricum*; 3, *Asplenium ambiguum*, *Digrammâria ambigua*, *Diplazium pubescens*; 4, *D. ovatum*.

CALLIPHŒREA, Herb. Derivation not known. *Linn.* 6, Or. 1, Nat. Or. *Amaryllidaceæ*. Bulbous perennials requiring the same treatment as stove Amaryllids, and are increased by offsets.

Hartwegiana . Gr. wh. 5, S. Bl. P. 1. N. Grenada 1843

CALLIRHŒE. See *Mâlva*.

CALLISACÉ, Fischer. The name alludes to the seeds; and is taken from *kalos*, beautiful, and *sakos*, a buckler. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. A species of little beauty, and easily cultivated—*dahurica*.

CALLISIA, Linn. This is a pretty species, hence the propriety of the name from *kalos*, pretty. *Linn.* 3, Or. 1, Nat. Or. *Liliaceæ*. This plant succeeds in sandy fibrous peat, and is increased by division.

repens . . . Blue . 6, S. Tu. P. ½ W. Indies . 1776

CALLISTA. See *Erica*.

CALLISTACHYS, Ventenat. The name is expressive of the fine spikes of flowers; and is derived from *kalos*, beautiful, and *stachys*, a spike. *Linn.* 10, Or. 1, Nat. Or. *Fabaceæ*. Beautiful shrubs of easy and free growth; sandy peat and loam is the best soil for them; and young plants are readily obtained from cuttings, in sand. *Synonyme*: 1, *C. sordida*.

CALLISTEMMA, R. Brown. The name refers to the beautiful flowers; and is derived from *kalistos*, prettiest, and *stemma*, a crown. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. The species of this genus are well known in the garden for the beauty of their flowers, and the little trouble required to bring them to perfection. The seeds should be sown in a gentle hotbed in spring, and the plants removed to the flower borders, or they may be sown as soon as the weather permits in the open air, where they are wished to flower. *Synonymes*: 1, *Aster chinensis*; 2, *A. indicus*.

CALLISTEMON, R. Brown. The name refers to the beautiful scarlet colour of the stamens of some species; and is derived from *kalistos*, beautiful, and *stemon*, a stamen. *Linn.* 12, Or. 1, Nat. Or. *Fabaceæ*. These are species of great beauty, and should be cultivated in all conservatory or greenhouse collections; particularly those with scarlet or crimson flowers. Loam, peat, and sand, is the best soil for them; and ripened cuttings strike readily in sand, or sandy loam, under a glass: they are also sometimes increased from seeds. *Synonymes*: 1, *Metrosideros citrinus*; 2, *M. lophanthus*; 3, *M. regulosus*; 4, *M. salignus*; 5, *M. speciosus*; 6, *M. viminâlis*; 7, *M. viridiflorus*.

CALLIXENE, *Comm.* From *kalos*, pretty, and *xenos*, a stranger—beauty of plants. *Linn.* 6, Or. 1, Nat. Or. *Smilacææ*. Plants requiring shelter in a frame or greenhouse, to be grown in sandy loam and peat, and increased by underground runners. *Synonyme*: 1, *Luzuriaga erecta*.

polyphylla 1 Wh. rd. 4, G. Her. Cl. 10 Chili . 1847

CALLOSE, callous, hardened.

CALLOUSLY - GLANDULAR, having hardened glands.

CALLOUSLY SERRATED, having hardened serratures.

CALLUNA. See *Erica*.

CALOBOTRYA. See *Ribes sanguineum*.

CALÓCERA, *Fries*. *Kalos*, beautiful, and *keras*, a horn; in allusion to the divisions of the plants. *Linn.* 24, Or. 9, Nat. Or. *Agaricææ*. These are remarkable productions found under the bark of various trees—*cornea*, *tuberosa*.

CALOCHEILUS, *Brown*. From *kalos*, beautiful, and *cheilos*, a lip. *Linn.* 20, Or. 1, Nat. Or. *Orchidææ*. A genus of bulbous-rooted plants, very showy when in flower. The sepals are yellowish green, and the lip purple, covered with rich brown hairs. They will grow in the greenhouse; but they do best in the stove, treated as the *Blétias*.

campéstris . Gr. brn. . G. Ter. $\frac{3}{4}$ N. Holland . 1824

paludosus . Brown . G. Ter. $\frac{3}{4}$ N. Holland . 1823

CALODÉRTUS, *Pursh*. From *kalos*, handsome, and *chortus*, grass. *Linn.* 6, Or. 3, Nat. Or. *Liliææ*. This is a splendid genus of plants. The soil most suitable for them is sandy peat, and a little loam; if the plants are grown in pots, they must be carefully drained, and the soil only watered as the growth happens to require it. In the winter they must be treated like other frame bulbs. When the roots recommence growing, shift them into new soil. They increase from offsets. *Synonyme*: 1, *Cyclobóthra elegans*.

CALODRÁCON. See *Dracæna*.

CALODÉNDRON, *Thunberg*. Derived from *kalos*, beautiful, and *dendron*, a tree; in reference to the beauty of the plant. *Linn.* 5, Or. 1, Nat. Or. *Rutacææ*. A tall-growing ornamental tree, succeeding in loamy soil; and increases from cuttings.

capense . . . Pink . 5, G. Ev. T. 50 C. G. H. . . 1789

CALONYCTION, *Choisy*. The circumstance of the flowers opening at night has suggested the derivation of the generic name, from *kalos*, beautiful, and *nyx*, night. *Linn.* 5, Or. 1, Nat. Or. *Convolvulææ*. Plants once regarded as species of *Ipomœa* and *Convolvulus*, constitute this genus.

pseudomuricatum . Purple 7, S. Ev. Cl. 6 E. Ind. 1827

CALOÏSE. See *Urtica tenacissima*.

CALOPÉTALON. From *kalos*, beautiful, and *pe-*

talon, a petal—beauty of flowers. *Linn.* 17, Or. 4, Nat. Or. *Fabacææ*. Australian plants, of easy culture in a mixture of light sandy loam and peat, and propagated by cuttings.

rifgens . . . Scar. yel. 5, G. Ev. Cl. 4 Australia . 1859

CALÓPHACA, *Fischer*. Taken from *kalos*, beautiful, and *phake*, lentil. *Linn.* 17, Or. 4, Nat. Or. *Fabacææ*. An ornamental species; it grows best in sandy loam; and is multiplied by seeds. *Synonymes*: 1, *Cytisus niger*, *pin-natus*, *Wolgáricus*.

Wolgárica 1 . Yellow . 5, H. De. S. 2 Siberia . 1786

CALÓPHANES, *D. Don*. Taken from *kalos*, beautiful, and *phaino*, to appear; alluding to the flowers. *Linn.* 14, Or. 2, Nat. Or. *Acanthacææ*. This is an interesting addition to our hardy border flowers; it succeeds best in loam and peat; and is readily increased by parting the roots. *Synonyme*: 1, *Ruellia oblongifolia*.

oblongifolia 1 . Blue 8, H. Her. P. 1 Carolina . 1832

CALOPHYLLUM, *Linn.* Expressive of the beautiful leaf; and taken from *kalos*, beautiful, and *phyllon*, a leaf. *Linn.* 15, Or. 1, Nat. Or. *Clusiadææ*. Large-growing timber trees of considerable value. Sandy loam suits them best; and young plants are easily procured from cuttings. *Synonyme*: 1, *Cátaba*.

Cátaba . . . White . 5, S. Ev. T. 40 India . 1780

Ipophyllum . White . 5, S. Ev. T. 100 E. Indies 1793

spurium 1 . White . 5, S. Ev. T. 40 Malabar . 1800

Tacamahaca . White . 5, S. Ev. T. 40 Bourbon . 1822

CALOPOGON, *R. Brown*. From *kalos*, beautiful, and *pogon*, a beard; the lip is beautifully fringed. *Linn.* 20, Or. 1, Nat. Or. *Orchidææ*. This is a beautiful greenhouse plant, producing a few purple flowers on a stem, from twelve to eighteen inches high. It will grow well in peat and loam, and may be increased by dividing the tuberous roots. *Synonyme*: 1, *Limodrum tuberosum*.

pulchellus . Purple . 7, G. Ter. 1 $\frac{1}{2}$ N. America . 1771

CALÓROPHUS. See *Réstito*.

CALOSCÓRDUM, *Herbert*. From *kalos*, pretty, and *scordon*, garlic. *Linn.* 6, Or. 1, Nat. Or. *Liliææ*. A genus of bulbous plants, nearly allied to *Allium*, and requiring the same treatment as the ornamental species of that genus.

nerineiflorum . Ro. pur. 5, G. Bl. P. 1 $\frac{1}{2}$ Chusan . 1843

CALOSTÉMMMA, *R. Brown*. From *kalos*, beautiful, and *stemma*, a crown; alluding to the flowers. *Linn.* 6, Or. 1, Nat. Or. *Amaryllidææ*. These are handsome bulbous species, of tolerably easy culture; they thrive best in sandy loam and a little peat mixed; and are increased from offsets.

album . . . White 5, G. Bu. P. 1 N. Holl. . 1824

carneum . . . Flesh . 9, G. Bl. P. 1 Australia . 1837

- villosa . . . Scarlet . 7, G. Ev. S. 3 N. Hol. . 1803

CALOTHRIX, *Agardh*. The name applies to the beauty of the filaments; and is taken from *kalos*, beautiful, and *thrix*, a hair. *Linn.* 24, Or. 7, Nat. Or. *Confervaceæ*. Minute, curious marine productions, found in little patches sometimes floating—*confervicolor, distorta, fasciculata, lanata, l. fuscescens, luteola, mirabilis, nivea, scopulorum; Berkeleyana, cæspitula, hypnoides, interrupta, Mucor, rufescens.*

CALOTIS, *R. Brown*. A derivation from *kalos*, beautiful, and *ous*, an ear; alluding to the palææ of the pappus. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. This species has wedge-shaped leaves, and is very pretty; it is multiplied by divisions, and grown successfully in any common soil.

- cuneifolia . . . Blue . 6, G. Her. P. 1 N. Holland . 1819

CALÓTROPIS, *R. Brown*. Taken from *kalos*, beautiful, and *tropis*, a keel; alluding to the keel of the flower. *Linn.* 5, Or. 2, Nat. Or. *Asclepiadaceæ*. Any rich soil suits these beautiful species, young plants of which are readily obtained from cuttings, or seeds. *Synonyme* : 1, *Asclepias gigantea*.

- gigantea 1 . . . White 8, G. Ev. S. 5 E. Indies . 1890
- proera . . . White 8, S. Ev. S. 10 Persia . . 1714

CALPICARPUM, *Don*. From *calpis*, an urn, and *karpos*, fruit, alluding to the shape of the fruit. *Linn.* 5, Or. 1, Nat. Or. *Apocynaceæ*—*Roxburghii*. See *Cérbera fruticosa*. The plants in this genus are said to be species of *Köpsia*.

CALPURNIA, *Meyer*. Name of a Roman lady. *Linn.* 10, Or. 1, Nat. Or. *Fabaceæ*. See *Vinyilia*.

CÁLTHA, *Linn.* A syncope of *kalathos*, a goblet; in allusion to the likeness of the form of the corolla to a golden cup. *Linn.* 13, Or. 1, Nat. Or. *Ranunculaceæ*. The species are showy, and do best in a moist situation, but will grow and flower in a common border. Seeds, or divisions. *Synonyme* : 1, *fearioides*.

CALYCERACEÆ, a small order of obscure plants, principally from South America.

CALYCFORM, formed like a calyx.

CALYCINE, of or belonging to the calyx.

CALYCOMUS. See *Acrophýllum*.

CALYCOPIÝLLUM, *De Cándolle*. From *kalyx*, a calyx, and *phyllon*, a leaf; one tooth of calyx expands into a coloured leaf. *Linn.* 5, Or. 1, Nat. Or. *Oinchonaceæ*. For culture, &c. refer to *Mussénda*.

- candidissimum . . . White 5, S. Ev. S. 6 Cuba . . 1830

CALYCÓTOMA, *Link.* From *kalyx*, a calyx, and *tome*, a cutting. The calyx, when fallen, has the appearance of having been cut off. *Linn.* 16, Or. 6, Nat. Or. *Fabaceæ*. *Synonymes* : *Cytisus spinosus, Genista spinosa, Spartium spinosum*. See *Cytisus*.

- spinosa . . . Yellow . 6, H. Dec. S. 4 S. Europe . 1596

CALYCOLATE, } having bractæe resembling an

CALYCLATED, } external or additional calyx.

CALYMBÉNIA. See *Oxybaphus*.

CALÝPSO, *Salisbury*. Said to be from *kalypto*, to conceal; in allusion to the habitat of the plant. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. These are small, but extremely pretty species, well deserving a place in every garden. They grow best in sandy loam and peat, in a frame or warm border, by a south wall, and are increased by offsets from the bulbs. *Synonymes* : 1, *C. americana*; 2, *C. borealis*.

- americana 2 . . . Pink . 5, H. Ter. . $\frac{1}{2}$ N. Amer. 1820
- borealis 1 . . . Ro. br. 5, F. Ter. . $\frac{1}{2}$ N. Amer. 1805

CALÝPTRA, applied to the body which covers the theca in mosses; anything in the shape of an extinguisher.

CALYPTRÁNTHES, *Swartz*. From *kalyptra*, a veil, and *anthos*, a flower; in allusion to the peculiar manner in which the united segments of the calyx fall off. *Linn.* 12, Or. 1, Nat. Or. *Myrtaceæ*. Strong-growing ornamental timber trees, of easy management. Sandy peat suits them; and young plants are obtained by layering the branches. *Synonyme* : 1, *Eugenia caryophyllata*. See *Syzýgium*.

- caryophyllifolia 1 . . . White . 3, S. Ev. T. 25 E. Ind. 1822
- Chytracelia . . . White . 4, S. Ev. T. 25 Jamaica 1778
- Jambolána . . . White . 5, S. Ev. T. 20 E. Ind. 1796
- Zuzýgium . . . White . 6, S. Ev. T. 25 W. Ind. 1778

CALYPTRÀRIA, *Planch.*. Derived from *kalyptra*, a veil; racemes with bracts. *Linn.* 10, Or. 1, Nat. Or. *Melastomaceæ*. A magnificent plant, resembling *Medinilla magnifica*, with large showy flowers; treatment the same as for *Medinilla*, and increased by cuttings.
hæmântha. Dk. pur. 9, S. Ev. S. 2 N. Grenada.

CALYPTRION, *Gingins*. Derived from *kalyptra*, a veil, and *ion*, a violet. *Linn.* 5, Or. 1, Nat. Or. *Violaceæ*. Pretty species; peat and loam suits them; and young plants are procured from seeds. *Synonymes*: 1, *Vidua Hybânthus*, *Ionidium Hybânthus*. See *Anchidæa*.
Aublétii 1. Cream. 5, S. Ev. Cl. 6 Guiana. 1823
pyrifolium. Cream. 5, S. Ev. S. 3 Brazil. 1822

CALYSTËGIA, *Loureiro*. Named from *kalyx*, calyx, and *stega*, a covering. *Linn.* 5, Or. 1, Nat. Or. *Convolvulaceæ*. A few of these species are very interesting. They all succeed in common loamy soil, and are increased by divisions. *Synonymes*: 1, *Convolvulus sèpium*; 2, *Convolvulus spithamæus*; 3, *Convolvulus stâns*.

CALYX, the outer envelope of a flower.

CAMARÏDIUM, *Lindley*. *Kamara*, an arched roof; tip of stigma, vaulted. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. See *Cymbidium ochroleucum*.

CAMARA NUTMEG TREE. See *Acrodididium*.

CAMARU. See *Physalis pubescens*.

CAMARÏTIS, *Lindley*. Named in allusion to the chambered lip. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. The species of this desirable genus may be successfully cultivated in a warm and humid stove, placed on a sound rough block of wood, with the bases of its lower roots protected by moss. Shading must be duly attended to.

CAMÁSSIA, *Lindley*. From *quamass*, or *camass*, its native name in N. America. *Linn.* 6, Or. 1, Nat. Or. *Asphodelaceæ*. The flowers of this beautiful plant are nearly two inches in diameter. Dr. Lindley scarcely remembers to have ever seen a more strikingly handsome bulbous plant. It requires a peat border, under a north wall; and is increased by bulbs and seeds. *Synonymes*: 1, *Quamâsia esculenta*.
esculenta 1. Purple 7, H. Bu. P. 1½ Columbia. 1827

CÁMBIUM, the viscid fluid which appears between the bark and wood of Exogens, when the new wood is forming.

CAMBOGE. See *Garcinia Cambôgia* and *Cambôgia gûta*.

CAMBUY FRUIT. See *Eugenia*.

CAMELINA, *Crantz*. From *chamai*, on the ground, and *linon*, flax; in allusion to its dwarf habit. *Linn.* 15, Or. 1, Nat. Or. *Brassicaceæ*. The species have but little beauty, and require to be sown in the open border. *C. sativa* is cultivated in some parts of Europe for the sake of the oil which is obtained from the seeds. *Synonymes*: 1, *Myâgrum sativum*; 2, *Cheirânthus sylvestris*.

CAMELLIA, *Ker*. Named in honour of George Joseph Kamel, or Camellus, a Moravian Jesuit, and traveller in Asia. *Linn.* 16, Or. 8, Nat. Or. *Ternstroemiaceæ*. "All the species of *Camellia* are universally admired by every collector of plants, on account of their beautiful rose-like flowers, and elegant dark-green shining laurel-like leaves. They are very hardy greenhouse plants and are of easy culture, requiring only to be sheltered from severe frost. The best soil for them is an equal quantity of good sandy loam and peat. But some of the best *Camellia* growers have found that light loam alone answers very well. The pots should be well drained with pieces of potsherds, that they may not get soddened with too much wet, as nothing injures them more than over-watering, particularly when they are not in a growing state. When growing freely, they can scarcely have too much, and they should be watered over the leaves with a fine rose-pot; they are readily increased by cuttings, or inarching on the common kinds. The cuttings should be taken off at a joint as soon as they are ripened, and planted in sand, under a glass, where they will soon strike root; when this is the case they should be planted singly in small pots, and set in a close frame, and they must be afterwards hardened to the air by degrees." The season most proper to give the *Camellias* a general potting is February and March. After this, put them into a peach-house or vinery, or a warm greenhouse, and give the plants plenty of water while they are making their young shoots; when the season's growth is completed, and the flower-buds formed, the back of the greenhouse or even a

well-sheltered north border will suit them, for they will be seriously injured if exposed to the rays of the sun. A regular succession of flowers may be obtained from autumn till July, if attention is paid to shifting the plants to the warm atmosphere of a vinery, or pinery, &c., and to one a few degrees colder, and so on till they come to expand their flowers in the greenhouse, which in rough, bleak, cold weather, should be kept closed. The seeds of *C. oleifera* yield an excellent table oil. *Synonymy*: 1, *Sasánqua rosea*. See *Polyspóra*.

CAMPÀNIA, *Don.* From *campana*, a bell, from the form of the corolla. *Linn.* 14, Or. 2, Nat. Or. *Gesneraceæ*. A genus separated from *Drymonia*, and requiring the same treatment; they are easily increased by cuttings. *Synonymy*: 1, *Drymonia grandiflora*, *Besleria grandiflora*.

grandiflora . 1 Wh. cr. 6, S. Cl. P. 2 Santa Fee . 1848

CAMPANUMÆA, *Leib.* and *Zucc.* From *campana*, a bell, and *homoiós*, similar. *Linn.* 5, Or. 1, Nat. Or. *Campanulacææ*. For culture refer to *Campánula*.

lanceolata . Gr. blue 7, F. Her. P. 1 Japan . . .

CAMPÁNULA, *Linn.* The name is a diminutive of *campana*, a bell; on account of the resemblance thereto of the corolla. *Linn.* 5, Or. 1, Nat. Or. *Campanulacææ*. This is a showy and well-known genus; some of the species are tall-growing handsome plants, while others scarcely rise more than a few inches from the ground. They are all of easy culture in the border of the flower garden or shrubbery, where the hardy kinds merely require sowing; the less hardy kinds should be sown on a hotbed, or in the greenhouse, and when up potted off. The roots of *C. Rapunculus* are occasionally eaten. *Synonymy*: 1, *rupéstris*; 2, *Rosella decumbens*; 3, *C. capitata*; 4, *neglecta*; 5, *spatulata*; 6, *speciosa*; 7, *diffusa*; 8, *betonicæfolia*; 9, *Adenophora liliifolia*; 10, *C. baldensis*; 11, *multiflora*; 12, *glomerata petraea*; 13, *lobelioides*; 14, *gummifera*; 15, *glomerata dahurica*; 16, *planiiflora*; 17, *flexuosa*; 18, *integerrimum*. See *Platyodon*, *Symphitandra*, *Adenophora*, *Lightfootia*, *Prismatocarpus*, *Sámolus*, *Wahlenbergia*.

CAMPANULACEÆ, an order of well-known plants, chiefly herbaceous, of which the common hair bell is an example.

CAMPANULATE, bell-shaped.

CAMPEACHY WOOD, or **LOGWOOD**. See *Hæmatoxylon Campeachianum*.

CAMPFLIA, *Richard*. So named from *kampe*, a bending, and *helios*, the sun. *Linn.* 6, Or. 1, Nat. Or. *Commelynæcæ*. An interesting plant, growing in any rich soil, and increased by seeds. *Synonymes*: 1, *Tradescantia Zanònia*. *Zanònia* 1 . . . Blue . 8, S. Her. P. 2 W. Indies . 1759

CAMPHIRE TREE. See *Cinnamòmum camphora*.

CAMPHOR TREE. See *Cinnamòmum camphora*.

CAMPHOR CHINESE. See *Cinnamòmum camphora* and *glaiucum*.

CAMPHOR SUMATRA. See *Dryobálanops camphora*.

CAMPHOR OIL OF BORNEO. See *Dryobálanops camphora*.

CAMPHOROSMA, *Linn.* Named from *camphora*, camphor, and *osme*, a smell; the former a Latin and the latter a Greek word. *Linn.* 4, Or. 1, Nat. Or. *Chenopodiæcæ*. The species have but little beauty. *C. monspeliaca* abounds with a volatile oily salt, and is warm and stimulating.

monspeliaca . . . Apetal . 8, G. Ev. S. 1½ S. Europe 1640
acuta, ovata.

CAMPION. See *Cucubalus*.

CAMPION ROSE. See *Lýchnis*.

CAMPOMANÉSIA, *De Candolle*. Named after Rodríguez, C. de Campomanes, a Spanish naturalist. *Linn.* 12, Or. 1, Nat. Or. *Myrtæcæ*. For culture, &c., refer to *Callistemon*.

linearifolia . . . White . 4, G. Ev. S. 3 Peru . . 1824

CAMPFERIA, *Presl*. *Linn.* 24, Or. 1, Nat. Or. *Polypodiæcæ*. *Synonymes*: 1, *Ptëris biaurita*; 2, *Ptëris memorialis*.

biaurita 1 . Pa. yel. & br. 5, S. Her. P. 1½ W. Ind. 1824
memoralis 2 Yellow brn. 6, S. Her. P. 1½ I. Bour. 1823

CAMPTOSÈMA, *Hooker*. From *kamptos*, flexible, and *sema*, a standard. *Linn.* 17, Or. 4, Nat. Or. *Pabæcæ*. A genus separated from *Kenédya*, and requiring the same treatment. *Synonyme*: 1, *Kenédya splendens*.

rubicunda . . . Scarlet . 6, G. Ev. Tu. 3 N. S. W. . 1788

CAMPYLÁNTHUS, *Roth*. Named from *kampylos*, a curve, and *anthos*, a flower. *Linn.* 2, Or. 1, Nat. Or. *Primulæcæ*. An ornamental plant succeeding in sandy loam and peat; and increased from cuttings in sand, under a glass.

salsoloides . . . Purple . 3, G. Ev. S. 1. Teneriffe . 1825

CAMWOOD. See *Báphia nitida*.

CAMPYLOBÓTRYIS, *Hook*. From *campyle*, a curve, and *botrys*, a raceme; the racemes of the flowers are curved. *Linn.* 4, Or. 1, Nat. Or. *Rubiæcæ*. The species at present introduced are very pretty little plants, growing in peat and leaf mould, and are readily increased by cuttings placed under a glass.

discolor . . . Red. wht. 6, S. Ev. S. 1½ Brazil . 1850
refúlgens . . . Scarlet . 6, S. Ev. S. 1½ Brazil?

CANADA RICE. See *Zizánia aquática*.

CANADA TEA. See *Garulthéria procumbens*.

CANADIAN MUGWORT. See *Artemisia canadensis*.

CANANGONG. See *Mesembryánthemum æquilaterale*.

CANÁLICULATE, channelled, furrowed.

CANARINA, *Linn.* So called from the species being natives of the Canaries. *Linn.* 6, Or. 1, Nat. Or. *Campanulæcæ*. These are desirable plants, producing pretty flowers in the autumn and winter. Unless the roots are placed in the stove after they begin to grow in the spring, they do not flower so well in the greenhouse. A mixture of light loam and peat is the best soil for them; plants are procured from cuttings, which strike in soil, or by dividing the roots.

Canácula . . . Orange 2, G. Her. P. 3 Canaries . 1696
lævigata . . . Orange 2, G. Her. P. 3 Canaries . 1825

CANARY-BIRD FLOWER. See *Tropæolum adáncum*.

CANARY GRASS. See *Phálaris*.

CANARY SEED. See *Phálaris*.

CANAVÁLIA, *Dec*. Canavali is its name in Malabar. *Linn.* 16, Or. 6, Nat. Or. *Fabæcæ*. These species have but little to recommend them; for culture, &c., see *Dólíchos*. *Synonymes*: 1, *Dólíchos ensiformis*; 2, *D. obtusifolius*; 3, *D. róseus*.

CANCELLATE, like lattice-work.

CANDÁRUM. See *Pýthion*.

CANDELABRUM, or **CHANDELIER TREE**. See *Pandanus candelabrum*.

CANDLEBERRY MYRTLE. See *Myrica*.

CANDÓLLEA, *Labillardière*. In honour of Augustus Pyramus Decandolle, F.M.R.S. and L.S., Professor of Botany at Geneva, author of many approved botanical works. He was one of the first botanists of his time. *Linn.* 18, Or. 2, Nat. Or. *Dilleniæcæ*. A beautiful genus, thriving best in a mixture of loam, peat, and sand; cuttings, in the same kind of soil, root readily under a glass. See *Hibbertia*.

Brundis . . . Yellow . 6, G. Ev. S. 6 S. River . 1837
cuneiformis . . . Yellow . 7, G. Ev. S. 6 N. Holl. . 1824
Hugelii . . . Yellow . . G. Ev. S. 3 S. River . 1837

CANDY CARROT. See *Athamánta Matthiòla*.

CANDYTUFT. See *Iberis*.

CANE-BRAKE. See *Arundinaria*.

CANÉLLA, *P. Browne*. From *canna*, a reed; in allusion to the bark being rolled like cinnamon. *Linn.* 16, Or. 5, Nat. Or. *Canellaceæ*. These are valuable and ornamental trees, about fifteen feet high, best cultivated in loam, peat, and sand; cuttings of the well-ripened wood taken off at a joint will root in sand in a moist heat; they must not be deprived of any of their leaves. Sweet recommends large old cuttings as the best. The bark is aromatic and pungent.

alba . . . White . 6, S. Ev. T. 40 W. Indies . 1735
laurifolia White . 6, S. Ev. T. 25 S. America. 1820

CANELLACEÆ, a small order of West Indian aromatic plants, consisting of only a few species.

CANÉSCENT, hoary, approaching to white.

CANINA, pertaining to dogs.

CANKER BRAND. See *Urèdo caricæ*.

CÁNNA, *Linn.* The Celtic name for a cane or mat. *Linn.* 2, Or. 1, Nat. Or. *Marantaceæ*. This is a genus worthy of cultivation in all collections, as its lively flowers are produced in great abundance and at all seasons; many species are now in our collections; the most splendid is *iridiflora*, which is amongst the handsomest plants of the stove; rich light soil suits the species best; they are propagated by divisions at the root, or by seeds, which they produce in abundance. *Synonyme*: 1, *C. chinensis*.

CANNABINACEÆ, or Hempworts. A small order of herbaceous and annual plants, of which the hop and the hemp are examples.

CÁNNABIS, *Linn.* So called from *ganch*, its Arabic name, and from the Celtic appellation *can*, reed, and *ab*, small. *Linn.* 22, Or. 5, Nat. Or. *Cannabaceæ*. One species of this genus produces the hemp. The hemp to which we owe so many of our comforts is *C. sativa*. Neither is handsome, and they require only to be sown in the open ground and kept clean. A most powerfully narcotic gum resin is obtained from both species.

indica . . . Green 8, H. A. 2 E. Indies . 1800
sativa . . . Gr. wht. 6, H. A. 2 India . . .

CANNON-BALL TREE. See *Courouppia guianensis*.

CANOE BIRCH. See *Bétula papyræa*.

CANSÓRA, *Don*. From *Kansjan-cora*, the Malabar name of one of the species. *Linn.* 4, Or. 1, Nat. Or. *Gentianaceæ*. A genus of annuals of no merit. For culture, &c., see *Ecacum*.—*Parishii*.

CANTERBURY BELLS. See *Campánula medium*.

CANTHARELL. See *Cantharellus*.

CANTHARÉLLUS, *F. Adams*. An alteration of the French name *chanterelle*. *Linn.* 24, Or. 9, Nat. Or. *Agaricæ*. Interesting productions. *C. cibarius* is one of the best of our eatable mushrooms. The best way of preserving them for use, is to string them in rows, and after they have become flaccid, to hang them in a dry place where they can have plenty of air. They then form a delicious ingredient in rich gravies, &c. *Synonyme*: 1, *Merùius purpuratus*.—*aurantiacus*, *cibarius*, *cinereus*, *cornucopoides* 1, *lævis*, *lobatus*, *lutescens*, *umbonatus*, *undulatus*.

CÁNTHIUM, *Lambert*. Cantix is the Malabar name. *Linn.* 5, Or. 1, Nat. Or. *Cinchonaceæ*. This is an ornamental shrub, and will grow in any rich soil; increase is by cuttings. See *Gardènia* and *Wèbera*.

dhbium . . . White . 7, G. Ev. S. 3 E. Indies . 1824

CANTUA, *Juss.* From *cantu*, the name of one of the species in Peru. *Linn.* 5, Or. 1, Nat. Or. *Polemoniaceæ*. This is a genus of beautiful shrubs, requiring an airy greenhouse, and very much the same treatment as *Fuchsia*. *C. buxifolia* is the magic tree of the Peruvian Indians, and was formerly used to decorate their houses on feast days. Loam, peat, and sand is the best soil, and the species are easily increased by cuttings. *Synonymes*: 1, *Periphrágmōs dependens*; 2, *Periphrágmōs flexuosus*. See *Gilia* and *Hoitzia*.

buxifolia 1 . Yel. ro. 4, G. Ev. S. 5 Peru . . . 1846

CANTŪLA. See *Furcraea Cantula*.

CAOUTCHOUC, or Indian rubber, is the inspissated juice of various plants. The Caoutchouc of commerce is principally obtained from *Ficus elástica* and *Siphonia elástica*.

CAPE HORN PEA. See *Psium americanum*.

CAPE JESSAMINE. See *Gardenia florida*.

CAPE PHILLYREA. See *Cassine capensis*.

CAPER SPURGE. See *Euphorbia Lathyris*.

CAPER TREE. See *Capparis*.

CAPERŌNIA. See *Croton*.

CAPILLACEOUS, } very slender, like a hair.

CAPILLARY,

CAPILLARY-MULTIFID, divided in slender hair-like segments.

CAPILLATE, hairy, stringy.

CAPĪLLUS-VĒNERIS. See *Adiantum Capillus-Veneris*.

CAPITATE, growing in a head; a stigma is capitate when it is large, round, and blunt.

CAPITELLATE,

CAPITULAR, } growing in small heads.

CAPITULATE,

CAPNOPHYLLUM, *Gærtner*. So called from *capnos*, smoke, and *phyllon*, a leaf. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. A mere weed. *Synonymes*: 1, *Cnivium africanum*, *Rumia capensis*—africana 1.

CAPPARIDÆÆ. Herbaceous plants and shrubs inhabiting the tropics, or in countries bordering upon them.

CAPPARIS, *Linn.* So called from the Arabic *kapar*, capers. *Linn.* 13, Or. 1, Nat. Or. *Capparidææ*. This is a genus of ornamental low shrubs; they grow well in a mixture of loam and peat: and cuttings root in sand, in heat, under a glass. *C. spinosa* is a good free-flowering species, when allowed plenty of room. The flower-buds of the caper form a well-known pickle; they are stimulant, antiscorbutic, and aperient; and the bark is said to be diuretic. *Synonymes*: 1, *acutifolia*, *acuminata*; 2, *octandra*; 3, *Fontanèsii*; 4, *arborescens*; 5, *uncinata*. See *Cratæva*, *Morrisonia*, *Niebuhrria*, *Stephania*.

CAPRÀRIA, *Linn.* The leaves of this genus are liked by goats; hence the name, from *caper*, a goat. *Linn.* 14, Or. 2, Nat. Or. *Scrophulariaceæ*. Uninteresting species, of easy culture—*biflora*, *cuneata*, *humilis*, *lanceolata*, *undulata*. See *Stemodia*.

CAPREOLATE, having tendrils.

CAPRIFOLIÆÆ, the honeysuckle tribe. All the Caprifoliæ possess properties of considerable interest.

CAPRIFOLIUM, *Romer* and *Schultes*. Called poetically goat-leaf; and is derived from *caper*, a goat, and *folium*, a leaf; in reference to the climbing and twining habit of the plant. *Linn.* 5, Or. 1, Nat. Or. *Caprifoliææ*. This is a genus of favourite climbing plants, well adapted for planting against walls, bowers, or trellis-work. Common soil suits them; and cuttings taken off early in autumn readily root in a shady border. *Synonymes*: 1, *Lonicera glabratum*; 2, *Cap. pubescens*; 3, *L. caprifolium*; 4, *Caprifolium japonicum*; *C. baleàricum*.

CAPSĒLLA, *Moench*. So called from a diminution of capsule. *Linn.* 15, Or. 1, Nat. Or. *Brassicææ*. Weedy plants. *Synonyme*: 1, *Thlaspi bursa-pastoris*—*bursa-pastoris* 1, b. *apétala*, b. *coronopifolia*, b. *integrifolia*, b. *minor*.

CÁPSICUM, *Linn.* So named from *kápto*, to bite; on account of the hot, pungent qualities of the pericarp. *Linn.* 5, Or. 1, Nat. Or. *Solanaceæ*. This genus is ornamental, but chiefly cultivated for its fruit, which is much used in pickles; they are easily cultivated in any rich open soil; and readily increased from seeds. *Synonyme*: 1, *cerasifórme*.

CARAGUATA, *Plumier*. Its name in S. America.

Linn. 6, Or. 1, Nat. Or. *Bromeliaceæ*. An interesting plant, but with no great beauty; for culture, &c., see *Bromelia*. *Synonyme*: 1, *Tillandsia lingulata*.

lingulata . . . Yellow . 6, S. Epi. . 2 Jamaica . 1795

CARAJURA, or **CHICA**. See *Bignònia Chica*.

CARÁLLIA, *Roxburgh*. From *Carillie*, the name of *C. lucida* in the Telinga language in Hindoostan. *Linn.* 11, Or. 1, Nat. Or. *Rhizophoracæ*. An ornamental stove tree, about twenty feet high, succeeding best in a mixture of sandy peat and loam, and may be increased from cuttings in sand, under a glass.

lucida . . . Yellow . 4, S. Ev. T. 20 E. Indies . 1820

CARALLUMA, *R. Brown*. Its Indian name. *Linn.* 5, Or. 2, Nat. Or. *Asclepiadacæ*. This succulent genus of curious plants is allied to *Stapelia*; they vary in height from one to two feet. The best soil for them seems to be a mixture of loam and brick rubbish. The pots require to be well drained, and the plants cautiously watered, except about the time of flowering, when they ought to have a liberal supply. Cuttings root freely, if they are allowed to dry until they begin to shrivel before being planted.

CARAPICHEA, *Aubl.* *Carapiche* is the Caribean name of one of the species. *Linn.* 5, Or. 1, Nat. Or. *Cinchonacæ*. Stove shrubs of moderate dimensions, bearing white but not showy flowers, growing in a mixture of light sandy loam and heath mould, and propagated by cuttings planted in pots of sand. See *Cephaelis*.

CARATS, the seeds of *Erythrina Abyssinica*.

CARAUNDA. See *Carissa Carándas*.

CARAWAY. See *Carum Carui*.

CARBONIZED, burned to coal.

CARBOZOTIC ACID is obtained by the action of nitric acid on indigo.

CARDÁMINE, *Linn.* From *kardia*, the heart, *damas*, to subdue; stomachic quality of the plants, or perhaps a diminutive of *kardamon*, watercress, the taste being similar. *Linn.* 15, Nat. Or. *Brassicacæ*. An interesting genus, of the simplest culture and propagation.

Synonyme: 1, *C. bellidifolia*. See *Macropodium*, *Pteroneuron*.

- CARICA**. See *Ficus Carica*.
- CARINA**, a keel like that of a boat, also the lower petal of a papilionaceous flower.
- CARINATE**, keel-shaped.
- CARINATELY-CONCAVE**, hollowed so as to resemble a keel externally.
- CARINATELY-WINGED**, having a wing like a keel.
- CARIOPSIS**, a one-celled, small, indehiscent pericarp, adhering to the seed which it contains, as the grain of grasses.
- CARISSA**, *Linn.* Derivation not known. *Linn.* 5, Or. 1, Nat. Or. *Apocynaceæ*. This is an ornamental genus, the species attain from six to twenty feet high, and to succeed well require a mixture of peat and loam; and to grow in pots, should be carefully drained, as the plants are impatient of much water. Cuttings root freely in sand, under a glass, in heat. See *Holarthrena*.

- CARPO-BALSAMOM. See *Balsamodendron*.
- CARPODĪNUS, *R. Brown.* From *karpos*, fruit, and *dinos*, a circle; the fruit being round. *Linn.* 5, Or. 1, Nat. Or. *Poeyniaceæ*. A fruiting shrub, attaining about eight feet high, and growing well in a mixture of open loam and sandy peat, and increased, without difficulty, from cuttings.
- dālcis . . . Green . 6, S. Ev. S. 8 S. Leone . 1822
- CARPODŌNTOS, *Labillardiere.* From *karpos*, a fruit, and *odontos*, toothed; the cells or carpels toothed at the apex. *Linn.* 13, Or. 6, Nat. Or. *Hypericææ*. An ornamental greenhouse plant, growing to the height of twenty feet; it thrives best in peat and loam mixed, and cuttings root freely in sand, under a glass.
- heida . . . Yellow . 6 G. Ev. T. 20 N. Holland 1820
- CARPOLOGY, the science which treats of the structure of fruits and seeds.
- CARPOPOGON. See *Mucāna*.
- CARRAGEEN MOSS. See *Chondrus crispus*.
- CARRAWAY. See *Cārum*.
- CARRICHTĒRA, *De Candolle.* Probably without meaning. *Linn.* 15, Nat. Or. *Brassicææ*. This is a pretty annual, growing well when sown in the open ground in a dry situation. *Synonymæ*: 1, *Vella annuus*.
- Vella 1 . . Yellow . 6, H. A. $\frac{1}{2}$ Eng., sandy fle.
- CARROT. See *Daucus*.
- CARTHAGENIAN APPLE. See *Pānica*.
- CARTHAMUS, *Tournefort.* From its Arabic name *qorium*, to paint; the flowers yield a fine colour. *Linn.* 19, Or. 1, Nat. Or. *Asterææ*. Interesting annuals, requiring to be sown on a gentle hotbed, and afterwards transplanted where they are intended to flower. See *Car-duncellus, Cirsium, Heracantha*.
- oxyacantha . Yellow . 7, H. A. 3 Caucasus . 1818
 tinctorius . Orange . 6, H. A. 3 Egypt . . 1551
- CARTILAGINOUS, gristly.
- CARTONĒMA, *R. Brown.* From *kartos*, shorn, and *nema*, a filament; in allusion to the stamens. *Linn.* 6, Or. 1, Nat. Or. *Commely-nææ*. A pretty annual, requiring merely to be sown in sandy peat, and treated in the stove.
- spicata . . Blue . 7, S. Her. P. 1 N. Holland 1822
- CARTŌFFEL. See *Solanum tuberosum*.
- CART-WRACK. See *Fucus serratus*.
- CĀRUI. See *Cārum Cāru*.
- CĀRUM, *Koch.* From *Caria*, in Asia Minor, being originally found there. *Linn.* 5, Or. 2, Nat. Or. *Apiææ*. One species of this genus, *C. Cāru*, produces the seeds so generally known by the name of caraway seeds; they are hardy biennials, and require merely to be sown in the open ground. See *Ptychotis*.
- cāru . . . White . 5, H. Her. P. 2 Brit. pastures.
simplex.
- CARUNCLE, a small protuberance.
- CARUNCULĀRA, *Haworth.* Derived from *carun-cula*, a fleshy protuberance; in reference to the flowers. *Linn.* 5, Or. 2, Nat. Or. *Ascle-piadiææ*. A curious succulent plant; for culture, &c., see *Stapelia*. *Synonymæ*: 1, *Stapelia pedunculata*.
- pedunculata 1 . Br. pur. . 7, S. Ev. S. $\frac{1}{4}$ C. G. H. 1790
- CARUNFEL. See *Caryophyllus aromaticus*.
- CARŪPA. See *Carāpa*.
- CĀRVI. See *Cārum Cāru*.
- CĀRYA, *Nuttall.* From *caryon*, signifying a nut; in allusion to the fruit. *Linn.* 21, Or. 9, Nat. Or. *Juglandææ*. A genus of timber-trees, growing about thirty feet high; they succeed in common soil, and increase by seeds or layers. *Synonymæ*: 1, *Juglans squamosa, alba*; 2, *J. amara*; 3, *J. compressa*; 4, *J. obcordata*; 5, *J. angustifolia, olivæformis*; 6, *J. porcina*; 7, *J. sulcata*.

- CĀRYOPHYLLĀTA. See *Gẽum*.

CARYOPHYLLACEÆ, or Clove-worts. An order containing many species; a few bear handsome flowers, the carnation and pink for examples, but the most part are not worth cultivating.

CARYOPHYLLUS, *Linn.* From *karyon*, a nut, and *phyllon*, a leaf; referring to the appearance of the flower-buds. *Linn.* 12, Or. 1, Nat. Or. *Myrtaceæ*. The species *aromaticus* grows to about twenty feet high, and produces the article known as cloves. It grows best in a mixture of sandy peat and loam, in a strong steady heat. The plants are rather scarce, owing to the difficulty of keeping them in winter; cuttings in sand root readily under a glass, in a moist heat.

aromaticus . Yel. wh. 5, S. Ev. T. 20 Moluccas . 1797

CARYOPHYLLUS. See *Diánthus caryophyllus*.

CARYOTA, *Linn.* The Greeks applied this name to a cultivated date. *Linn.* 21, Or. 9, Nat. Or. *Palmaceæ*. A noble and beautiful genus of palms, growing to the height of eighty feet; the best way of treating them is in sandy loam, and a warm moist atmosphere; increased by seeds. *Synonyme*: 1, *C. sobolifera*. See *Oránia*.

CATARRHAL, of or belonging to a cold.

CATASÆTUM, *Richard*. Not explained. *Linn.*

20, Or. 1, Nat. Or. *Orchidæ*. All the species of this genus are strong, rapid-growing plants, and from the singular formation of the flowers, they well deserve a place in every collection. They should be kept cool and dry when torpid, forced gently into growth, and when growing freely, kept in a strong heat, and copiously supplied with water: this treatment should be applied to all plants of a similar habit. They require to be potted in the same kind of soil, and in a similar manner to the *Stanhopeas* and *Gongoras*. See *Myánthus*. *Synonymes*: 1, *Myánthus barbatus*; 2, *Myánthus proboscideus*; 3, *Myánthus caldösus*; 4, *Myánthus cornutus*; 5, *Myánthus deltoideus*; 6, *Monacánthus discolor*; 7, *Myánthus lanciferus*; 8, *Monacánthus longifolius*; 9, *Monacánthus roseo-álbus*; 10, *Myánthus saccatüs*; 11, *Myánthus spinösus*; 12, *C. CATERPILLAR. See *Scorpiurus*.

CATESBÆA, *Gronovius*. After Mark Catesby, author of the Natural History of Carolina. *Linn.* 4, Or. 1, Nat. Or. *Cinchonaceæ*. An ornamental genus, the species of which attain from two to twelve feet high; they thrive best in light turfy loam, and peat soil. Being very subject to the attacks of insects, great watchfulness is required to keep them clear, or the plants never succeed or flower. Cuttings root in sand, under a glass, in heat.

CATTLEA, *Lindley*. In honour of William Cattle, Esq., of Barnet, Hertfordshire, a famous patron of botany, and one of the most ardent collectors of rare plants of his day. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. Some of the species of this splendid genus of plants are most magnificent when in flower, as *C. crispata*, *labiata*, and *Mössia*; and these three vie with each other in the beauty of their flowers: when they are well grown, each of these has generally from four to six flowers on a spike; in *C. crispata* the sepals and petals are pure white, the latter much curled, while the lip or labellum is purple in the inside, and white outside. The flowers of *C. labiata* are very large and showy, the sepals and petals being a delicate rose-colour, and somewhat curled; the outside of the labellum is also rose-colour, and the inside blotched, and striped with deep carmine. The flowers of *C. Mössia* very much resemble those of *labiata*, only they are larger, the circumference of the flower being about twenty-four inches. All the other species are highly deserving of cultivation, if only for the splendour of their flowers. For culture and propagation they may be referred to the *Stanhopeas*. See *Sophrontis*. *Synonymes*: 1, *C. Karwinskii*, *Sobralia citrina*; 2, *Broughtonia Domingensis*, *Leilidopsis Domingensis*; 3, *C. labiata Lemoniana*; 4, *C. CAUCALIS, *Hoffmannseg.* A name used by Hippocrates and Theophrastus. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. The plants have little beauty, and are easily managed by merely sowing the seed in the open ground—*daucoides*, *glabra*, *hispida*, *latifolia*, *leptophylla*, *mauritanica*, *pumila*. See *Orlaya*, *Platyspermum*, *Torilis*, *Turgènia*.

CAUDATE, tailed, being like a tail.

CAUDEX, the trunk or stem of a tree.

CAUDICULA, a small membranous process, on which the pollen of orchidaceous plants is fixed.

CAULESCENT, acquiring a stem.

CAULIALATA, wing-stemmed.

CAULICULE, the little stem of the embryo which unites the cotyledons with the radicle.

CAULIFLOWER. See *Brassica oleracea cauliflora*.

CAULINE, belonging to the stem.

CAULINIA. See *Kennèdya*.

CAULOPHYLLUM, *Michaux.* From *kaulos*, a stem, and *phyllon*, a leaf; being so terminated by the stalks, its leaves appear a continuation of the stem. *Linn.* 6, Or. 1, Nat. Or. *Berberidaceæ*. A singular plant, that requires to be grown in sandy peat, and is increased by dividing the roots. *Synonyme*: 1, *Leontice thalictroides*.

thalictroides 1 Yel. grn. 5, H. Tu. P. N. Amer. 1755

CAVANILLEA. See *Diòsypyros Mabòla*, and *Embryopteris gelatinifera*.

CAUSTIC, having a burning quality.

CAVANILLESIA. See *Pourrètia*.

CAVUS, hollow, full of holes.

CAYENORA. See *Terminalia argentea*.

CAYENNE BUTTER. See *Capsicum frutescens*.

CEANOTHUS, *Linn.* From *keanto*, to prick; a name used by Theophrastus to denote a spiny plant. *Linn.* 5, Or. 1, Nat. Or. *Rhamnaceæ*.

A genus of showy plants, growing from one to twenty feet high; they thrive well in peat and loam; cuttings strike in sand, under a glass. See *Colubrina*, *Pomaderris*, *Willmètia*. *Synonymes*: 1, *C. cæruleus*; 2, *Rhamnus capensis*; 3, *R. lævigatus*; 4, *R. mystacinus*; 5, *R. sphaerospermus*; 6, *Celastrus zeylanicus*.

CEBADILLA or **CEVADILLA**. See *Asayrea officinalis*.

CECROPIA, *Linn.* After Cecrops, king of Athens, whose legs were fabled to be snakes. *Linn.* 22, Or. 2, Nat. Or. *Artocarpacææ*. Beautiful trees, attaining twenty or thirty feet high, they have five peltate leaves, which give the plants a fine appearance; a mixture of loam and peat suits them, and strong cuttings planted in sand, under a glass, with a little heat, root freely.

CEDRUS, *Miller.* Found plentifully on the banks of a brook in Judæa, named Cedron; whence the name. *Linn.* 21, Or. 10, Nat. Or. *Pinacæceæ*. The two species of this genus are not only ornamental but highly valuable for the fine timber they yield. They grow ninety feet high, delighting in sandy loamy soil, and are increased by seeds generally, but *C. Deodara* takes readily if grafted upon the common larch. *Synonymes*: 1, *Pinus Deodara*; 2, *Pinus Cedrus*.

CELERAC. See *Apium graveolens rapæceum*.

CELERY. See *Apium graveolens*.

CELL, the hollow part of a capsule, in which the seeds are lodged, and the part of the anthers which contains the pollen.

CELLULAR, composed of cells.

CELÓSIA, *Linn.* From *celos*, burnt; the flowers of some of the species appear as it were singed or burnt. *Linn.* 5, Or. 1, Nat. Or. *Amarantacæceæ*. These are all ornamental or curious plants, growing from one to five feet high; the species should be sown in a hotbed frame, or in a hothouse, and when of a sufficient strength, they should be transplanted into single pots, and placed amongst other hothouse or greenhouse annuals. See *Aërua*, *Deeringia*, *Lestibudësia*.

CÆMBRA, signifying a pine. See *Pinus Cæmbra*.

CENANGIUM, *Fries.* From *kenos*, empty, and *ageion*, a vessel; in reference to the empty or hollow receptacle. *Linn.* 24, Or. 9, Nat. Or. *Helvellæccæ.* Minute species of *Fungi*, appearing generally upon plum and cherry barks, and as well upon the Mountain Ash and dead Firs—*Aucuparia*, *Cerasi*, *ferruginosum*, *Prunæstri*, *quercinum*, *fuliginosum*, *pulveraceum*.

CENCHRUS, *Linn.* From *kegchros*, the oriental name of the millet. *Linn.* 3, Or. 1, Nat. Or. *Graminæccæ.* These, as well as the greater part of the *Graminæccæ*, are very curious; and the species of this genus grow from one to two feet high, and the principal part of them only requires to be sown in the open ground. See *Anthephora*, *Centotheca*, *Echinaria*.

australis . . .	Apetal.	. . . 7, Grass	1	N. Holl.	. 1822
echinatus . . .	Apetal.	. . . 9, Grass	2	W. Ind.	. 1691

CENIA, *Commelin.* Derived from *kenos*, empty; in allusion to its inflated calyx. *Linn.* 19, Or. 2, Nat. Or. *Asteræccæ.* *Synonymy*: 1, *Lidbeckia turbinata*—pruinosa, turbinata, 1, tur. alba, tur. formosa.

CENISIA, growing on Mount Cenis.

CENOMYCE, *Acharius.* From *kenos*, empty, and *mykes*, a fungus; alluding to the hollowness of the little receptacles. *Linn.* 24, Or. 8, Nat. Or. *Parmeliæccæ.* An extensive genus of interesting *Lichens*, discoverable upon moor

and mountain land, and also upon old wood, &c.—*alcicornis*, *bacillaris*, *bellidiflora*, *cervicornis*, *coccifera*, *c. cornucopioides*, *deformis*, *delicata*, *digitata*, *ecmocyma*, *c. gracilis*, *rudivæfolia*, *fimbriata*, *f. cornuta*, *f. radiata*, *furcata*, *f. subulata*, *gonorega*, *g. anomæa*, *papillaria*, *pyxidata*, *racemosa*, *rangiferina*, *r. pingens*, *sparsa*, *unciatis*, *vermicularis*.

CENOCOCCEUM, *Fries.* From *kenos*, empty, and *kokkos*, a berry. *Linn.* 24, Or. 9, Nat. Or. *Lycoperdæccæ.* Found in woods.—*geophilum*.

CENOLOPHIUM, *De Candolle.* From *kenos*, empty, and *lophos*, a crest. Ridges of ribs of fruit, hollow inside. *Linn.* 5, Or. 2, Nat. Or. *Apiæccæ.* See *Cnidium*.

CENTAUREA, *Linn.* With one of these plants, the Centaur Chiron cured the wound made in his foot by the arrow of Hercules. *Linn.* 19, Or. 3, Nat. Or. *Asteræccæ.* The species of this genus are, for the greater part, ornamental plants, growing from half a foot to five feet high. The hardy annual and biennial kinds need only to be sown in the open ground; the half-hardy ones should be sown on a mild hotbed, where they must remain till strong enough to be planted out in the borders. *Synonymy*: 1, *C. ceratophylla*; 2, *C. caucásica*; 3, *C. exallata*; 4, *C. argyrophylla*; 5, *C. unarifolia*; 6, *C. sibirica*; 7, *C. sulphurea*; 8, *C. leucántha*; 9, *C. virgata*; 10, *C. rigescens*; 11, *C. Zannóni*; 12, *C. variegata*. See *Galactites*, *Leuzea*, *Rhopontica*, *Serratula*, and *Plectocéphalus*.

CÈPHALÀNTHUS, Linn. From *kephale*, a head, and *anthos*, a flower; referring to the flowers being disposed in globular heads. *Linn.* 4, Or. 1, Nat. Or. *Cinchonaceæ*. An ornamental shrub, growing seven feet high; the soil best for it is a mixture of sandy peat and loam; propagation is easy, the ripened cuttings root readily under a glass, or by layers. See also *Naucllea Cadamba* and *N. stellata*.

occidentalis . White . 8, H. De. S. 7 N. Amer. 1735
brachypodus White . 8, H. De. S. 7 N. Amer.

CÈPHALÀRIA, De Candolle. From *kephalos*, a head; flowers collected in heads. *Linn.* 4, Or. 1, Nat. Or. *Dipsacaceæ*. See *Succisa* and *Scabiosa*.

CÈPHALÈIS. See *Cephalis*.

CÈPHALIC, medicinal to the head.

CÈPHALÌNA. See *Sarcocèphalus*.

CÈPHALÒPHORA, Cavanilles. From *kephale*, a head, and *phoreo*, to bear; the flowers are united in little heads. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. An annual of little beauty,

and easy culture. *Synonymes*: 1, *Hymenopappus glaucus*, *Græmia aromatica*—glauca 1.

CEPHALOSTIGMA. See *Campânula*.

CEPHALOTAXUS, *Sieb. & Zucc.* Derived from *kephale*, a head, and *taxus*, a yew; the plants have the habit of the yew. *Linn.* 22, Or. 13, Nat. Or. *Taxaceæ*. Handsome coniferous shrubs and trees, in some instances growing to the height of sixty feet. They are of easy culture, merely requiring to be planted in common soil, and may be increased by cuttings and seeds. *Synonymes*: 1, *C. macrophylla*, *Taxus Harringtonia*.

CEPHALOTRICHUM, *Link.* From *kephale*, a head, and *thrix*, a hair; the heads being covered with hairs. *Linn.* 24, Or. 9, Nat. Or. *Botrytaceæ*. A minute fungus discernible in general on decayed or decaying branches—*nânium*.

CEPHALOTUS, *R. Brown.* From *kephalotes*, headed; its filaments of stamens are capitate. *Linn.* 11, Or. 6, Nat. Or. *Cephalotaceæ*. A most curious little plant of rather difficult management; it should be potted in chopped moss and boggy soil, mixed, the pots well drained, and the plants carefully watered. A glass should be placed over it at all times, and it should be allowed plenty of light and a temperature of sixty-five or seventy degrees; offsets treated in the same manner will speedily take root.

- foliularis . . . White . . . 4, G. Her. P. 1/3 N. Holl. 1822

CERACEOUS, wax-like.

CERADIA, *Linkley.* From *keras*, a horn, in allusion to the horned appearance of the branches. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. In the garden of his grace the Duke of Devonshire, at Chatsworth, this very singular plant was introduced in 1844. "It has the appearance of a shrub of coral, spreading its short leather-coated branches upwards like a candelabra." In culture it should be favoured with a cool stove, and be grown in sandy soil. Portions of the rugged branches strike root freely.

- furcata . . . Pa. yel. . . 1. S. Ev. S. 1/2 Africa . . . 1844

CERAMIA. See *Erica*.

CERAMIUM, *Rochei.* Derived from *keramion*, a pitcher; from the resemblance of the capsules. *Linn.* 24, Or. 7, Nat. Or. *Ceramidaceæ*. An extensive genus of seaweeds—*affine*, *arbascula*, *Borreri*, *corymbosum*, *cruciatum*, *Daviesii*, *diaphanum*, *d. pilosum*, *fasciculatum*, *floridulum*, *gracillimum*, *granulatum*, *Hookeri*, *interruptum*, *lanatum*, *lanuginosum*, *mesocarpum*, *patens*, *pedicellatum*, *pinnulatum*, *pluma*, *plumula*, *p. minor*, *polyspermum*, *pumilum*, *repens*, *roseum*, *Rothii*, *rubrum*, *seminudum*, *spinosum*, *spongiosum*, *tetragonum*, *tetricum*, *thujoides*, *tripinnatum*, *Turneri*, *versicolor*, *virgulatum*.

CERAMIACEÆ, or **ROSEFANGLES**, an order of sea-weeds of a rose or purple colour; many are valuable for food; and the Chinese bird's-nests are supposed to be a species of *Gelidium*.

The Carrageen Moss, and some others, are well known for their use in our own country.

CERANTHÆRA, *Beauvois.* From *keras*, a horn, and *anthera*, an anther; the lobes of the anthers being terminated by a bristle. *Linn.* 5, Or. 1, Nat. Or. *Violaceæ*. An ornamental genus of stove plants, growing about six feet high; they must be grown in sandy loam, and will increase by cuttings in sand, under a glass in heat.

- subintegrifolia White . . . 6, S. Ev. S. 6 Guinea 1824

CERANTHUS. See *Linociera*.

CERASINOUS, deep red, cherry-coloured.

CERASOPHORA. See *Cerasus*.

CERASTIUM, *Linn.* From *keras*, a horn; because many of the species have capsules like an ox's horn. *Linn.* 10, Or. 4, Nat. Or. *Alsiniaceæ*. A genus of little interest; they vary in height from half a foot to two feet high. Some of the herbaceous kinds have a pretty appearance on rock-work. Any light loamy soil suits them; seeds or suckers. *Synonymes*: 1, *C. collinum*. See *Larværa*.

CERATÁNDRA, Link & Otto. From <i>keras</i> , a horn, and <i>aner andros</i> , a man; form of united stamens. <i>Linn.</i> 20, Or. 1, Nat. Or. <i>Orchidæacæ</i> . See <i>Corygium</i> .				
CERATÓTLA, Michaux. From <i>keration</i> , a little horn; in allusion to the stigma having the appearance of a horn. <i>Linn.</i> 21, Or. 2, Nat. Or. <i>Eupetræacæ</i> . This is a very pretty greenhouse under-shrub, that should be grown in a sandy peat, and may be increased by cuttings potted in sand, under a glass.				
ericoides . Brown . . . 6, F. Ev. S. 1½ N. Amer. 1826				
CERÁTIUM, Albertini. From <i>keration</i> , a little horn; because the plants resemble small horns. <i>Linn.</i> 24, Or. 9, Nat. Or. <i>Botrytæacæ</i> . These are minute plants, generally found growing on				

dead wood in the form of little horns—*hydroides*.

CERATÓBIUM. See *Dendrobium*.

CERATOCÁRPUS, *Linn.* From *keras*, a horn, and *karpos*, fruit; in reference to the calyx being two-horned. *Linn.* 21, Or. 1, Nat. Or. *Chenopodiæacæ*. An uninteresting annual, only requiring to be sown in the open border—*arenarius*.

CERATOCÉPHALUS, *Maench.* From *keras*, a horn, and *kephale*, a head; on account of the end of the seeds in the heads of the capsules being horned. *Linn.* 5, Or. 6, Nat. Or. *Ranunculacæacæ*. A somewhat curious genus of plants, only requiring to be sown in the open border, and treated as other hardy annuals. *Synonyme*: 1, *Ranunculus falcatus*.

falcatus . Yellow . . . 5, H. A. ½ S. Eur. . 1739
orthoceras 1 Yellow . . . 5, H. A. ½ Caucasus. 1816

CERATOCÍLUS, *Lodd.* From *keras*, a horn, and *cheilos*, a lip; form of the labellum. A genus of orchids, divided from *Stanhopea*, and requiring similar treatment. *Synonyme*: 1, *Stanhopea insignis*. See *Stanhopea*.

grandiflorus . Purple . . . 7, S. Epi. 1 Trinidad 1824
insignis 1 . . . Purple . . . 7, S. Epi. 1 Trinidad 1826
oculatus . . . Yel. spot. . . 6, S. Epi. 1 Xalapa . 1829

CERATÓCHLOA, *Decandolle*. From *keras*, a horn, and *chloa*, grass; in reference to the seeds having three little horns. *Linn.* 3, Or. 2, Nat. Or. *Graminæacæ*. An uninteresting grass, requiring only to be sown in common soil. *Synonyme*: 1, *Festuca unioloides*—*unioloides* 1.

CERATODÁCTYLUS, *Smith.* From *keras*, a horn, and *dactylos*, a finger; division of fronds. *Linn.* 24, Or. 1, Nat. Or. *Polypodiæacæ*. A genus of tropical Ferns, requiring the same treatment as the stove species of *Aspidium*. *Synonyme*: 1, *Allosdrus Karwinksii*. *osmundioides* 1 Br. J. vol. 6, S. Her. P. 1 Mexico .

CERATÓNIA, *Linn.* From *keration*, a horn or pod; in allusion to the shape of the pods. *Linn.* 23, Or. 2, Nat. Or. *Fabacæacæ*. Scarcely worth cultivating, except for botanical collections; it grows to the height of fifteen feet, in a mixture of loam and peat; cuttings in sand will strike under a glass.

siliqua . . . Red yel. . . 9, G. Ev. T. 15 Levant . 1570

CERATOPÉTALUM, *Smith.* Derived from *keras*, a horn, and *petalon*, a petal; in reference to the form of the petals. *Linn.* 10, Or. 1, Nat. Or. *Cunoniæacæ*. A fine greenhouse plant, growing best in a sandy loam, and increased by cuttings in sand under a glass.

gummiiferum Pink . . . 6, G. Ev. T. 50 N. Holl. 1820

CERATOPHYLLACÆ, or HORNWORTS. Small herbs found in the ditches of temperate climates.

CERATOPHYLLUM, *Linn.* From *keras*, a horn, and *phyllon*, a leaf; the petals are cut so as to appear like a stag's horn. *Linn.* 21, Or. 9, Nat. Or. *Ceratophyllacæacæ*. Uninteresting water plants, thriving in any pond, and easily raised by seeds—*demersum*, *submersum*.

CERATOPHYLLUS, leaves like the upper part of a stag's horn.

CERATÓPTERIS, *Brongn.* From *keras*, a horn, and *ptéris*, a fern; horn-like form of divisions of fronds. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceæ*. See *Ellobocarpus oleraceus*.

CERATOSÁNTNES, *Jussieu*. From *keras*, a horn, and *anthos*, a flower; referring to the inner segments. *Linn.* 21, Or. 10, Nat. Or. *Cucurbitaceæ*. A climbing plant, of no beauty, growing in any common soil; increased by dividing the roots. *Synonymes*: 1, *Trichosánthes tuberósa*, *corniculáta*—*tuberósa* 1.

CERATOSPÉRMUM, *Persoon*. From *keras*, a horn, and *spermum*, a seed; form of seeds. *Linn.* 21, Or. 4, Nat. Or. *Chenopodiaceæ*. See *Diótis*.

CERATOSTÉMA, *Juss.* From *keras*, a horn, and *stema*, a stamen. The anthers are spurred. *Linn.* 10, Or. 4, Nat. Or. *Vacciniaceæ*. This is a genus of very pretty shrubs, requiring to be grown in sandy loam and peat, and may be readily increased by cuttings planted in sand, under a glass. *Synonyme*: 1, *C. grandiflora*.
grandiflora . . Red orange 5, G. Ev. S. 4 Peru . . 1846
longiflora 1 . . Crimson . . 5, G. Ev. S. 3 Peru . . 1846
hirsúta Scarlet . . . 5, G. Ev. S. 4 Peru . . 1846

CERATOSTÍGMA, *Bunge*. See *Valorádia plum-baginoides*.

CÉRBERA, *Linn.* Named from its poisonous qualities, in allusion to the dog Cerberus, whose bite was poisonous. *Linn.* 5, Or. 1, Nat. Or. *Apocynaceæ*. An ornamental genus of stove plants, succeeding well in a rich mould, and cuttings in sand root freely under a glass, in heat. The fruit of *C. ahouai* is a deadly poison. The Indians put small stones into the empty nuts, with which they ornament their legs; and the bark of *C. Odállam* is purgative. See *Tanghinia*, *Dissolèna*, *Och-ródia*. *Synonymes*: 1, *C. Mánghas*; 2, *C. Mánghas*; 3, *Tanghinia veneniflua*, *Ordeal tree of Madagascar*.

CÉRCIS, *Linn.* From *kerkis*, a shuttlecock; a name given to this tree by Theophrastus. *Linn.* 10, Or. 1, Nat. Or. *Fabaceæ*. This is a beautiful genus of ornamental trees, flowering early in spring, and looking very pretty planted singly on a lawn, or trained to a wall or trellis; they grow to the height of twenty feet, and prefer an open loamy soil: plentifully increased from seeds.

CERCOCÁRPUS, *De Candolle*. From *kerkos*, a shuttlecock, and *karpos*, a fruit; shape of fruit. *Linn.* 12, Or. 1, Nat. Or. *Rosaceæ*. A

genus deserving of cultivation. They grow freely in a mixture of loam, peat, and sand, and may be propagated by cuttings planted in sand, under a glass, in a gentle heat.

Fothergilloides Purple 5, G. Ev. S. Mexico . 1823

CERCÓDEA, *Lam.* See *Halorágis*.

CERCÓDIA, *De Candolle*. From *kerkos*, a tail, and *oidos*, like; shape of petals. *Linn.* 8, Or. 4, Nat. Or. *Haloragaceæ*. See *Halorágis*.

CERDANA. See *Córdia*.

CEREFÓLIUM. See *Anthriscus cerefolium*.

CERÉSIA, *Persoon*. From the goddess Ceres, the inventor of tillage. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. This is a very pretty grass, that requires to be grown in a greenhouse, and succeeds in any common soil; increased by seeds. *Synonymes*: 1, *Paspalum membranaceum*.

elegans 1. Apetal. 7, G. Her. P. 2 Peru . . 1816

CEREUS, *De Candolle*. From *cereus*, signifying pliant, like wax; referring to the shoots of some of the species being easily bent. *Linn.* 12, Or. 1, Nat. Or. *Cactaceæ*. A most beautiful genus, belonging to *Cactaceæ*; some of the species produce the most splendid flowers that are grown in our stoves; they succeed well in a sandy loam, the pots being well drained; in winter they require little or no water, but as soon as the flower-buds appear, they should have a good supply; increased by cuttings, which should be laid to dry a few days before being planted. See *Echinocactus*, *Opántia*, *Echinopsis*, *Epiphyllum*, *Lepismium*, *Rháspsalia*. *Synonymes*: 1, *Cactus abnormis*; 2, *C. Æthiops*; 3, *Cactus eburneus*; 4, *Cactus squamatus*; 5, *Cactus gibbosus*; 6, *Cactus Hystrix*; 7, *Cactus múltiplex*, *Echinocactus múltiplex*; 8, *Cactus Napoleónis*, *Cereus triangularis major*; 9, *Cactus redactus*; 10, *Cactus ovatus*; 11, *Cactus Pilajaya*, *C. undulatus*, *C. variabilis*; 12, *Cactus polymorphus*; 13, *Cactus speciosissimus*; 14, *Epiphyllum splendendum*, *E. Hitcheni*.

CEROTOPTERIS. See *Ellobocarpus*.

CERÖXYLON, or Wax Palm. See *Iriärtia*.

CERRUS. See *Quercus austriaca*.

CÉRRIS, ancient name for the bitter oak. (*Quercus Cérris*.)

CERVÁRIA. See *Athamánta Cervária*, and *Pseudamantia Cervária*.

CERVICÁRIA. See *Campanula*.

CERVICINA. See *Wahlenbergia*.

CERVINOUS, tawny, deer-coloured.

CESTRÁCEÆ. See *Solanæcæ*.

CESTRINUS, *Cassini*. After Cestrinus the son of Helenus and Andromache. *Linn.* 19. Or. 1, Nat. Or. *Asteræcæ*. An ornamental herbaceous plant, growing well in common soil, and is increased freely by dividing the roots. *Synonymes*: 1, *Serrátula acacúlis*, *Cýnara acacúlis*.

canthamoides 1. Purple 7, H. Her. P. 1 Barbary 1797

CÉSTRUM, *Linn.* The Greek name for *betony*, but it has no relation to the plant which now bears that name. *Linn.* 5, Or. 1, Nat. Or. *Solanæcæ*. This is a genus of little beauty, and of easy culture; all the species grow well in a mixture of peat and loam, and are increased by cuttings; the fruit of all the species is poisonous. See *Habrothamnus*. *Synonymes*: 1, *Habrothamnus aurantiacus*; 2, *calycinum*.

CÉTERACH, *Willd.* Called chetherak by the Persians. *Linn.* 24, Or. 1, Nat. Or. *Polypodiæcæ*. Plants of easy culture, found wild on limestone and chalk rocks, in Britain. *Synonymes*: 1, *Asplénium Céterach*, *Grammitis Céterach*.

officinárum. Brown 5, H. Her. P. 4 Britain, ch. rocks.

CETRÁRIA, *Acharius*. From *cebra*, a buckler; in reference to the receptacle being buckler-shaped. *Linn.* 24, Or. 8, Nat. Or. *Parme-*

hiacæ. Is a genus of lichens; some of the species are used for food in Iceland and Lapland. *C. islandica* and *nivalis*, are used as tonic, demulcent, and nutrient—*glauca*, *g. fállax*, *islandica*, *juniperina*, *j. Pinástri*, *nivalis*, *sepincola*.

CEUTHÓSPORA, *Fries*. From *keutho*, to hide, and *spora*, a sporule; in allusion to the sporules being hidden. *Linn.* 24, Or. 9, Nat. Or. *Uredinæcæ*. A genus of very minute fungi, found on decaying holly, laurel, and other leaves—*Lauri*, *phacidioides*, *phæocomes*.

CEYLONESE COW PLANT. See *Gymnema lactifera*.

CHABRÆA, *De Candolle*. Named in compliment to Donnicus Chabrey, of Geneva, author of a work entitled, "Omnium Striptium Sciographia," 1666. *Linn.* 19, Or. 1, Nat. Or. *Asteræcæ*. This plant thrives in any good soil, and is readily increased by seeds. *Synonymes*: 1, *Leuchèria runcinàta*, *Perdicium roseum*, *Lactostichia rosea*.

runcinàta 1. White . 6, H. Her. P. 1 1/2 Chili . 1844

CHADARA. See *Grèvia*.

CHENÁNTHE, *Lindley*. Not explained. *Linn.* 20, Or. 1, Nat. Or. *Orchidæcæ*. This is described as a most singular plant, but no figure of it has yet appeared. It will most probably be found to succeed best when treated as is recommended for the genus *Vanda*.

Barkeri . S. Epl. Para . 1837

CHÆNANTHÈRA. See *Charianthus*.

CHÆNÉSTHES, *Miers*. From *chaino*, to gape—cloven form of the calyx. *Linn.* 5, Or. 1, Nat. Or. *Solanæcæ*. Beautiful half-hardy shrubs, with showy flowers, increased readily from cuttings. *Synonymes*: 1, *Lycium fuchsoides*.

fuchsoides 1 . Scarlet 7, F. Ev. S. 6 Azoques . 1843

lancoolata . Blue . 6, H. Ev. S. 5 Quindiu . 1846

CHÆNOMELES. See *Cydonia*.

CHÆNÓSTOMA, *Beutham*. From *chaino*, to gape, and *stoma*, a mouth, referring to the wide throat of the corolla. *Linn.* 14, Or. 2, Nat. Or. *Scrophulariæcæ*. Pretty dwarf half-hardy plants, suitable for decorating the flower-garden, &c., in summer. They flourish under the treatment ordinarily bestowed upon plants of their class. *Synonymes*: 1, *Manúlea cordata*; 2, *M. fetida*; 3, *Manúlea hispida*, *M. oppositifolia*; 4, *M. linifolia*, *C. fasciculata*; 5, *M. villosa*.

cordata 1 . White . 6, G. Her. P. 1 C. G. H. . 1816

fastigiata . White . 6, G. Ev. S. 1 C. G. H. .

fetida 2 . White . 6, G. A. 1 C. G. H. . 1794

hispida 3 . White . 7, G. Her. P. 1 C. G. H. . 1816

strigosa . . Rose pr. 9, S. Ev. S. 1 W. Ind. . 1848
- CHÆTÓMIUM, Kunze.** Named from *chaite*, a bristle; in allusion to the hairy appearance of the plants. *Linn.* 24, Or. 9, Nat. Or. *Helvoliaceæ*. This is a minute species of *Fungus*, found growing on damp straw, &c.—*clatum.*
- CHÆTONÝCHIA, De Candolle.** *Linn.* 5, Or. 1, Nat. Or. *Ulecebraceæ*. See *Mlecebrum*.
- CHÆTÓPHORA, Agardh.** From *chaite*, a bristle, and *phorea*, to bear; the filaments being terminated by a bristle-like point. *Linn.* 24, Or. 7, Nat. Or. *Confervaceæ*. This is a curious genus of *Algae*, found growing on marine rocks, in lakes, ditches, &c. *Synonyme* : 1, *C. elegans—Berkeleya, endiviæfolia, c. crassa, longæva, pellita, pisiformis* 1, *tuberculosa.*
- CHÆTÓSPORA, R. Brown.** From *chaite*, a bristle or awn, and *spora*, a seed. *Linn.* 3, Or. 1, Nat. Or. *Cyperaceæ*. An uninteresting genus of grasses, that grow well in a boggy situation; increased by dividing at the roots. *Synonyme* : 1, *Schœnus ferrugineus.*
turbinata . . Petal 7, G. Grass . ¼ N. Holland 1820
ferruginea 1.
- CHÆTÓSPORA, Agardh.** See *Naccaria*.
- CHÆTÓSTACHYS.** See *Lavandula*.
- CHÆTÚRUS, Link.** From *chaite*, a bristle, and *oura*, a tail; in reference to the silky appearance of the panicles. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. An uninteresting grass, that grows in any common soil—*fasciculatus.*
- CHAFF-FLOWER.** See *Alternanthera Achyrantha*.
- CHAFFY,** bearing processes like chaff.
- CHAILLÉTIA, De Candolle.** In honour of M. Chailet, a Swiss botanist. *Linn.* 5, Or. 1, Nat. Or. *Chaillètiaceæ*. A poisonous greenhouse shrub, that grows about five feet high, succeeding well in a mixture of peat and loam, and increased by cuttings potted in sand, under a glass.
toxicaria . White . 6, G. Ev. S. 5 S. Leone . 1824
- CHAILLETIACEÆ** or **CHAILLETIADS.** A small order of trees and shrubs. *C. toxicaria* is known in Sierra Leone as Rats'-bane, and is reputed very poisonous.
- CHAINLET.** See *Calenella opuntia*.
- CHAITÚRUS.** See *Lconurus*.

- CHARLWOODIA**, *Sweet*. In honour of G. Charlwood, F.L.S., an enthusiastic English botanist. *Linn.* 6, Or. 1, Nat. Or. *Liliaceæ*. This is a beautiful stove genus, that attains the height of ten feet; the species thrive well in a mixture of peat and loam, and are increased by cuttings in sand, under a glass, in heat. *Synonymes*: 1, *Dracena australis*; 2, *D. indivisa*; 3, *D. stricta*. See *Cordylone*. australis 1. Blue wht. 3, S. Ev. T. 10 N. Zeal. 1823 congesta 2. Pa. blue 3, S. Ev. T. 10 N. Holl. 1822 indivisa 2. Blue 3, S. Ev. T. 10 N. Zeal. stricta 3. Blue 3, S. Ev. T. 10 N. Zeal. 1820
- CHARRAH**. See *Lagenaria vulgaris*.
- CHARRIED**, blackened by fire.
- CHASCONIUM**, *Mey*. Derived from *chasko*, to gape; in allusion to the gaping calyx. *Linn.* 14, Or. 2, Nat. Or. *Verbenaceæ*. A half shrubby greenhouse plant, thriving in loam and heath mould, but requires good drainage. It is easily propagated by cuttings planted in pots of sand, and placed in a little heat. cuneifolium. White. 5, G. Ev. S. 1 C. G. H. 1821
- CHASMONE**. See *Moluccella*.
- CHASMÓNIA**, *Presb*. From *chasmao*, to gape wide; in reference to the calyx being spread open. *Linn.* 14, Or. 1, Nat. Or. *Lamiaceæ*. An ornamental annual, that only requires sowing in common soil. *Synonyme*: 1, *Moluccella spinosa*. incisa 1. Pink. 7, H. A. 2 Levant 1596
- CHASTENÆA**, *De Candolle*. Named in honour of Victorina de Chastenay, a celebrated botanical painter. *Linn.* 10, Or. 1, Nat. Or. *Melastomaceæ*. Shrubs with the habit of *Meriania*, and requiring similar treatment; they are propagated by half ripened cuttings planted in soil, under a glass, in heat. Merianie. Purple. 5, S. Ev. S. 6 S. Amer.
- CHASTE TREE**. See *Vitex*.

CHEIRANTHODÉNDRON. See *Cheirostemon*.

CHEIRI. See *Cheiranthus Cheiri*.

CHEIRÍNIA. See *Erysimum*.

CHEIRISANTHÈRA. See *Cheiranthèra*.

CHEIROSTÉMON, *Humboldt et Bonpland*. From *cheir*, the hand, and *stemon*, a stamen; on account of their having five stamens, and the filaments united at the base. *Linn.* 16, Or. 5, Nat. Or. *Sterculiæceæ*. This is generally called the hand plant, on account of its five curved anthers which resemble the human hand; it will grow about one hundred feet high, and cuttings with their leaves entire, potted in peaty soil, plunged in heat, root freely.

plantanoides . Red pur. 5, S. Ev. T. 100 N. Spain 1801

CHEIRÓSTYLIS, *Linn.* From *cheir*, the hand, and *stylos*, a style. *Linn.* 20, Or. 1, Nat. Or. *Orchidæceæ*. "This interesting, but inconspicuous genus, was obtained by Messrs. Loddiges, from Ceylon." In general aspect it is like a minute *Goodyera*, but differs from that genus in several particulars. A very damp heat is requisite for these little gems—their treatment is the same as for *Anæctochilus*. *Synonyme*: 1, *Dossinia marmorata*, *Anæctochilus Lévii*.

marmorata 1. White . . . 6, S. Ter. ¼ Java . . . 1849
parvifolia . White . . . 6, S. Ter. ¼ Ceylon . . . 1837

CHELIDONIUM, *Linn.* The plant is said to flower at the arrival and dry up at the departure of the swallows; whence the name, from *chelon*, a swallow. *Linn.* 13, Or. 1, Nat. Or. *Papaveræceæ*. The species of this genus are interesting, and succeed well in common garden soil. *Synonyme*: 1, *C. dahuricum*. See *Roméria*.

CHEMMAM. See *Cucumis Dudaim*.

CHENOLEA, *Linn.* Supposed to be derived from *chen*, a goose, and *leia*, prey. *Linn.* 5, Or. 1, Nat. Or. *Chenopodiæceæ*. The beauty of this plant consists in its silvery leaves; its height is seldom more than one foot, and any rich light soil will suit it; cuttings root freely in a glass.

diffusa . . . Green. . 8 G. Ev. S. 1 C. G. H. . 1758

CHENOPODA. See *Aspalathus Chenopoda*.

CHENOPODIÆCÆ, or Chenopods. Principally weeds inhabiting waste places in all parts of the world; some, as beet-root, spinach, &c., are used as pot-herbs and vegetables.

CHENOPODIUM, *Linn.* From *chen*, a goose, and *pous*, a foot; in reference to many of the species having leaves similar to the webbed feet of the goose. *Linn.* 5, Or. 2, Nat. Or. *Chenopodiæceæ*. A genus of so little beauty, that its species are for the greatest part only grown in botanical collections; when grown they require to be sown on a sandy soil in the open border. *Synonymes*: 1, *Salsola frutescens*; 2, *S. divergens*; 3, *C. erodum*; 4, *Salsola salsa*; 5, *C. fetidum*; 6, *Salsola salsa*; 7, *C. leucospermum*. - CHILOPHYLLUM,** *De Candolle*. *Chilios*, very numerous, *phyllon*, a leaf. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. Plants with but little beauty, growing in light loam and heath mould, and propagated by division and seeds.
- globosum Yellow 8, G. Her. P. $\frac{1}{2}$ Mexico . 1820
- CHILI PEPPER.** See *Capsicum micranthum*.
- CHILÓCHLOA,** *Beauvois*. Derived from *chilos*, fodder, and *chloa*, grass. *Linn.* 3, Or. 2, Nat. Or. *Graminææ*. A genus of grasses of no particular beauty, that only require to be sown in the open ground. *Synonymes*: 1, *Phleum ænnum*; 2, *P. arenaria*; 3, *P. paniculatum*; 4, *P. Bæhmeri*—*ænnua* 1, *arenaria* 2, *aspera* 3, *Bæhmeri* 4, *cuspidata*.
- CHILÓDIA,** *R. Brown*. From *cheilos*, a lip, and *odous*, a tooth; alluding to the lip being toothed. *Linn.* 14, Or. 1, Nat. Or. *Lamiææ*. The species of this genus are ornamental greenhouse shrubs, that succeed well in a mixture of peat and loam, and increase by cuttings potted in sand, under a glass.
- australis Violet . 7, G. Ev. S. 3 N. Holl.
scutellarioides Violet . 9, G. Ev. S. 2 N. Holl. 1820
- CHILOGLÓTTIS,** *R. Brown*. From *cheilos*, a lip, and *glotta*, a tongue; alluding to the tongue-like appendage to the lip. *Linn.* 20, Or. 1, Nat. Or. *Orchidææ*. An ornamental bulbous-rooted plant, growing well in a mixture of light turfy loam, turfy peat, and sand; and kept either in the greenhouse or in a frame.
- diphýlla Red . . 5 F. Ter. $\frac{1}{2}$ New Hol. .
- CHILÓPSIS,** *D. Don*. From *cheilos*, a lip, and *opsis*, resemblance; calyx with a lip. *Linn.* 14, Or. 2, Nat. Or. *Bignoniææ*. For culture, &c., refer to *Bignonia*. *Synonymes*: 1, *Bignonia linearis*, *Chilopsis saligna*.
- linearis 1 Rose . 5, S. Ev. S. 20 Mexico . . 1825
- CHIMÁPHILA,** *Pursh*. From *cheima*, winter, and *phileo*, to love; the plants are green in winter. *Linn.* 10, Or. 1, Nat. Or. *Pyrolææ*. This is a genus of ornamental and medicinal plants, but difficult of cultivation; they succeed best planted out in peat soil, and there left to remain, as they cannot bear to be disturbed; cuttings. *Synonymes*: 1, *Pyrola umbellata*; 2, *P. maculata*.
- corymbosa 1 Pink . 6, H. Her. P. $\frac{1}{2}$ N. Amer. 1752
maculata 2 White . 6, H. Her. P. $\frac{1}{2}$ N. Amer. 1752
- CHIMÁZA.** See *Chimaphila*.
- CHIMONÁNTHUS,** *Lindley*. From *cheimon*, winter, and *anthos*, a flower; alluding to the time of its flowering. *Linn.* 12, Or. 3, Nat. Or. *Calycanthææ*. This genus is deserving of a place in all collections, on account of the delightful fragrance of the flowers; they endure our winters in the open air, but when grown in the conservatory are seen to the most advantage, as the flowers are liable to be injured when unprotected. They will grow in any soil, but prefer a mixture of loam and peat; and are increased by layers or young cuttings potted in sand, under a glass, and plunged in a little heat. *Synonyme*: 1, *Calycanthus præcox*.

CHLORANTHACEÆ. A small order consisting of herbaceous plants or under-shrubs, with an aromatic taste, and inconspicuous flowers. They are all natives of tropical climates; where they are esteemed for their medicinal properties.

CHLORÁNTHUS, Swartz. The flowers are green; whence the name, from *chloros*, green, and *anthos*, a flower. *Linn.* 1, Or. 1, Nat. Or. *Chloranthaceæ*. This is a very curious genus of plants, generally growing a foot, or a foot and a half high. They thrive well in a mixture of loam and peat, and cuttings root freely in peat under a glass.

orchidastrum . White . 6, S. Her. P. 2 S. Leone 1822
- CHLOROSIS,** the green sickness; a disease so called.
- CHLORXYLON,** *De Candolle*. From *chloros*, green, and *xylon*, wood; on account of the green or deep yellow colour of the wood. *Linn.* 10, Or. 1, Nat. Or. *Cedrelaceæ*. This is a fine timber tree, growing to the height of one hundred feet; it grows well in our stoves, in a mixture of loam and peat; increase is by cuttings. *Synonyme*: 1, *Swietenia chloroxylon*. See also *Laurus Chloroxylon*.
Swietenia 1 . White . 5, S. Ev. T. 100 E. Ind. 1820
- CHOCOLATE-NUT.** See *Theobroma*.
- CHOÏSA,** *Kunth*. In honour of M. Choisy, a Genevese botanist. *Linn.* 10, Or. 1, Nat. Or. *Rutaceæ*. This is an ornamental shrub, growing about six feet high; it thrives well in a mixture of peat and loam, and may be increased by cuttings in sand under a glass.
ternata . . . White . 7, S. Ev. S. 6 Mexico . 1825
- CHOKE.** See *Cerasus hymætilis*.
- CHOKO.** See *Séchium*.
- CHOMÉLIA,** *Jacquîn*. After J. B. Chomel, M. D., physician to Louis XV. *Linn.* 4, Or. 1, Nat. Or. *Cinchonaceæ*. The species are ornamental plants, growing from five to twelve feet in height; they thrive well in a mixture of loam and peat, and cuttings root freely under a glass in heat. *Synonymes*: 1, *Ixora fasciculata*; 2, *I. spinosa*.
fasciculata 1 . White . 5, S. Ev. S. 6 W. Ind. . 1825
spinosa 2 . . . White . 5, S. Ev. S. 10 W. Ind. . 1793
- CHOMORO.** See *Podocarpus cupressinus*
- CHONA.** See *Erica*.
- CHONDRIA,** *Agardh*. From *chondros*, a cartilage; on account of the fronds being cartilaginous. *Linn.* 24, Or. 7, Nat. Or. *Ceramideæ*. A very curious genus. All the species are found growing in the ocean. See *Sphaerococcus*—*angusta*, *articulata*, *clavellosa*, *dasyphylla*, *kalfornis*, *obtusâ*, *ovâlis*, *osmunda*, *pinnatifida*, *tenuissima*.
- CHONDRILLA,** *Linn.* From *chondros*, a lump; the plants bear lumps of gummy matter on the stems. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. Uninteresting plants; the species grow best planted in a sandy soil, and are increased by dividing the roots—*graminea*, *jûncea*, *latifolia*.
- CHONDROBYNCHA,** *Linn.* From *chondros*, a car-
- tilage, and *rhynchos*, a snout; form of lip of flower. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. Bulbless epiphytes, requiring the same treatment as *Epidendrum*.
rosea . . . Blush . 7, S. Epi. 2 Morida . . 1842
- CHONDROSITUM,** *Kunth*. From *chondros*, a lump; mode of plant's growth. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. *Synonymes*: 1, *Actinobolus procumbens*, *Atheropogon procumbens*; 2, *Actinobolus prostrata*, *Bouletoua prostrata*—*procumbens* 1, *prostratum* 2, *tenuis*.
- CHONDROSPERMUM,** *Wall.* From *chondros*, a lump, and *sperma*, a seed. *Linn.* 2, Or. 1, Nat. Or. *Oleaceæ*. A rambling evergreen climbing shrub, with large leaves, and inconspicuous greenish-yellow flowers. It requires the same treatment as for *Chionanthus*. *Synonymes*: 1, *Chionanthus smilacifolia*, *Ligustrum laurifolium*.
smilacifolium . Gr. yel. 7, S. Ev. Cl. 10 E. Ind. 1850
- CHONDRUS.** See *Polymorpha*.
- CHONEMORPHA,** *Don.* From *chone*, a funnel, and *morpha*, form; shape of flowers. *Linn.* 5, Or. 1, Nat. Or. *Apocynaceæ*. For culture, &c., see *Echites*.
pubescens . . . White . 5, S. Ev. S. 6 E. Indies 1822
- CHOOPA.** See *Pierardia dulcis*.
- CHORDARIA,** *Link.* Named on account of the resemblance of the plants to a cord, from *chordea*, a cord. *Linn.* 24, Or. 7, Nat. Or. *Fucaceæ*. A very remarkable genus, found growing in the ocean—*flagelliformis*.
- CHORDA-FILUM** or **SEA WHIPLASH.** See *Chordaria*.
- CHORDORHIZA,** cord-rooted.
- CHORËTIS,** *Herbert.* From *choretis*, rustic. *Linn.* 6, Or. 1, Nat. Or. *Amaryllidaceæ*. "This is a very beautiful bulbous-rooted plant, with a flower greatly resembling that of *Ismène*, from which genus *Chorëtis* has been lately divided by the Hon. and Rev. W. Herbert. *C. glauca* is a native of Mexico, whence it was imported by Geo. Barker, Esq., of Springfield, near Birmingham."
glauca . . . White . 8, S. Bl. P. 1 Mexico . 1837
- CHORISMA,** *D. Don.* *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. *Synonymes*: *Prenanthes repens*, *Chorisia repens*.
repens . . . Blue . 8, H. Her. P. Siberia . 1828
- CHORISFORA,** *De Candolle.* From *choris*, separately, and *spora*, a seed; the seeds are separated from each other in the pods. *Linn.* 15, Nat. Or. *Brassicaceæ*. The species of this genus are pretty, and only require sowing in the open ground, and treating like other hardy annuals. *Synonymes*: 1, *Raphanus tenellus*; 2, *R. arcuatus*.
tenella 1 . . . Purple . 6, H. A. $\frac{1}{2}$ Siberia . 1780
arcuata 2 . . . Purple . 6, H. A. $\frac{1}{2}$ Siberia .
- iberica*, *sibirica*.
- CHORÓZEMA.** From *choros*, a dance, and *zema*, a drink; this name was suggested to Labillardiere, who originally discovered the plants upon the south-west coast of New Holland, at the foot of the mountains, near a spot, where, after finding many salt springs, his party met

with an ample supply of fresh water. *Linn.* 10, Or. 1, Nat. Or. *Fabæceæ*. This is a very pretty genus, and *C. Henchmänni* is really beautiful; they grow from one to two feet high, and succeed best in an equal mixture of peat, loam, and sand, and increase from cuttings, but the best plants are obtained from seed, which ripen in abundance. *Synonymes*: 1, *Dillwynia glycinifolia*; 2, *C. flava*; 3, *Mirbèlia Båxteri*; 4, *C. latifolium, elegans*. See *Podolobium, Davidsia, Gastrolobium, and Oxyllobium*.

CHRODLEPUS, Agarh. From *chroos*, skin, and *lepo*, to decorticate; in allusion to the change undergone by the inner membrane, which becomes powdery. *Linn.* 24, Or. 7, Nat. Or. *Confervæceæ*. This curious genus is found growing on rocks, trees, and old walls—*Arnôtii, ebèneus, jôlithus, lichenicola, mesômelus, odoratus, rubicundus*.

CHRYSALIS-LIKE, like the chrysalis of an insect.

CHRYSANTHELLUM, Richard. A diminutive of

Chrysanthemum. *Linn.* 19, Or. 2, Nat. Or. *Asteræceæ*. An uninteresting stove annual,

that will grow well sown in any common soil.

Synonyme: 1, *Verbesina mûtica, Collæa procumbens*—*procumbens* 1.

CHRYSANTHEMUM, Linn. From *chrysos*, gold, and *antheon*, a flower; alluding to the colour of some of the flowers being yellow. *Linn.* 19, Or. 2, Nat. Or. *Asteræceæ*. The species and varieties of this genus are very numerous and of great beauty, when a large quantity of them are grown together; the greenhouse species thrive well in any light soil, and young cuttings root freely taken off young, and potted in sand under a glass. *Synonyme*: 1, *C. indicum*; 2, *C. tricolor, Ismèlia versicolor*.

Garden varieties.—These are too numerous to admit of even a selection, and many of them are exceedingly beautiful.

CHRYSÆIS, Lindley. After *Chryseis*, a celebrated Homeric beauty; alluding to the colour of the flowers. *Linn.* 13, Or. 2, Nat. Or. *Papavæceæ*. The species of this genus are very handsome when in flower, and on that account well deserve a place in every flower-garden. They succeed well in any rich soil, and must be annually raised from seed sown on a gentle hotbed early in spring, and afterwards planted out in the open border, where they will produce their flowers and seeds in autumn. If there is any convenience for protecting the young plants during winter, the seed should be sown in autumn, as by that means the plants will flower much earlier and produce seeds with greater certainty. *Synonymes*: 1, *Echscholtzia californica*; 2, *E. crœca*; 3, *E. fumaricæfolia*; 4, *E. tenuifolia*.

californica 1 . Yellow 9, H. Tu. P. 1 California . 1826

compacta . Yellow 8, H. Tu. P. 1 California . 1833

crœca 2 . Saffron 8, H. Tu. P. 1 California . 1833

fumaricæfolia 3 Yellow 9, H. Tu. P. 1 Mexico . 1827

tenuifolia 4 . Yellow 8, H. Tu. P. 1 California . 1855

CHRYSÆIS, Lees. See *Amberbda*.

CHRYSIPHALA. From *chrysos*, gold, and *phiale*, a goblet; in allusion to the golden cup-like flowers. *Linn.* 6, Or. 1, Nat. Or. *Amaryllidæceæ*. This is a pretty genus of bulbs, that require to be grown in a light loam, and are increased by offsets. *Synonyme*: 1, *Stenomesson flava*. See *Coburgia*.

crœca . . . Copper 5, G. Bu. P. 1 S. Amer. . 1820

curvidentata . Yellow 10, G. Bu. P. 1 Peru . 1825

flava 1 . . . Orange 5, G. Bu. P. 1 Peru . 1820

pauciflora . . . Orange 5, G. Bu. P. 1 Peru . 1822

CHRYSIS. See *Helianthus*.

CHRYSOBACTRON, Colenso. From *chrysos*, gold,

and *baktron*, a staff. Flowers rich yellow. *Linn.* 6, Or. 1, Nat. Or. *Liliaceæ*. The species are natives of boggy places, and the pot in which the plant grows should stand half immersed in water. Increase is by division.

Hookeri . . Yellow 5, G. Her. P. 1 N. Zealand 1848

CHRYSOBALANACEÆ. Trees and shrubs found principally in the tropical regions of Africa and America. Many bear eatable fruit, much esteemed in the countries where they grow.

CHRYSOBALANUS, *Linn.* From *chrysos*, gold, and *balamos*, an acorn; some of the species bear yellow fruit. *Linn.* 12, Or. 1, Nat. Or. *Chrysobalanaceæ*. A genus of fruiting shrubs, succeeding best when grown in a mixture of loam and peat; increased by layers or cuttings in sand, under a glass. In the W. Indies the fruit of *C. Icaco* is eaten, under the name of cocoa-plum.

Icaco . . . White S. Ev. S. 10 W. Indies . 1752
oblongifolius . White 5, G. Ev. S. 4 Georgia . 1812

CHRYSOBÄPHUS. See *Anæctochilus*.

CHRYSOBOTRYA. See *Ribes caucasicum*, *tenatiflorum*, and *flavum*.

CHRYSOCÄLYX. See *Crotalaria*.

CHRYSOCÉPHALUM, *Walp.* From *chrysos*, gold, and *kephale*, a head. Flowers. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. Plants with the habit of *Helichrysum*, and requiring the same treatment.

arenarium . Yellow 5, H. Her. P. 1½ Australia .

CHRYSOCOMA, *De Candolle.* From *chrysos*, gold, and *kome*, hair; the stems are terminated by tufts of yellow flowers. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. This is an ornamental genus of plants, the species growing from half a foot to six feet high; they succeed best in a mixture of loam and peat, and cuttings taken off when ripe, root freely under a glass. See *Euthamia*, *Ozothamnus*.

biflora . . . Blue . 8, H. Her. P. 3 Siberia . 1741

villösa . . . Yellow 8, H. Her. P. 1 Hungary . 1799

virgata . . . Yellow 9, H. Her. P. 1 N. Amer. . 1821

CHRYSOGONUM, *Linn.* From *chrysos*, gold, and *gonu*, a knee or joint; the flowers are generally produced at the joints of the stem. *Linn.* 19, Or. 4, Nat. Or. *Asteraceæ*. This is a very pretty herbaceous plant, that thrives best in peat and loam, and is increased by dividing the roots. See *Leontice Chrysogonum*.

virginianum . Yellow 5, H. Her. P. ½ N. Amer.

CHRYSOPHYLLUM, *Linn.* From *chrysos*, gold, and *phyllon*, a leaf; in allusion to the under surface of the leaves being covered with dense shining hairs of a bright yellow colour. *Linn.* 5, Or. 1, Nat. Or. *Sapotaceæ*. This is a fruit-bearing genus; the species grow from fifteen to fifty feet high, and one species, *C. macro-*

phyllum, attains the height of one hundred feet, with most splendid foliage; they do well in a mixture of loam and peat; and cuttings of the ripened wood root freely in sand under a glass, with a good moist heat. See *Bumelia*, and *Nycterisition*.

angustifolium . White . 5, S. Ev. T. 20 W. Ind. 1819

CHRYSOPHIALA. See *Cobúrghia incarnata*.

CHRYSOPÖGON, *Trinius.* From *chrysos*, gold, and *pogon*, a beard; in allusion to the yellow awns. *Linn.* 23, Or. 1, Nat. Or. *Graminaceæ*. An uninteresting grass, that only needs to be sown in any common soil. *Synonymes*: 1, *Andropogon grýllus*, *Hölcus grýllus*, *Poltánia grýllus*—*grýllus* 1.

CHRYSÖPSIS, *Don.* From *chrysos*, gold, and *opsis*, a face; yellow flowers. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. For culture, &c., see *Inula*.

trichophylla . Yellow 6, H. Her. P. N. Amer. 1827

CHRYSORHIZA. See *Morinda*.

CHRYSORRHÖE, *Lindley.* From *chrysos*, gold, colour of flowers, and *rheo*, to flow. *Linn.* 10, Or. 1, Nat. Or. *Chamaelaniaceæ*. For culture, &c., see *Mýrtus*. See *Verticordia*.

nites . . . Yellow . 5, G. Ev. S. Swan R. .

serrata . . . Yellow . 5, G. Ev. S. Swan R. . 1841

CHRYSOSPÉNIMUM, *Linn.* From *chrysos*, gold, and *splen*, the spleen; in reference to the colour of the flowers, and the supposed medicinal virtues of the plant. *Linn.* 10, Or. 2, Nat. Or. *Saxifragaceæ*. This is a curious and rather pretty genus; they require a moist situation. Our native species are found in the greatest perfection upon the banks of small rivulets; increased by dividing the roots.

alternifolium . Yellow 4, H. Her. P. ¼ Brit. w. sh. pl.

nepalense . . . Yellow 4, H. Her. P. ¼ Nepal . 1820

oppositifolium . Yellow 4, H. Her. P. ¼ Brit. w. sh. pl.

CHRYSOSTÉMMÄ, *Lessing.* From *chrysos*, gold, and *stemma*, a crown; alluding to the colour of the flowers. *Linn.* 19, Or. 3, Nat. Or. *Asteraceæ*. This very pretty species deserves to be cultivated in every flower-border. For culture and propagation see *Cereopsis*. *Synonymes*: 1, *Cereopsis tripteris*.

tripteris . . . Yellow . 3, H. Her. P. 6 N. Amer. 1837

CHRYSÖSTOMA. See *Mentzelia*.

CHRYSÖTHEMIS, *Don.* Named after Chrysothemis, daughter of Agamemnon. *Linn.* 14, Or. 2, Nat. Or. *Gesneraceæ*. A genus separated from *Besleria*. Culture is the same as for *Besleria* and *Gloxinia*. *Synonymes*: 1, *Besleria pulchella*; *B. melissæfolia*, *Alloplectus mellitifolia*.

aurantiaca . Yellow . 7, S. Her. P. 2 Antilles . 1849

venösa 1 . . . Yellow pur. 7, S. Her. P. 4 W. Ind. . 1830

CHRYSÖRUS, *Persoon.* From *chrysos*, gold, and *oura*, a tail; alluding to the compact heads of flowers. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*.

This is a genus of grasses, some of which are very ornamental; they only require to be sown in any common soil. *Synonymes*: 1, *C. cynosuroides*, *Cynosurus aureus*; 2, *Cynosurus elegans*. *effusus* . . . Apetal . 7, H. Grass 1 S. Europe 1824 *elegans* 2 . . . Apetal . 7, H. Grass 1 S. Europe 1816 *aureus* 1, *echinatus*.

CHU-LAN. See *Chloranthus elatior*.
CHUMBLEE. See *Jasminum grandiflorum*.
CHUQUIRAGA, De Candolle. *Linn.* 19, Or. 1, Nat. Or. *Asteraceae*. For culture, see *Bacázia*. *insignis* . . . Yellow . 5, G. Ev. S. 2 S. America 1824

CHURRAS. See *Cannabis sativa*.
CHUSSALONGA. See *Eupatorium glutinosum*.
CHYMOCARPUS, D. Don. From *chymos*, juice, and *carpos*, a seed-vessel; fruit juicy. *Linn.* 8, Or. 1, Nat. Or. *Tropaeolaceae*. See *Tropaeolum*.

CHYSIS, Lindley. From *chysis*, melting; because the pollen-masses are as it were fused together. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceae*. These are splendid and very rare species. In their native countries they are found growing suspended by long fibrous roots from the branches of trees, so that the pseudobulbs, which grow to a great length (and which are also very brittle), hang downwards, and wave in the wind. The flowers are very showy, the colours bright, the texture firm, and the surface even and waxy. The label-lums are beautifully marked. They succeed well with the treatment recommended for the genus *Vanda*. *Synonyme*: 1, *C. aurea* *Limminghi*.
aurea . . . Yel. crim. . 4, S. Epi. 1 Venezuela 1834
maculata . Y. p. sp. . 3, S. Epi. 1 Colombo . 1850

CHYTRACÛLIA. See *Calyptanthus Chytraculia*.
CIBARIOUS, good for food, esculent.

CIBOTIUM, Kaulfuss. From *kibotos*, a little chest; in reference to the form of the indusium. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceae*. *C. Billardièri* is a tree fern from N. Holland, where it grows to the height of thirty feet; it requires to be grown in a mixture of loam and peat, and is increased by dividing the roots. *Synonymes*: 1, *Aspidium Barometz*, *Cibotium glaucescens*, *C. glaucum*, *Polypodium Barometz*, *Nephrodium Barometz*; 2, *Dicksônia antarctica*.
Barometz 1. Bro. yel. . 5, S. Her. P. 2 China . 1824

princeps . . . Brown . 4, S. Her. P.
Schiedèl . . . Brown . 4, S. Her. P. 2 Mexico. 1846

CICCA, Linn. Supposed to be a man's name. *Linn.* 21, Or. 4, Nat. Or. *Euphorbiaceae*. It is a fruit-tree, growing to the height of twenty feet; it thrives best in sandy loam, and strong cuttings root freely if planted with their leaves on in sand, under a glass.
désicha . . . Green . 5, S. Ev. T. 20 E. Indies . 1796

CICELY. See *Cherophyllum*.
CICÉNDIA, Adanson. *Linn.* 4. Or. 1, Nat. Or. *Gentianaceae*. See *Exacum* and *Miscocèle*.
CICER, Tournefort. From *kykis*, force, or strength; in reference to its qualities. *Linn.*

17, Or. 4, Nat. Or. *Fabaceae*. This genus is cultivated in the south of Europe for the same purpose as the lentil in this country; it only requires to be sown in common soil, but it is too delicate for field culture in this country. See *Ervum*.

arietinum . . . Purple . 7, H. A. 1 S. Eur. . 1548
punctatum . . . Pu. wh. 7, H. A. 1 . 1830
songaricum . . . Blue . 7, H. A. 1 Persia . 1828

CICER. See *Astragalus Ciccr*.
CICHERIUM, Linn. The Greeks adopted this name from the Egyptians. *Linn.* 19, Or. 1, Nat. Or. *Asteraceae*. This is a genus of uninteresting plants, with the exception of *C. Endivia*, which is very valuable as a salad; the tender species should be sown on a hotbed, and afterwards transplanted.

Endivia . . . Blue . . 7, H. A. 2 E. Ind. 1548
Intybus . . . Blue . . 7, H. Her. P. 2 Brit. gravel
divaricatum, *pumilum*, *spinosum*.

CICÓNIUM, Sweet. From *ciconia*, a stork; same meaning as *Pelargonium*. *Linn.* 16, Or. 4, Nat. Or. *Geraniaceae*. See *Pelargonium*.

CICÛTA, Linn. A name of doubtful meaning, used by Pliny. *Linn.* 5, Or. 2, Nat. Or. *Apiaceae*. The species of this genus are of little interest, growing from one to three feet high; they delight in a humid situation, and are easily raised from seeds. The roots of *C. virida* are poisonous. See *Férula*.

maculata . . . White . 7, H. Her. P. 2 N. Amer. . 1759
virida . . . White . 7, H. Her. P. 3 Brit. ditches
bulbifera, *daurica*.

CIDER is the expressed juice of apples.

CILLE, hairs like those of the eyelash.

CILIARIA. See *Saxifraga*.

CILIARY, } eyelash-haired.

CILIATED, }

CILIARY-SCABROUS, having rough ciliated margins.

CILIATELY-TOOTHED, having teeth like the hairs of the eyelash.

CILIATELY-PLUMOSE, having long hairs on the edges, like the feathers of a quill.

CIMICÓFUGA, Linn. From *cimex*, a bug, and *fuga*, to drive away; referring to the virtues which the plants are supposed to possess. *Linn.* 13, Or. 5, Nat. Or. *Ranunculaceae*. A curious genus; the species grow from two to four feet high. They thrive well in any common soil, and are increased by seeds, or by dividing the roots. *Synonymes*: 1, *Actæa podocarpa*; 2, *a. cimicifuga*.

CINCHONA, Linn. In honour of the Countess de Cinchon, vice-queen of Peru, who was cured of a fever in 1638 by this remedy. *Linn.* 5, Or. 1, Nat. Or. *Cinchonaceae*. It is from this genus that the celebrated Peruvian bark is obtained; it is not common in collections, owing to its being rather difficult to keep. The best soil for it is loam and peat; and cuttings, if taken off when ripe, and planted in a pot of sand, under a glass, in heat, will strike. *Sy-*

nonyms: 1, *C. Condaminea, lancifolia, académica, Quinquina*. See *Hymenodictyon, Lucilia, Exostemma*.

CINCHONACEÆ. A large order, consisting of trees, shrubs, and herbs, natives of the hottest parts of the world. Some possess powerful medicinal properties, others produce eatable fruit, and others are used for food. All are interesting.

CINCLIDÖTUS, Beauvois. From *kigklis*, lattice, and *odus*, a tooth; the teeth of the peristome are united in parcels, in a peculiarly netted manner. *Linn.* 24, Or. 5, Nat. Or. *Bryaceæ*. A pretty genus, belonging to *Musci*, found growing in streams of fresh water. *Synonyme*: 1, *Fontinalis minor*—fontinaloides 1.

CINERARIA, Linn. From *cineres*, ashes; referring to the soft white down which covers the surfaces of the leaves. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. This is a pretty genus of plants, the species of which grow generally from one to three feet high; they thrive best in a mixture of loam and peat, and young cuttings root freely under a glass. See *Agathæa, Pericallis, Senecillis*, and *Senecio*. *Synonyms*: 1, *Senecio racemosus*; *C. ambigua, nebrodensis*; 2, *C. parviflora*; 3, *C. oivrensia*; 4, *C. integrifolia, longifolia*; 5, *Ligularia macrophylla*.

Garden varieties.—Of these there are a great number, amongst which may be mentioned, *Baronesse de Rothschild, Delicata, Delight, Duchesse de Brabant, Earl Clarendon, Emperor of French, Lady Camoys, Lord Palmerston, Magnum Bonum, Mrs. Hoyle, Optima, Prince Albert, Prince of Wales, Regalia, &c.*

CINERARIA. See *Arctotis Cineraria* and *Centaurea Cineraria*.

CINEREOUS, coloured like ashes, grey.

CINEREOUSLY-CANESCENT, between white and ash-coloured.

CINEREOUSLY-GLAUOUS, between sea-green and ash-coloured.

CINEREOUSLY-PUBESCENT, covered with grey pubescence.

CINGALESE, inhabitants of, or belonging to Ceylon.

CINNA, Linn. The ancient name of a grass growing in Cilicia. *Linn.* 1, Or. 2, Nat. Or. *Graminaceæ*. This is a curious grass, that succeeds well sown in any common soil. See *Trichochloa*.

arundinæa . . . Apetal 6, H. Grass 3 Canada . . 1799

CINNAMODÉNDRON. See *Canella axillaris*.

CINNAMÖMUM, R. Brown. Derived from the Arabic, *kinamon*, cinnamon. *Linn.* 9, Or. 1, Nat. Or. *Laurææ*. This is a genus of stove plants of considerable beauty, and some of them are highly valuable. It is from the inner bark of *C. verum* that the cinnamon of commerce is obtained; and *C. camphora* is the plant from which camphor is prepared. All the species succeed well in a mixture of loam and peat; and cuttings of the ripened wood root freely in sand under a glass. *Synonyms*: 1, *Laurus Beilgöta*; 2, *L. camphora*; 3, *L. cassia, L. cinnamömum*; 4, *L. Culilaban*; 5, *L. dulce, L. Burmanni*; 6, *L. glauca*; 7, *L. gracilis*; 8, *L. Malabättrum*; 9, *L. montana*; 10, *L. nitida*; 11, *L. cinnamömum, cassia*.

CIRCEÆCÆ. See *Onagræceæ*.

CIRCINAL, resembling a circle.

CIRCINATE, curled round like a sheep crook.

CIRCINATELY-REVOLUTE, curled round like a circle.

CIRRHÆA, *Lindley*. The part of the flower called the rostellum is prolonged in the form of a small tendril or *cirrhus*; hence the name. *Linn.* 20, Or. 1, Nat. Or. *Orchidæcææ*. This is an interesting genus of orchideous plants. The flowers of all the species are of a green or yellowish colour; and in some, the sepals and petals are beautifully spotted with rich orange. For culture and propagation see *Stanhopea*. *Synonymes*: 1, *Cymbidium dependens*; 2, *Gongora viridi-purpurea*; 3, *C. fiasco-lutea*.

CIRRHIFEROUS, bearing tendrils, or claspers.

CIRRHOPÉTALUM, *Lindley*. From *cirrhus*, a tendril, and *petalum*, a petal; in allusion to the form of the flowers, *Linn.* 20, Or. 1, Nat. Or. *Orchidæcææ*. *C. Thouarsii* is a most singular species, with long, strap-shaped sepals, growing from one side of the flowers, while the petals are very small, yellow, spotted finely with red. The rhizoma of this species elongates very much, and is in a growing state always at the extremity; on this account it is requisite, in potting, to keep the active part nearest the side of the pot from which it grows away. The other species have much smaller flowers, without anything striking about them. For culture, &c., they may be referred to *Stanhopea*. *Synonymes*: 1, *Epiphyrium ciliatum*; 2, *E. capitatum*; 3, *E. compressum*; 4, *E. elongatum*; 5, *Bolbophyllum longiflorum*, *Zygoglossum umbellatum*.

CISSAMPELOS, *Linn.* From *kissos*, ivy, and *ampelos*, a vine, having the character of the ivy in its rambling branches, and that of the vine, from the fruit being in racemes. *Linn.* 22, Or. 13, Nat. Or. *Menispermaceae*. This is a genus of beautiful stove climbers; the species thrive well in a sandy peat, and are increased by cuttings planted in sand, under a glass. See *Menispermum*.

Cissus, *Linn.* From the Greek, *kissos*, ivy; said also to come from the Arabic word, *gissos*, signifying the same plant. *Linn.* 4, Or. 1, Nat. Or. *Vitaceae*. This is a genus of climbers, some of the species of which are very ornamental; they are free growers, and delight in a light rich soil. Cuttings are easily rooted under a glass in a moist heat. See *Ampelopsis*.

Synonyme: 1, *C. heterophylla*.

adnata, alata, angustifolia, auriculata, carnosa, latifolia, microcarpa, orientalis, quinquefolia, repens, smilacina.

CISTACEAE, or **ROCK-ROSES**. A small order consisting of dwarf and trailing shrubs and herbaceous plants, mostly with showy, fugitive flowers. The resinous balsamic substance known as *Ladanum* is obtained from *Cistus* *Ledon*, *Creticus*, and others. All deserve cultivation.

Cistus, *Tournefort*. From the Greek, *kistos*, which is derived from *kiste*, meaning a box or capsule; on account of the remarkable shape of the capsule. *Linn.* 13, Or. 1, Nat. Or. *Cistaceae*. This is a beautiful genus of plants, varying in height from one to four feet; they are considered hardy, but some of them require protection in winter, either in a greenhouse or cold frame; most of the species, however, will pass the winter in the open ground, if the weather be not very severe; but the best plan is to keep some of all the sorts in pots, that they may be more easily protected from severe weather, when they may be turned out in the borders in spring, where they will flower freely. They do well in common soil, and are increased by layers, or ripened cuttings placed under a glass, or seeds. *Synonymes*: 1, *C. salvifolius*; 2, *C. ladaniferus*, *stenophyllus*; 3, *C. undulatus*; 4, *C. villosus*, *virescens*; 5, *C. ladaniferus*, *undulatus*; 6, *Génista fragrans*; 7, *C. symphitifolius*, *Bertholletianus*, *ochreatus*, *candidissimus*, *Rhodocistus leucophyllus*.

CISTUS LEDUM. See *Cistus ledon*.

CISTURAPES. See *Cytinaceæ*.

CITHARÉXYLUM, *Linn.* From *kithara*, a lyre, and *xylon*, wood, erroneously supposed to be applicable to making musical instruments; hence the name fiddle-wood. *Linn.* 14, Or. 2, Nat. Or. *Verbenaceæ*. An ornamental genus; the species vary in height from six to ten feet. They thrive best in a mixture of peat and loam, and cuttings root freely in sand, under a glass. *Synonyme*: 1, *C. erectum*.

CITRÖBATUS, *Cunningham*. Derived from *citros*, a citron, and *batus*, a thorn; in reference to the small orange-coloured fruit, which resembles an orange; hence it is called by the colonists orange thorn. *Linn.* 5, Or. 1, Nat. Or. *Pitosporeæ*. The species of this little-known genus will probably be found to succeed best in sandy peat, and a little loam, well mixed. The pots should be carefully drained.

CITRON. See *Citrus medica*.

CITRONÉLLA. See *Villarsia*.

CITRON FINGERED. See *Sarcodactylis*.

CITRÜLLUS. See *Cucumis Citrullus*.

CITRUS, *Linn.* This genus is said to have its

name from the town Citron, in Judea. *Linn.* 18, Or. 2, Nat. Or. *Aurantiaëæ*. This is an ornamental genus of fruit trees, growing from three to fifteen feet high; they thrive best in a good loamy soil, mixed with a quantity of rotten dung. They do not like much pot-room, nor too much water, when in a growing state. The different kinds are procured by budding or grafting on common stocks, which, as soon as operated upon, should be placed in some close frame, in a moderate dung heat. Stocks for working upon are raised from any oranges, lemons, &c. They are sometimes raised from cuttings, in which case they produce fruit when very small plants. See *Severinia*.

rosea . . . Rose . 8, S. Ter. . 1 Merida . . 1844

CLEMATIS, *Linn.* From *klema*, a vine branch; because most of the species climb like the vine. *Linn.* 13, Or. 6, Nat. Or. *Ranunculaceæ*. A numerous and highly ornamental genus of, for the most part, climbing plants. The greenhouse species are very desirable where climbers are wanted; they grow well in any light soil, or loam and peat; cuttings root freely under a glass. The same treatment is required for the stove kinds. The hardy kinds grow in any common garden soil, and are well adapted for trellis-work, or for training against a wall. They are readily increased by laying the young shoots in July or October. The herbaceous kinds are increased by dividing the plants at the root early in spring. *Synonymes*: 1, *C. calycina*; 2, *C. australis*; 3, *C. fragrans*; 4, *C. cespitosa*, *Flammula*; 5, *C. bicolor*; 6, *C. Forstëri*; 7, *C. nana*; 8, *C. integrifolia*; 9, *C. nepalensis*; 10, *C. anemoneiflora*; 11, *C. Garden varieties.—Of these there are a great number, and some are very beautiful.

CLEMATITIS. See *Aristolochia Clematidis*.

CLEOME, *Linn.* From *kleio*, to shut; alluding to the parts of the flower. *Linn.* 15, Nat. Or.

Capparidaceæ. The species of this genus are very pretty, and free-flowering; the stove kinds require a rich light soil, and cuttings root freely under a glass. Some of the annual species require sowing in a hotbed frame, or in a hothouse, and when potted off, to be placed among the tender annuals. The hardier kinds may be sown on a hotbed, and when of sufficient size, planted out in sheltered situations in the flower-borders. *Synonymes*: 1, *C. ornithopodioides*; 2, *C. aurea*, *Peritoma aurea*; 3, *C. spinosa*. See *Gynandropsis*, *Heliophila*, *Peritoma*, *Polanisia*, *Röthia*, and *Stanleya*.

CLEONIA, *Linn.* A Greek name, employed by Theophrastus. *Linn.* 14, Or. 1, Nat. Or.

Lamiaceæ. This pretty species merely requires sowing in the open border, and treating as other hardy annuals.

lusitanica. Li. blue . 6, H. A. 1 Portugal . 1710

CLERODENDRUM, *Linn.* *Kleros*, lot, and *dendron*, a tree; in allusion to the uncertain medicinal properties of the species. *Linn.* 14, Or. 2, Nat. Or. *Verbenaceæ*. A beautiful

genus, varying in height from three to eight feet; they succeed best in a rich soil, composed of loam, rotten dung, and sandy peat. Young cuttings root freely in sand or soil, under a glass. *C. speciosissimum* is the most splendid. *Synonymes*: 1, *Volcamèria buxifolia*; 2, *C. ovatum*, *V. madagascariense*; 3, *V. angustifolia*; 4, *Leucoscèptrum cænum*; 5, *Siphonanthus indica*; 6, *Volcamèria capitata*; 7, *V. dentata*; 8, *V. nervifolia*; 9, *C. squamatum*.

CLÉTHRA, *Linn.* From *kléthra*, the Greek name of the alder; on account of the resemblance it bears to that plant. *Linn.* 10, Or. 1, Nat. Or. *Ericæcæ*. All the species of this genus are ornamental, growing from two to ten feet high. The greenhouse kinds are well suited

for conservatories, succeeding best in peat earth, or light sandy loam; cuttings taken off, not too ripe, will root freely in sand, under a glass. The hardy kinds, where the soil will suit them, are well adapted for the front of shrubberies, and require the same kind of soil as the greenhouse species. It is usual to increase them by layers; but cuttings root readily in sand, under a glass. All the kinds may be raised from seeds. *Synonymes*: 1, *Cuellària ferruginea*; 2, *C. quercifolia*.

CLEYERA, *Thunberg.* In honour of Andrew Cleyer, M.D., a Dutch botanist, once resident at Batavia. *Linn.* 13, Or. 1, Nat. Or. *Ternstrômiæcæ*. An ornamental greenhouse plant, about five feet high; it grows well in sandy peat, and is increased by cuttings under a glass.

jâpônica . . . White . . . 4, G. Ev. S. 5 Japan . 1820

CLIANTHUS, *Solander.* From *kleios*, glory, and *anthos*, a flower; in reference to the noble appearance of the species of this genus. *Linn.* 17, Or. 4, Nat. Or. *Fabacæ*. Very elegant plants, resembling the *Sutherlandia frutescens* when in flower; they attain the height of eight or ten feet; and grow well in an equal mixture of loam, peat, and sand; they do best when planted in the border of the conservatory, and will also flourish against a south wall when protected from frost and cold; cuttings root in the kind of soil recommended for growing them when placed under a glass. *Synonymes*: 1, *Streblorhiza speciosa*; 2, *Donia punicea*; 3, *C. Oxleyi*, *Donia speciosa*, *Kennedyia speciosa*.

CLITORIA, *Linn.* From *clitoris*, an anatomical term; a resemblance to the configuration of which has been fancied to exist in the flower. *Linn.* 17, Or. 4, Nat. Or. *Fabaceæ*. The species of this genus are mostly climbers, with large elegant pea-flowers: they succeed best in a mixture of loam, peat, and sand; cuttings will root under a glass, in heat, but the best method of increasing them is by seed, which sometimes ripens in this country. The annual species requires the same treatment as other tender annuals. See *Barbieria*, *Colagania*, and *Vilmorinia*.

COB PINKS. See *Dianthus horténsis*.

COBRËSIA, Willdenow. Named after a German nobleman of the name of De Kobres, stated to have been a great promoter of botany and natural history. *Linn.* 21, Or. 3, Nat. Or. *Cyperàceæ*. These plants resemble *Càrex*, and having no ornamental appearance, are scarcely worth cultivation—*caricina*.

COBURGHIA, Herbert. In honour of Prince Leopold of Saxe-Coburgh, late King of Belgium. *Linn.* 6, Or. 1, Nat. Or. *Amaryllidàceæ*. Handsome species, requiring the same treatment as *Pancrátium*. *Synonymes*: 1, *Pancrátium incarnátum*; 2, *Clitánthus humilis, Chrysothala incarnáta*.

COBWEBBED, covered with loose hairs, as if with a cobweb.

COCA. See *Erythrocáylon*.

COCCOCYPSELUM, Swartz. From *kokkos*, fruit, and *kypselè*, a vase; alluding to the shape of the berries. *Linn.* 4, Or. 1, Nat. Or. *Cinchonàceæ*. An uninteresting stove herbaceous genus, growing in sandy loam, and multiplied by cuttings in sand, under a glass.—*cordifolium, repens*. See *Fernèdia*.

COCCOLÓBA, Linn. From *kokkos*, a berry, and *lobos*, a lobe; in allusion to the character of the fruit. *Linn.* 8, Or. 3, Nat. Or. *Polygonàceæ*. The Sea-side Grape is an ornamental genus, varying in height from fifteen to eighty feet; the species are remarkable for their large leaves. They grow well in a mixture of loam and peat, and cuttings of the ripened wood, taken off at a joint, will root freely under a glass, in sand; the leaves of the cuttings must not be shortened. See *Sarcogdnum*. *Synonymes*: 1, *C. macrantha*; 2, *C. parviflora*; 3, *Polygonum patycláda*.

COCULUS INDICUS. See *Cocculus*.

COCULUS, a kind of cell, which opens with elasticity.

COCULUS, *Decandolle*. Derived from *cocos*, the systematic name of the cochineal; given to this genus because most of the species bear scarlet berries. *Linn.* 22, Or. 6, Nat. Or. *Menispermaceae*. An interesting genus of plants, remarkable for their medicinal virtues. The species do well in a mixture of loam and peat, and cuttings root freely under a glass. *C. crispus* is used in intermittent fevers and liver complaints; a poisonous principle called picrotoxin has been detected in the seed of *C. suberosus*. *Synonyme*: 1, *Menispermum coculus*. See *Wendlandia*.

COCHINEAL FIG. See *Opuntia cochinchinensis*.

COCHINEAL TREE. See *Quercus coccifera*.

COCHLEARIA, *Tournefort*. From *cochlear*, a spoon; the leaves are hollowed like the bowl of a spoon. *Linn.* 15, Nat. Or. *Brassicaceae*. Plants of little interest with the exception of *C. Armoracia*, the common horse-radish, which should be planted in February or October in a deep rich soil; the best way of increasing it is by slips from the root. The smaller perennial kinds do best in pots or rock-work. The annuals and biennials merely require sowing in the open border, which should be done directly after the seeds have ripened. *Synonymes*: 1, *C. pusilla*; 2, *Myagrum saxatile*. See *Lepidium*, *Senebiera*, *Grællisia*, *Ionopodium*.

acutalis 1, *auriculata*, *glastifolia*, *macrocarpa*, *saxatilis* 2.

COCHLEATE, twisted to resemble the shell of a snail.

COCHLOSPERMUM, *Kunth*. From *kocho*, to twist, and *sperma*, a seed; alluding to the somewhat twisted seeds. *Linn.* 16, Or. 8, Nat. Or. *Ternstroemiaceae*. Magnificent trees, attaining the height of sixty feet; the best soil for them is loam and peat; cuttings not too ripe, taken off at a joint, will root in sand, under a glass, in a moist heat. *Synonymes*: 1, *Bombax Gossypium*, *B. grandiflorum*; 2, *B. vitifolium*.

Gossypium 1. Yellow 5, S. Ev. T. 60 E. Indies . 1824
serratifolium 2 Yellow 5, S. Ev. T. 60 Mexico . 1820

COCK'S-COMB. See *Celsodia*.

COCK'S-COMB. See *Rhinanthus Crista-galli*.

COCK'S-COMB. See *Erythrina Crista-galli*.

COCK'S-FOOT. See *Echinochloa Crus-galli*.

COCK'S-FOOT GRASS. See *Dactylis*.

COCK'S-SPUR. See *Cratægeus Crus-galli*.

COCOA-NUT TREE. See *Cocos*.

COCOA PLUM. See *Chrysobalanus*.

COCOMILLA. See *Prunus cocomilla*.

COCOS, *Linn.* From the Portuguese word *coco*; the end of the nut resembles a monkey's head. *Linn.* 21, Or. 6, Nat. Or. *Palmaceae*. The cocoa-nut tree belongs to this elegant genus. The species grow upwards of fifty feet high, and are cultivated best in a mixture of loam and peat, or light sandy loam, in a warm moist atmosphere. They succeed well in our collections if they have plenty of heat and are not too much exposed to the sun, as in their native countries they thrive best in the shade. *Synonyme*: 1, *C. comosa*. See *Acrocodmia*, *Lodoicea*.

flexuosa . . . Pa. gr. 6, S. Palm. 50 Brazil . 1825

COCOTENDRE. See *Lodoicea seychellarum*.

CODARIUM, *Solander*. Derived from *kodarion*, a leathern pouch, in reference to the pods. *Linn.* 2, Or. 1, Nat. Or. *Fabaceae*. Ornamental trees, from twelve to twenty feet high. For culture and propagation, see *Copaifera*.

acutifolium . Pa. red 2, S. Ev. T. 15 S. Leone . 1800

obtusifolium Pa. red 2, S. Ev. S. 10 S. Leone . 1824

CODIA, *Forst.* From *kodeia*, a little ball, because the flowers grow in small round heads. *Linn.* 10, Or. 1, Nat. Or. *Cunoniaceae*. An ornamental genus requiring the same treatment as *Callitriche*.

montana . White . 4. G. Ev. S. 10 N. Caledon. 1850

CODIÆUM, *Juss.* Name not explained. *Linn.* 21, Or. 8, Nat. Or. *Euphorbiaceae*. This is a small genus separated from *Crötön*, and containing the well-known beautiful *Crötön pictum*. The species are Asiatic trees and shrubs, and require the same treatment as *Crötön*. *Synonyme*: 1, *Crötön pictum*.

pictum 1 . Whit. gr. 7, S. Ev. S. 4 E. Indies . 1810

CODIUM, *Stackhouse*. From *kodion*, a skin; on account of the appearance of the species. *Linn.* 24, Or. 7, Nat. Or. *Fucaceae*. Marine productions of little interest—*Bursa*, *tomentosum*.

CODLINS AND CREAM. See *Epilobium hirsutum*.

CODON, *Linn.* From *kodon*, a little bell, referring to the shape of the corolla. *Linn.* 10,

Or. 1, Nat. Or. *Hydrophyllaceæ*. A curious plant, thriving in a mixture of loam and peat; it requires to be kept with the greenhouse plants.

Royén . . . White . 9, G. B. 1 C. G. H. . . 1801

CODONÓPHORA, *Linn.* From *kodon*, a little bell, and *phoreo*, to bear; alluding to the flowers. *Linn.* 14, Or. 2, Nat. Or. *Gesneriaceæ*. Ornamental plants. For culture, &c., see *Gesneria*. *Synonymes*: 1, *Gesneria prasinata*. *G. tonentosa*.

grandiflora 1 Scarlet . 6, S. Ev. S. 1½ Brazil . . 1818
lanceolata 2 . Scarlet . 6, S. Ev. S. 1½ Amer. . 1752

CODONÓPSIS, *Wallich.* From *kodon*, a bell, and *opsis*, resemblance, in reference to the shape of the flowers. *Linn.* 5, Or. 1, Nat. Or. *Campyulidaceæ*. A mixture of sand and loam will suit this genus, and propagation may be effected by cuttings and seeds. *Synonyme*: 1, *Wahlenbergia rotundifolia*.

cordata . . . Gr. yel. 6, S. Ev. Cl. 4 Java . . 1861
lurida . . . Gr. pur. 6, H. A. 1 India . . 1837

CÆLIA, *Lindley*. Not explained. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. This is described as being a very curiously formed genus, and requiring the same treatment as *Stanhopea*. *Synonymes*: 1, *Cymbidium tripterum*; 2, *Epidendrum tripterum*.

Baueriana . . . White . 6, S. Epi. 1 Jamaica . . 1790
macrostachya Red . 2, S. Epi. 1½ Guatemala . 1840

CÆLI RÓSA. See *Lychnis Cæli Rósa*.

CÆLÓGYNE, *Lindley*. From *koilos*, hollow, and *gyne*, a female; in allusion to the form of the stigma. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. The species of this genus are all very handsome when in flower, and therefore deserve to be in every collection of orchideous plants. Some of the species having been introduced only a short time, they are therefore rather rare in collections. They should be grown in a hot damp heat, and otherwise treated as the *Stanhopea*. *Synonymes*: 1, *Chelomanthera speciosa*; 2, *Pleione Wallichiana*.

COÏTSA. See *Plectranthus Coïtisa*.

COFFEA, *Linn.* Named from Coffee, a province of Narea in Africa, where it grows in abundance. *Linn.* 5, Or. 1, Nat. Or. *Cinchonaceæ*. The Coffee-tree is a very ornamental plant, succeeding well in peat and loam, and if kept clean and free from insects it will flower and fruit abundantly; to grow well, it must have a good supply of water and plenty of pot-room; cuttings of the ripened wood root readily in sand, under a glass, in a moist heat. Coffee is the roasted seeds of *C. arabica*, and owes its character to a peculiar chemical principle called Caffein. *Synonyme*: 1, *Tetramèrium paniculatum*.

COLLÆA, *De Candolle.* See *Chrysanthellum*—*speciosa*, *trinervis*.

COLLÀNIA, *Herbert.* *Linn.* 6, Or. 1, Nat. Or. *Amarylhidaceae*. "It is much to be lamented that seeds of the *Collànias*, as well as numerous species of splendid *Bomàreas*, have not been gathered by collectors, and remitted to Europe. Most of them would live out of doors in England, with a little covering in winter of sawdust, leaves, or ashes, and probably in the South of Europe, would require no care, except, perhaps, watering in dry summers. I wish that I could excite some of our wealthy cultivators to turn their thoughts to the acquisition of these plants, and their numerous kindred, which are profusely scattered over the slopes of the Andes, and waste their beauties in the woods, as yet unnoticed by any European traveller." *Herbert on Bulbous Plants.* 1837.

Andinamarçana Red gr. 4, G. Her. P. 6 Peru . 1845

COLLAPSING, the act of closing or falling together.

COLLÈMA, *Hoffmann.* From the Greek *kolla*, glue; all the species are gelatinous. *Linn.* 24, Or. 9, Nat. Or. *Collemaaceae*. A rather extensive genus of *Lichens*, varying from half an inch to three inches high, found in a variety of situations, some being on the trunks and roots of trees, some on rocks, and others on old walls and dry banks, &c.—*Burgéssii*, *ceranoides*, *cheileum*, *corrugatum*, *cretaceum*, *crispum*, *dermatinum*, *fasciculare*, *flaccidum*, *fluviatile*, *fragile*, *fragrans*, *fårurum*, *granulatum*, *lacerum*, *limosum*, *melenum*, *m. marginale*, *microphyllum*, *multiparitum*, *muscioides*, *nigræscens*, *nigrum*, *palmatum*, *picatile*, *saturninum*, *Schraderi*, *scottinum*, *S. sinuatum*, *spongiosum*, *subtile*, *synalissum*, *tenax*, *tenuissimum*, *tremeloides*, *tunæforme*, *turgidum*.

COLLEMACEÆ. A small order of flowerless plants, intermediate betwixt *Algae* and *Lichens*, having the thallus of an *Alga*, and the fruit of a *Lichen*.

COLLÈTIA. A name given by Commerson, in honour of his friend and countryman M. Collet, a writer upon the plants of Brest. *Linn.* 5, Or. 1, Nat. Or. *Rhamnaceae*. Ornamental shrubs, varying from two to five feet high. For culture and propagation, see *Retanilla*. *Synonymes*: 1, *C. ferax*; 2, *C. horrida*; 3, *C. cruciata*.

Bictoniensis 3 White . 5, F. Ev. S. 3 S. America 1856

spindsa 2 . . . Apetal 6, S. Ev. S. 2 Peru . . . 1823

COLLIGUAJA, *Molina.* The name given to it by the natives. *Linn.* 21, Or. 10, Nat. Or. *Eu-*

- phorbiaceæ*. A shrub of considerable merit, though little known in cultivation.
- odorifera . Yel. wht. 4, G. Ev. S. 6 Chile . . 1831
- COLLINSIA**, *Nuttall*. In honour of Zac. Collins; vice-president of the Academy of Natural Sciences, Philadelphia. *Linn.* 14, Or. 2, Nat. Or. *Scrophulariaceæ*. A most elegant genus of hardy annuals: the seeds of the different kinds need only to be sown in the borders of the flower-garden early in spring, they will then flower beautifully during summer, and ripen plenty of seeds; to obtain flowering plants early in spring, the seed must be sown in autumn.
- bartsieifolia . Pk. pur. 6, H. A. 1
 bicolor . . Pur. wh. 6, H. A. 1½ California 1833
 alba . . . White . 6, H. A. 1½ California 1851

- COLOCYNTH**. See *Cucumis Colocynthis*.
- COLOCYNTH RESIN**. See *Cucumis Colocynthis*.
- COLOGANIA**, *Kunth*. In honour of the family of Cologan, of Port Orotavo in Teneriffe, from whom the men of science visiting that island experience the greatest hospitality. *Linn.* 17, Or. 4, Nat. Or. *Fabaceæ*. A beautiful genus of climbers. For culture and propagation, see *Clitoria*. *Synonymes*: 1, *Clitoria Broussonetii*.
 angustifolia . Violet S. Ev. Tw. 3 Mexico . . 1827
 Broussonetii Violet S. Ev. Tw. 3 . . 1827
- COLOMBA WOOD**. See *Coscinium fenestratum*.
- COLOMBO ROOT**. See *Cocculus palmatus*.
- COLOPHONIA**, *Commerson*. Its name in the Isle of France is Bois de Colophone. *Linn.* 6, Or. 1, Nat. Or. *Burseraceæ*. An ornamental tree, scarcely known in collections. For culture and propagation, see *Boswellia*.
 mauritiana . Purple 4, S. Ev. T. 20 Mauritius . 1826
- COLOQUINELLA**. See *Cucurbita aurantia*.
- COLOQUINTIDA GOURD**. See *Cucumis Colocynthis*.
- COLDRANS**, changeable, coloured.
- COLORATE**, coloured, painted.
- COLPÐON**. See *Fusanus*.
- COLPÐON-TREE**. See *Cassine Colpdon*.
- COLQUHOUNIA**, *Wall*. In honour of Sir Robert Colquhoun. *Linn.* 14, Or. 1, Nat. Or. *Lamiaceæ*. A pretty scarlet climber, nearly hardy, and requiring to be grown in sandy loam and peat; cuttings will grow if planted in sand, under a glass, in a gentle heat.
 coccinea . Or. scar. 5, F. Ev. Cl. 6 E. Indies . . 1840
- COLT'S-FOOT**. See *Tussilago*.
- COLUBRINA**, *Richard*. From *koluber*, a snake; alluding to the appearance of the twisted stems. *Linn.* 5, Or. 1, Nat. Or. *Rhamnaceæ*. Plants of little beauty, and scarcely worth cultivating except in general collections; loam and peat suits them, and cuttings of the young wood root readily in sand, under a glass. *Synonymes*: 1, *Ceanothus asiaticus*; 2, *C. cubensis*; 3, *C. colubrina*; 4, *C. reclinatus*.
 asiatica 1 . . Pa. yel. 7, G. Ev. S. 10 Ceylon . 1691
 cubensis 2 . . Crim. 7, S. Ev. S. 4 Cuba . . 1820

- COLUBRINA**, relating to snakes.
- COLUMBINE**. See *Aquilegia*.
- COLUMBINUS**, resembling a dove in shape or colour.
- COLUMBO ROOT**. See *Cocculus palmatus*.
- COLUMÉLLIA**. Named by Jacquin after the celebrated Geoponic writer, L. J. M. Columella, a Spaniard, who flourished about forty-two years A.C. *Linn.* 19, Or. 2, Nat. Or. *Columelliaceæ*. A greenhouse biennial, growing in any common soil. *Synonymes*: 1, *Nestlora biennis*—biennis 1.
- COLUMELLIACEÆ**. A small order consisting of evergreen shrubs or trees of no particular beauty—not far removed from *Jasmines*.
- COLUMNEA**, *Plumier*. In honour of Fabius Columna, of the noble family of Colonna, in Italy. *Linn.* 14, Or. 2, Nat. Or. *Gesneraceæ*. Pretty flowering plants, growing well in a mixture of loam and peat, and striking readily from cuttings; the plants must be carefully watered or they will soon rot; they require a dry part of the house. *Synonymes*: 1, *C. rotundifolia*, *speciosa*; 2, *C. grandiflora*, *Nematanthus Guilleminiana*. See *Stemodia*, *Alloplectus*, *Collandara*, and *Nematanthus*.
 aurantiaca . Orange 6, S. Ev. Cl. 1 N. Grenada 1850

splendens 2 . . . Scarlet 7, S. Ev. S. 1	Brazil	
trifoliata . . . Blue . 9, S. Ev. S. 8		. 1823

COLURIA, *R. Brown*. From *kolouros*, deprived of a tail; in reference to the seed wanting that appendage. *Linn.* 12, Or. 3, Nat. Or. *Rosaceæ*. A pretty species, thriving best in a mixture of peat and loam, and increased by divisions. *Synonymes*: 1, *Geum potentilloides*.
potentilloides 1 Orange 6, H. Her. P. 1/2 Siberia . 1780

COLURNA. See *Corylus Colurna*.

COLUTEA, *Linn.* Supposed to be from *koluo*, to amputate; they are said to die if the branches are cut off. *Linn.* 17, Or. 4, Nat. Or. *Fabacæ*. All the species of Bladder-Senna, on account of the great profusion of flowers, and their continuing in bloom the most of the season, are well adapted for the shrubbery; they thrive in any common soil, and are increased by seeds, or cuttings planted in the autumn. *C. arborescens* is purgative. *Synonymes*: 1, *C. Pocockii*. See *Sphaerosphaea*, and *Sutherlandia*.

arborescens . . . Yellow 7, H. De. S. 10	France	. 1548
cræta . . . Scarlet 6, H. De. S. 4	Levant	. 1710
haléptica 1 . . . Yellow 8, H. De. S. 6	Levant	. 1752
media . . . Orange 7, H. De. S. 10		
nepalensis . . . Yellow 8, H. De. S. 6	Nepal	. 1822

COLVILLEA, *Bojer*. In honour of Sir Charles Colville, Governor of the Mauritius. *Linn.* 10, Or. 1, Nat. Or. *Fabacæ*. A splendid tree, from forty to fifty feet high; little is at present known of its cultivation.

racemosa . . . Scarlet . 4, S. Ev. T. 40 Madagascar

COLYMBEA. See *Araucaria imbricata*.

COLZA or **COLSA**. See *Brassica campestris*.

COMACLINIUM. See *Conoclinium*.

COMÁNDRA, *Nuttall*. Derived from *kome*, hair, and *amer*, anther; in allusion to the tuft of hair attached to the anthers. *Linn.* 5, Or. 1, Nat. Or. *Santalacæ*. A hardy plant of some merit, thriving in a mixture of loam and peat, and increased by divisions. *Synonymes*: 1, *Thesium umbellatum*, *Hamiltonia umbellatum*.
umbellata . 1 Green . 6, H. Her. P. 1 N. Amer. 1782

COMARÓPSIS, *Richard*. From *komaron*, the comarum, and *opsis*, appearance; because of its resemblance to Marsh Cinquefoil. *Linn.* 12, Or. 3, Nat. Or. *Rosacæ*. Pretty herbaceous plants. For culture and propagation, see *Geum*. *Synonymes*: 1, *Dalibarda fragarioides*, *Waldsternia Doniana*; 2, *D. fragarioides*.

Doniana 1 . . . Yellow . 5, H. Her. P. 1/2 N. Amer. 1800
fragarioides? White . 5, H. Her. P. 1/2 N. Amer. 1803

COMAROSTÁPHYLIS, *Endl.* From *komaros*, the *Arbutus*, and *staphyles*, a bunch of grapes. *Linn.* 8, Or. 1, Nat. Or. *Ericacæ*. Pretty half hardy plants, resembling *Arbutus*. They may be raised from seeds, or be budded upon the *Arbutus*.

arbutoides . . . White . 5, G. Ev. S. Guatemala 1842
polifolia . . . Crimson 5, G. Ev. S. Guatemala 1840

COMARÓTIS, *Lindley*. See *Camarotis*.

COMARUM, *Linn.* Derived from *komaron*, the *Arbutus*; on account of the similarity of its fruit. *Linn.* 12, Or. 3, Nat. Or. *Rosacæ*. Interesting plants, growing in any moist soil, and increased by divisions. *Synonymes*: 1, *Fragaria sterilis*; 2, *Potentilla Comarum*.

fragarioides 1 White . 4, H. Her. P. 1 Brit., banks.
palustre 2 . . . Purple . 6, H. Her. P. 2 Brit., bogs.
variegatum . Purple . 7, H. Her. P. 2 Brit., gard.

COMATUS, tufted.

COMAUREA. See *Chrysocoma Comaurea*.

COMBRETACEÆ. An extensive order of small trees and shrubs, some of considerable beauty. All are natives of the tropics.

COMBRETUM, *Læffing*. A name given to a climbing plant by Pliny. *Linn.* 8, Or. 1, Nat. Or. *Combretacæ*. Plants surpassed by few in the elegance and brilliancy of their blossoms; they all thrive well in loam and peat, and cuttings of the young wood root readily in a pot of sand, in a moist heat, with a glass over them. The climbing species are well adapted to training up the rafters, or covering the trellis-work in a stove. *Synonymes*: 1, *C. macrophyllum*; 2, *C. laxum*. See *Polevrea*.

elegans . . . Scarlet 5, S. Ev. Cl. 12	Brazil	. 1820

COMESPÉRMA, *Labillardière*. From *kome*, the hair of the head, and *sperma*, a seed; alluding to the tuft of hairs at the end of the seed. *Linn.* 14, Or. 5, Nat. Or. *Polygalacæ*. These species are well worthy of cultivation, succeeding best in sandy loam and peat, and young cuttings will root freely in sand, under a glass.
cordifolia . . . Purple . 6, G. Ev. S. 3 N. Holl. . 1822
ericina . . . Purple . 6, G. Ev. S. 3 N. Holl. . 1822
gracilis . . . Blue . 4, G. De. Tw. 6 Australia. 1834

COMFREY. See *Symphitum*.

COMFITA. See *Schmidèlia Comfita*.

COMMELYNA, *Linn.* In honour of J. and G. Commelin, famous Dutch botanists. *Linn.* 3, Or. 1, Nat. Or. *Commelynacæ*. Some of the plants of this genus are very handsome; the stove kinds grow freely in a mixture of sandy loam and peat, and are increased by divisions or seeds. The hardy kinds thrive in common garden soil, and are increased by offsets from the roots, or by seeds; the annual species require the same treatment as other hardy and tender annuals. *Synonyme*: 1, *C. bengalensis*.

clandestina, orchioidea.

COMMELYNACEÆ. An order of pretty herbaceous plants, well known under the name of Spider-worts.

COMMERSÔNIA, Forster. In honour of Philibert Commerson, M. D., a French botanist and traveller, who died in 1774. *Linn.* 5, Or. 5, Nat. Or. *Byttneriaceæ.* These ornamental shrubs thrive well in a mixture of peat and loam, and cuttings of the ripened wood will root readily in sand, under a glass, in heat. See *Byttneria*.

echinata . . . White . 6, S. Ev. S. 3 Moluccas . 1820
platyphylla White . 6, S. Ev. S. 8 Moluccas . 1806

COMMIDÉNDRUM, De Candolle. From *kommi*, gum, and *dendron*, a tree. *Linn.* 19, Or. 2, Nat. Or. *Asteriaceæ.* See *Conjea*.

COMMUNATED, pulverised, pounded.

COMMIPHORA, Jacquin. From *kommi*, gum, and *phero*, to bear. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ.*

madagascariensis . . . 8, S. Epi. Madagascar 1820

COMOCLÁDIA, P. Broune. From *come*, a tuft, and *klados*, a branch; the leaves being crowded at the tops of the branches. *Linn.* 3, Or. 1, Nat. Or. *Anacardiaceæ.* Ornamental trees, from fifteen to twenty feet high, succeeding well in a mixture of peat and loam, or any light rich soil; ripened cuttings will root in sand, under a glass, in heat.

dentata . . . Red . . 7, S. Ev. T. 25 W. Ind. . 1790
ilicifolia . . . Red . . 5, S. Ev. T. 15 CaribbeeI. 1789
integrifolia . Red . . 7, S. Ev. S. 12 Jamaica . 1778

COMPACT, close, crowded.

COMPARÉTTIA, Poppig and Endlicher. Named after Andreas Comparetti, professor at Padua, and an eminent writer upon vegetable physiology. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ.* This is a splendid but a very rare genus of plants, well worth cultivating for the brilliant colour of the flowers, and their very curious structure. They will be found to succeed well potted in good fibrous peat, and the pots efficiently drained with broken potsherds, which should be carried up the centre of the peat. The plants should be raised above the pot according to their size, in the same way as *Stanhopeas*.

coccinea . . . Scarlet . 8, S. Epi. 1/2 Brazil . . . 1838
falcata . . . Rose . 5, S. Epi. 1/2 Mexico . . . 1836
rosea . . . Rose . . 5, S. Epi. 1/2 Spanish Main. 1843

COMPLANATE, flattened.

COMPLICATE, folded together.

COMPOSITEÆ. A most extensive order, bearing compound flowers, called by Lindley *Asteraceæ.*

COMPOUND, used in botany to express the union of several things into one.

COMPRESSED, pressed together, flattened.

COMPTÔNIA, Banks. In honour of Henry Compton, Lord Bishop of London, an ardent cultivator of exotics. *Linn.* 21, Or. 3, Nat. Or. *Myricaceæ.* A pretty shrub, growing about four feet high in light sandy loam or peat soil; increased by layers.

asplenifolia . Brown . 4, H. De. S. 4 N. Amer. 1714

CONAMI. See *Phyllanthus Conami*.

CONANTHÈRA, Ruiz et Pavon. From *konos*, a cone, and *anthera*, an anther; the anthers being united into a cone. *Linn.* 6, Or. 1, Nat. Or. *Liliaceæ.* A pretty genus of bulbs, growing best in light sandy loam; increased by offsets. *Synonyme:* 1, *C. bifolia*. See *Cœmilingia, Echeandia*.

bifolia . . . Blue . . 4, G. Bu. P. 2 Chile . . 1823
Simsii . . . Blue . . 4, G. Bu. P. 2 Chile . . 1823

CONCAVE, hollow.

CONGIUM. See *Hækea*.

CONCENTRIC, points, or lines, at equal distances from a common centre.

CONCRETE, formed into one mass, joined together.

CONDÁLIA, Cavanilles. In honour of A. Condal, a Spanish botanist. *Linn.* 5, Or. 1, Nat. Or. *Rhamnaceæ.* A curious plant, growing about two feet high; cultivated in any common soil, and increased by cuttings. *Synonyme:* 1, *Zizyphus myrtiloides*.

microphylla 1 Green . 5, F. Ev. S. 2 Chile . . 1824

CONDAMÍNEA, De Candolle. Named after De la Condamin, the celebrated navigator. *Linn.* 5, Or. 1, Nat. Or. *Cinchonaceæ.* Stove shrubs, requiring to be grown in a mixture of light sandy loam and heath mould, and may be increased by cuttings.

tinctoria . White . 7, S. Ev. S. S. Amer. . 1820

CONDENSATE, bundled, growing close.

CONDONOCÁRPUS. See *Gyrostemon*.

CONDYLOCÁRPUS, Hoffman. From *kondyle*, a knob, and *karpos*, fruit; in allusion to the fruit. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ.* Worthless weeds, of the simplest culture. *Synonymes:* 1, *Tordylium apulum*; 2, *T. humile*; 3, *T. officinale*—*apulum* 1, *humile* 2, *officinale* 3.

CONE, a particular kind of compound fruit.

CONESSI BARK. See *Wrightia antidysenterica*.

CONFERRUMINATE, united together so as to be undistinguishable.

CONFÉRVÁ, Agardh. Derived from the Latin *conferrumino*, to consolidate; because of the close coherence. *Linn.* 24, Or. 7, Nat. Or. *Confervaceæ.* A very extensive and interesting genus of *Algæ*, found chiefly in the ocean, lakes, pools, ditches, &c. See *Desmidiium, ægagropila, cerea, ceruginosa, alpina, arcta, arenosa, aspera, bombycina, Brownii, capillaris, carnea, catenata, collabens, congregata, crassa, crispata, curta, dissiliens, distans, ericetorum, fasciata, ferruginea, flacca, flaccida, flavescens, floccosa, fracta, fucorum, glomerata, gracilis, heterochloa, hormoides Hutchinsiae,*

- impléca, intricata, isogona, laevis, linum, megalonitium, mucosum, nuda, patens, p. prolifera, pellucida, purpurascens, refracta, riparia, rivularis, r. anglica, rupéstris, sericea, stellaris, tortuosa, tumidula, vaucheriaformis, vesicata, v. fuscescens, Youngiana, zonata.*
- CONFERVACEÆ.** A large order of flowerless water plants of the simplest structure. The colours are green, olive, violet, and red; but the prevailing colour is green.
- CONFLUENT,** running into one another at the base or apex.
- CONGLUTINATE,** glued together into one mass.
- CONICAL,** shaped like a cone.
- CONICALLY-SUBULATE,** between cone and awl-shaped, thickest at the base.
- CONICO-CYLINDRICAL,** form of a cylinder, but tapering to a point.
- CONICO-SUBULATE,** awl-shaped and conical, tapering to a point.
- CONIC-OVATE,** between egg-shaped and conical.
- CONFIFERÆ or CONFIFERS.** See *Pinacææ*.
- CONIUM.** Derived, according to Linnæus, from *konis*, dust or powder; the application of the term is not evident. *Linn. 5, Or. 2, Nat. Or. Apiacææ.* The annual species of this genus merely require sowing in the open ground in autumn; the stove species delight in a rich mould, and are increased by dividing the roots. In the south of Europe *C. maculatum* is a dangerous poison, while in Russia and the Crimea it is innocuous and eatable. See *Arvacacia, Capnophyllum, Eranthe, Trachyspermum, and Ulospérumum.*
croaticum . White . 7, H. Her. P. 5 Hungary . 1818
maculatum White . 6, H. B. 5 Brit., hedges.
moschatum White . 6, S. Fu. P. 3 S. Amer. . 1824
- CONIUM OF THE GREEKS.** See *Cicula virida.*
- CONJUGATE,** joined in pairs; chiefly applied to leaves.
- CONNARACEÆ or CONNARADS.** A small order of tropical trees and shrubs, some bearing handsome flowers, and others eatable fruit.
- CONNARUS,** *Linn.* From *connarus*, the name of a tree described by Athenæus. *Linn. 16, Or. 6, Nat. Or. Connaracææ.* The species of this genus are ornamental plants, growing from six to eight feet high; they succeed best in a mixture of peat and loam, and increase by cuttings of the ripened wood in sand, under a glass, in heat. See *Omphalodium.*
nitidus . White . 5, S. Ev. S. 8 Silhet . . 1824
paniculatus . White . 5, S. Ev. S. 8 Chittagong 1824
pubescens . White . 5, S. Ev. S. 6 Guiana . . 1822
- CONNATUS,** joined together at the base.
- CONNIVING,** converging, lying close together.
- CONOBIA.** See *Leucocarpus.*
- CONOCARPUS,** *Linn.* From *konos*, a cone, and *karpos*, a fruit; the fruit is so closely imbricated in a head as to resemble a fir cone. *Linn. 5, Or. 1, Nat. Or. Combretacææ.* Ornamental shrubs. For culture and propagation, see *Bacida.* The bark of *C. racemosus* is much used in Rio Janeiro for tanning.

CONSÓLIDA, *Bauh.* A name used by Bauhin, but without explanation. *Linn.* 13, Or. 1, Nat. Or. *Ranunculacææ*. See *Delphinium*. Synonyms: 1, *Delphinium Aconiti*, *Aconitum monogynium*.

Aconiti l . . Purple . . . 6, H. . . B. 1½ Levant. 1801

CONSPÉRSUS, scattered, or sprinkled.

CONSTÁNTIA. See *Erica Constantia*.

CONSTRICED, tightened, or contracted in some particular place.

CONTORTUPLICATE, twisted in plaits.

CONTRACTED, narrowed in some particular place.

CONTRAJÉRVA-ROOT. See *Dorstenia Contrajérva*.

CONTRAYÉRBA. See *Flavèria Contrayérba*.

CONVALLÁRIA, *Linn.* From the Latin *convallis*, a valley; in allusion to the situation where it grows. *Linn.* 6, Or. 1, Nat. Or. *Liliacææ*. The Lily of the Valley is a sweet little plant, thriving in any common soil; it will do well in any shady situation where few other plants will succeed; it is multiplied by dividing the roots. See *Ophiopogon* and *Polygonatum*.

majalis . . . White 5, H. Her. P. ¼ Brit., woods.
flore-pleno. White 5, H. Her. P. ¼ Brit., gardens.
rubra . . . Flesh 5, H. Her. P. ¼ Brit., gardens.

CONVALLARIÆCÆE. See *Liliacææ*.

CONVEX, rising in a circular form.

CONVOLUTE, rolled together, or over each other.

CONVOLVULÆCÆE, or BINDWEEDS. An extensive order, consisting principally of twining shrubs and herbaceous plants. Many possess considerable beauty; and all the species have in a greater or less degree an acrid juice which is strongly purgative.

CONVÓLVULUS, *Linn.* Derived from the Latin *convolvere*, to entwine or wind about; in reference to the habit of the plants. *Linn.* 5, Or. 1, Nat. Or. *Convolvulacææ*. Being mostly showy plants, the tender species are well adapted to stoves and conservatories: they are best cultivated in loam and peat, and cut-

tings strike very freely in sand, under a glass; the half-hardy annual kinds should be sown on a gentle hotbed, and when of sufficient size planted out into the open border, the hardy kinds only require sowing in the open ground; the stove and greenhouse annuals and biennials require to be sown in the stove, and treated as other stove and greenhouse annuals and biennials. The roots of *C. arvensis* and *macrocarpus* abound in a milky juice, which is highly purgative, and the roots of *C. flabridus* and *scoparius* are used as sternutatories. Synonyms: 1, *C. Pseudo-siculus*; 2, *C. decumbens*. See *Calystegia*, *Exogonium*, *Ipomœa*, *Jacquemontia*, and *Pharbitis*.

arvensis, bicolor, bogotensis, dentatus, filicarpis, hirsutus, intermedium, italicus, micranthus, multifidus, serotinus.

There are also many handsome garden varieties, and some with double flowers.

CONVOLVULUS. See *Polygonum Convolvulus*.

CONYZA, Linn. From *konis*, dust; because it was supposed to have the power, when it was powdered and sprinkled, of driving away flies, whence the name Flea (Fly)-bane. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. Plants of no beauty. The stove and greenhouse shrubby kinds grow well in loam and peat; young cuttings root under a glass. The hardy herbaceous kinds grow in any garden soil, and increase by divisions or seeds. The annual and biennial species require the same treatment as other hardy and tender annuals and biennials. *Synonyme*: 1, *Conyza candida*. See *Erigeron, Psadia*, and *Solidago*.

genistaloides Yellow . . . 7, S. Ev. S. 2 S. Amer. . . 1824
odorata . . . Purple . . . 7, S. Ev. S. 2 India . . . 1759

cegyptiaca, amena, amplexicaulis, arborescens, aurita, axillaris, balsamifera, bifrons, camphorata, candida, carolinensis, chilensis, chinensis, cinerea, fastigiata, fetida, geminiflora, glomerata, Gouani, hirsuta, incisa, inuloides, limnifolia 1, marylandica, paniculata, patula, pinnatifida, prolifera, purpurascens, rigida, rugosa, rupesstris, saxatilis, sericea, sticula, sordida, spatulata, squarrosa, Tendrit, thapsoides, verbascifolia, virgata.

COCKIA, Sonnerat. In memory of the celebrated circumnavigator Capt. James Cook, R.N., who was killed in the Sandwich Islands in 1779. *Linn.* 10, Or. 1, Nat. Or. *Aurantiaceæ*. An ornamental stove tree, requiring to be cultivated in a mixture of loam and peat, and cuttings of the ripened wood with their leaves on will root in sand, under a glass, in a moist heat. A fruit called wampee, which is highly esteemed in China and the Indian archipelago, is the produce of this tree.
punctata . . . White . . . 5, S. Ev. T. 15 China . . . 1795

COOK'S TEA-PLANT. See *Leptospermum scoparium*.

COOPERIA, Herbert. In compliment to Mr. Joseph Cooper, one of the most zealous and successful cultivators of rare plants in this kingdom, and who had, for upwards of twenty years, the management of the botanic garden at Wentworth House, the property and residence of Earl Fitzwilliam. *Linn.* 6, Or. 1, Nat. Or. *Amaryllidaceæ*. Very interesting flowering bulbs; a sandy compost appears to suit them well, and a copious supply

of water. They increase freely from seed. The flowers of *C. pedunculata* are fragrant, smelling like a primrose, and are produced at night. *Synonymes*: 1, *Zephyranthus Drummondii*, *Scepranthus Drummondii*.

COPRINUS, Persoon. Named from *kopria*, dung; species found on dunghills. *Linn.* 24, Or. 9, Nat. Or. *Agaricaceæ*. The species of this genus are found on dunghills, trunks of trees, shady damp places, &c.—*atramentarius, cinereus, comatus, domesticus, ephemerus, Hendersoni, Lagopus, macrocephalus, macrorhizus, micaceus, virens, pilaceus, plicatilis, radiatus*.

COPROSMA, De Candolle. From *copros*, excrement, and *osme*, smell; the species have a fetid smell. *Linn.* 4, Or. 2, Nat. Or. *Cinchonaceæ*. A genus of easy culture, requiring to be grown in a mixture of sandy loam and heath mould, and propagated by cuttings planted in sand, and placed in a little heat.

hirtella . . . White . . . 4, G. Ev. S. 1 $\frac{1}{2}$ V. D. L. . . 1837

COPTIS, Salisbury. From *kopto*, to cut; in allusion to the divisions of the leaves. *Linn.* 13, Or. 6, Nat. Or. *Ranunculaceæ*. A pretty species, well worthy of a place in every garden, succeeding well in a bed of peat soil, or grown in pots, and protected in severe weather; increased by divisions or seeds. In the United States, the root of this plant is a popular remedy for apthous affections of the mouth in children. *Synonyme*: 1, *Helleborus trifolius*.
trifoliata 1 . . . Brown 5, H. Her. P. $\frac{1}{4}$ N. Amer. . . 1782

COQUAINE PARSNIP. See *Pastinaca sativa Coquina*.

COQUITO. See *Judaea spectabilis*.

CORALLINA, Tourn. From the resemblance of the plant to a coral. *Linn.* 24, Or. 7, Nat. Or. *Ceramidaceæ*. Sea weeds which, whilst fresh, exhibit all the colours of the rainbow.—*officinalis*.

CORALLINE. See *Corallina*.

CORALLODENDRON. See *Erythrina Corallo-dendron*.

CORALLOID, like coral.

CORAL TREE. See *Erythrina Corallo-dendron*.

CORALLORHIZA, Swartz. Said to be from *korallion*, a coral, and *rhiza*, a root. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. A genus of curious, bulbous-rooted, perfectly hardy plants. They grow well in peat and loam, and are readily increased by divisions. See *Aplëctrum*.

acutangulus, *æstuans*, *capsularis*, *hirsutus*, *olidarius*, *siltiquosus*, *trilocularis*.

CORDATE, formed like a heart.

CORDATE, when joined by a hyphen to another word, signifies a figure between the two, as cordate-reniform, a figure between heart-shaped and kidney-shaped: cordate-auriculate, having auricles at the base, so as to give the leaf the figure of a heart, with two ears.

CORDIA, Linn. In honour of E. Cordus, a German botanist of the sixteenth century. *Linn.* 5, Or. 1, Nat. Or. *Cordiaceæ*. An ornamental genus, many of the species being fine timber-trees, growing upwards of sixty feet high; best cultivated in loam and peat, and cuttings root freely in sand, under a glass, and in heat. The flesh of the fruit of *C. Myxa* and *Sebestena* is succulent, mucilaginous, and emollient. *Synonymes*: 1, *Varronia alba*; 2, *V. nifolia*; 3, *V. angustifolia*; 4, *V. monosperma*; 5, *V. bullata*; 6, *V. globosa*; 6, *V. lineata*; 7, *V. martinicensis*; 8, *V. mirabiloides*; 9, *C. angustifolia*; 10, *C. superba*. See *Patagonula* and *Varronia*.

CORDIACEÆ, OR SEBESTENS. A small order. The species are principally natives of the tropics. Some bear eatable fruit, and others furnish excellent wood for furniture and cabinet work: all are interesting.

CORD-LEAFs. See *Restiaceæ*.

CORDIFERA, heart-lipped.

CORDYLÏNE, Commerson. From *kordyle*, signifying a club. *Linn.* 6, Or. 1, Nat. Or. *Liliaceæ*. Ornamental shrubs, cultivated in a mixture of peat and loam, or any light vegetable soil; readily increased by suckers. *Synonymes*: 1, *Terminalia angustifolia*, *Sansevieria frutescens*, *Rumphii*, *Charwoodia australis*; 2, *Dracena indivisa*; 3, *Dracena javanica*, *Sansevieria javanica*; 4, *C. spectabilis*; 5, *Asparagus terminalis*, *C. COREMA, D. Don. From *corema*, a broom; in allusion to the habit of the plant. *Linn.* 22, Or. 3, Nat. Or. *Empetraceæ*. An ornamental dwarf shrub, succeeding well in sandy peat, and increased by layers. *Synonymes*: 1, *Empetrum album*.

alba 1 . . . Apetal . 4, H. Ev. S. 1 Portugal . 1774

COREMIUM, Nees. From *corema*, filth; found there. *Linn.* 24, Or. 9, Nat. Or. *Botrytaceæ*. A very minute fungus, found on old paste, &c. —*glaucum*.

COREOPSIS, Linn. From *koris*, a bug, and *opsis*, appearance; because of the resemblance of the seeds. *Linn.* 19, Or. 3, Nat. Or. *Asteraceæ*. A very pretty genus of plants, the stove perennial kinds grow freely in any rich light soil, and cuttings root under a glass; some of the hardy kinds are tall growing plants well adapted to the back of flower borders, or vacant places in the shrubbery, some of the smaller species are very handsome, and may be planted near the front; they are increased by division of the roots. The hardy and tender annuals and biennials require the same treatment as other hardy and tender annuals and biennials. *Synonymes*: 1, *C. auriculata*

diversifolia. See *Actinomeris*, *Bidens*, *Calliopsis*, *Chrysostemma*, *Cbsmea*, *Echinacea*, *Silphium*, *Simsia*, *Ximenesia*.

amplicaraulis.

COREOSMA, *Spach*. See *Rhus*.

CORETHROSTYLIS, *Endl.* From *corethron*, a broom; in allusion to the singularly hairy style. *Linn.* 5, Or. 1, Nat. Or. *Sterculiaceae*. A very curious greenhouse shrub. It has been found to thrive best in rough peat, with one fourth silver sand, and treated similarly to Cape heaths. It is propagated by cuttings without difficulty.

bracteata . Pink . 4, G. Ev. S. 3 Swan R. . 1844

CORLACEOUS, thick, tough like leather.

CORIANDER. See *Coriandrum*.

CORIANDRUM, *Hoffman*. From *koris*, a bug; alluding to the smell of the leaves. *Linn.* 5, Or. 2, Nat. Or. *Apiaceae*. A species of little beauty, which only requires to be sown in the open ground. The seeds are well known as a warm and agreeable aromatic. See *Biforis*.

sativum . . White . 6, H. A. 2 Eng. fields.

CORIARIA, *Linn.* From *corium*, a hide. *Linn.* 22, Or. 9, Nat. Or. *Ochnaceae*. Ornamental shrubs; the hardy species succeed well in the open border, and are readily increased by cuttings of the roots, or by suckers. The other species thrive well in a mixture of sand, loam, and peat; and cuttings under a glass, in the same kind of soil, will root freely. *C. myrtifolia* is not only used in tanning leather, but also for staining black. Its fruit is poisonous.

CORIARIACEÆ. See *Ochnaceae*.

CORINDUM. See *Cardiospermum Corindum*.

CORINTHOS or **ZANTE CURRANTS**. See *Vitis*.

CORION. See *Biforis*.

CORIS, *Linn.* A Greek name, used by Dioscorides. *Linn.* 5, Or. 1, Nat. Or. *Primulaceae*. An ornamental little plant, rather of a succulent nature, growing in peat and loam, with the pots well drained and a limited supply of water; it produces seeds in great plenty.

monspeliensis . Lilac . 6, G. B. $\frac{1}{2}$ S. Eur. . 1640

CORISPERMUM, *Linn.* From *koris*, a bug, or tick, and *sperma*, a seed. *Linn.* 1, Or. 2, Nat. Or. *Chenopodiaceae*. Inconspicuous hardy annuals, which merely require sowing in the open ground—*canescens*, *glomeratum*, *hyssopifolium*, *intermedium*, *Marschallii*, *nitidum*, *pätens*, *pungens*, *Reddowskii*, *sabulodum*, *squarrosium*, *tenuis*.

CORK-TREE. See *Quercus suber*.

CORKWOOD. See *Andra palustris*.

CORMIER. See *Cornus mascula*.

CORNACEÆ. Principally trees and shrubs found in temperate climates, possessing considerable medicinal qualities.

CORN-COCKLE. See *Lycchnis Githago*.

CORNELIS. See *Cornus mascula*.

CORNELIAN CHERRY. See *Cornus mascula*.

CORN-FLAG. See *Gladiolus bullatus*.

CORNICULARIA, *Acharius*. From *corniculus*, a little horn; referring to the divisions of the thallus. *Linn.* 24, Or. 9, Nat. Or. *Parmeliaceae*. A genus of *Lichens* found on mountains and alpine rocks—*aculeata*, *a. spadicea*, *bicolor*, *heteromalla*, *lanata*, *ochroleuca*, *pubescens*, *tristis*.

CORNICULATED, furnished with little horns.

CORNISH MONEYWORT. See *Sibthorpia europæa*.

CORN MUSTARD. See *Sinapis arvensis*.

CORN SALAD. See *Valerianella*.

CORN-WEED. See *Biserrula pelocinus*.

CORNUCOPIÆ, *Linn.* From *cornu*, a horn, and *copia*, plenty; the spike enclosed in the involucre resembles the horn of plenty. *Linn.* 3, Or. 1, Nat. Or. *Graminaceae*. This is an annual grass, that only requires to be sown in the open ground. See also *Fedia Cornucopiae cucullatum* . Apetal . 8, H. Grass. $\frac{1}{2}$ Levant . 1783

CORNUS, *Tournefort*. Derived from *cornu*, a horn; the wood being thought as hard and durable as horn. *Linn.* 14, Or. 1, Nat. Or. *Cornaceae*. This is an ornamental genus, consisting principally of trees and shrubs, that succeed well in any common soil; they are increased by seeds or by layers, the herbaceous species are generally grown in pots, but they grow well in a bed of peat, and are increased by dividing the roots. The bark of *C. florida* and *sericea* is said to rank among the best tonics of N. America. *Synonymes*: 1, *Cornus stricta*, *asperifolia*, *C. asperifolia*; 2, *C. oblongifolia*. See *Benthämia*.

CORNUTA, horned, furnished with horns.

CORNUTIA, *Linn.*. Named after Jacques Cornutus, a French physician and traveller. *Linn.* 2, Or. 1, Nat. Or. *Verbenaceæ*. An ornamental shrub, growing about six feet high, succeeding well in a mixture of loam and peat; cuttings strike freely in sand, under a glass. See *Hæsta*.

pyramidata . . . Blue . 7, S. Ev. S. 6 Mexico . 1738

COROKIA, *Cun.* Corokia-taranga, its vernacular name. *Linn.* 22, Or. 5, Nat. Or. *Rhamnaceæ*. A very pretty shrub, requiring only the ordinary treatment of greenhouse plants, and to be increased by cuttings planted in sand, under a glass.

buddleoides . . . White 4, G. Ev. S. 3 N. Holl. . 1835

COROLLA, the coloured part of a flower, composed of a petal or petals. The term is only applied when the calyx is present, otherwise it is called a perianth.

COROLLIFLORÆ. All plants are so called when they have a monopetalous corolla not attached to the calyx, the stamens inserted into the corolla, and the ovarium superior—as in *Convulvulus*, &c.

CORONA, a crown; in botany applied to the crown-like cup, which is found at the orifice of the tube of the corolla in *Narcissus*, *Pan-crætium*, and some others.

CORONILLA, *Necker*. Derived from *corona*, a crown; in reference to the arrangement of the flowers. *Linn.* 17, Or. 4, Nat. Or. *Pabacææ*. An interesting genus; several of the greenhouse species are very pretty flowering shrubs, and grow well in a mixture of peat and loam, and may be increased by cuttings or seeds, which ripen in abundance; the herbaceous species are some of them best grown in pots, such as *C. coronata* and *minima*, as they require the protection of a frame in severe weather; increased by seeds or dividing at the roots: the hardy annual kinds only require to be sown in the open ground. *Synonymes*: 1, *C. orientalis*; 2, *C. coronata*; 3, *C. stipularis*.

CORONOPUS. See *Senebiera*.

CORPUSCLE, a small body, a particle of anything.

CORREIA, *Smith*. In honour of Joseph Correa da Serra, a distinguished Portuguese botanist. *Linn.* 8, Or. 1, Nat. Or. *Rutacææ*. The species of this genus are pretty greenhouse shrubs, growing from three to six feet high; they succeed best in a mixture of equal parts of sand

and loam; the species are increased by cuttings, which should not be planted too thick, as they are liable to damp off. *C. speciosa*, which is allowed to be the most difficult, may be increased by inarching upon the common sorts.

indica . . . Yellow . 7, G. Her. P. 4 India . . 1842

CORYANTHES, *Hooker*. From *korys*, a helmet, and *anthos*, a flower; in allusion to the large helmet-like appendage to the lip of the flower. *Linn.* 20, Or. 1, Nat. Or. *Orchidacææ*. The species of this genus ought to be extensively cultivated, because of their splendid and very curiously-formed flowers. The most extraordinary species of this genus is *C. macrantha*, of which the following is an abridged description, extracted from the *Botanical Register*: "The plant has the habit of a *Stanhopea*, and pushes forth from the base of its pseudo-bulbs a pendulous scape, on which two or three flowers are developed; each flower is placed at the end of a long, stiff, cylindrical-furrowed ovary, and when expanded, measures some-

thing more than six inches from the tip of one sepal to that of the opposite one. The sepals and petals are nearly of the same colour, being of an ochrey yellow, spotted irregularly with dull purple. The lip is as fleshy and solid in its texture as the sepals and petals are delicate; it is seated on a deep purple stalk, nearly an inch long; this stalk terminates in a hemispherical greenish-purple cup or cap; and the latter contracting at its front edge, extends forward into a sort of second stalk of a very vivid blood-colour, the sides of which are thinner than the centre, turned back, and marked with four or five very deep, solid, sharp-edged plaits. These edges again expand and form a second cup, less lobed than the first, thinning away very much to the edges, of a broadly conical figure, with a diameter of at least two inches at the orifice; this second cup is of an ochrey yellow, streaked and spotted with pale crimson, and seems intended to catch a watery secretion, which drips into it from two succulent horns, taking their origin in the base of the column, and hanging over the centre of the cup."—*Bot. Reg.* vol. xxii. t. 1841. The genus requires the same treatment as is recommended for *Stanhopea*.

Synonymes: 1, *Gongdra macrantha*; 2, *G. speciosa*.

CORYDALIN. A peculiar alkali obtained from the roots of *Corydalis tuberosa*.

CORYDALIS, *De Candolle*. One of the Greek names of *Fumitory*; from *korydalos*, a lark; because the spur of the flower resembles the spur of that bird. *Linn.* 17, Or. 2, Nat. Or. *Fumariaceae*. This is a beautiful genus, the species of which grow from one to six feet high; the delicate kinds thrive best in a mixture of peat and loam, and are very ornamental in flower-borders; the annual kinds only require sowing in the open bor-

der; seeds. *Synonymes*: 1, *Fumaria solida*; 2, *F. fabacea*; 3, *F. sempervirens*; 4, *F. pauciflora*; 5, *F. cava albiflora*. See *Adiantum* and *Dilyletra*.

CORYLACEÆ, or **MASTWORTS**. An order containing the nut, and some of our best timber trees, as the oak, beech, and chestnut.

CORYLUS, *Linn.* From *korys*, a helmet; referring to the calyx enveloping the fruit. *Linn.* 21, Or. 9, Nat. Or. *Corylaceae*. The species of this genus are generally cultivated for the sake of their fruit; they will thrive well in any common garden soil, and may be raised from seed; but to have any variety true to its kind, they must be raised from suckers or layers.

CORYMB, a raceme or panicle, in which the stalks of the lower flowers are longer than those of the upper, so that the flowers are all on the same level.

CORYMOSELY-CYMOSE, between a corymb and a cyme.

CORYMBOSE, formed of many small corymbs.

CORYNELLA, *De Candolle*. From *koryne*, a club, in reference to the shape of the style. *Linn.* 17, Or. 4, Nat. Or. *Fabaceae*. Interesting shrubs, requiring the same treatment as *Cassia*. *Synonyme*: 1, *Robinia polyantha*.

polyantha 1. Purple 4, S. Ev. S. 5 W. Ind. . . 1824

CORYNÉPHORA, *Agardh*. From *koryne*, a club, and *phoreo*, to bear; the last articulation of the jointed beard is club-shaped. *Linn.* 24,

- Or. 7, Nat. Or. *Fucaceæ*. Curious plants, found growing on the sea-shore. *Synonyme*: 1, *Rivularia tuberiformis*—marina 1.
- CORYNÉPHORUS**, Beauvois. From *koryne*, a club, and *phoros*, to bear; the last articulation of the jointed beard is club-shaped. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. Uninteresting species of grass, requiring only to be sown in common soil. *Synonyme*: 1, *Aira canescens*.
- articulatus . . . Apetal . 7, H. Grass. $\frac{1}{2}$ S. Eur. . 1816
canescens 1.
- CORYNEUM**, Nees. So called from *koryne*, a club; in allusion to the form of the plants. *Linn.* 24, Or. 8, Nat. Or. *Uradinaceæ*. Very minute species of *Fungi*, discernible upon old decaying branches—*macrospodium*, *puberulum*.
- CORYNOCARPUS**, Forster. This name is derived from *koryne*, a club, and *karpos*, a fruit; in reference to the form of the seed-vessel. *Linn.* 5, Or. 1, Nat. Or. *Myrsinaceæ*. An ornamental plant, of easy culture and propagation.
- levigatus . . . G. Ev. T. 20 N. Zeal. . 1823
- CORYPHA**, *Linn.* From *koryphe*, the summit; the leaves are only on the top of the trees. *Linn.* 6, Or. 1, Nat. Or. *Palmaceæ*. This is a beautiful genus of the palm tribe, growing in their native country from fifteen to one hundred and fifty feet high; they should have a strong moist heat, and a sandy loam to grow them well. See *Chamærops*, *Sabal*, and *Palmera*.

COSMELLA, *R. Brown*. From *kosmeo*, to adorn; in reference to the beauty of the flowers. *Linn.* 5, Or. 1, Nat. Or. *Epacridaceæ*. This is a pretty plant, growing about a foot and a half high; it succeeds best in a sandy peat soil, and may be increased freely from cuttings in the same compost.

rubra . . . Red . 5, G. Ev. S. 1 $\frac{1}{2}$ N. Holland . 1826

COSMÉTIC, beautifying.

COSMIDIUM, See *Coreopsis*.

CÓSMOS, *Cavanilles*. From *kosmos*, beautiful; in allusion to the appearance of the species. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. This is a genus of very beautiful plants, well deserving of extensive cultivation. The flowers are not very much unlike those of a single dahlia, to which the genus bears a close resemblance; and the perennial species requires exactly the same treatment. *C. tenuifolius* being an annual, the seeds must be sown on a hotbed early in spring, and planted out in the flower-garden about the end of May; but a few plants should be kept in the greenhouse, from which the seeds should be gathered. See *Cosmea*.

CRAKE BERRY. See *Empetrum*.

CRÁMBE, Tournefort. The Greek name for Sea-kale, or Sea-cabbage. *Linn.* 15, Nat. Or. *Brassicaceæ*. Some of the species are much valued, and cultivated as vegetables. They require a good rich soil, and may be increased by dividing the roots, or by seed. See *Sobolewska*.

cordifolia . . . White . 5, H. Tu. P. 4 Caucasus . 1822
 maritima . . . White . 5, H. Tu. P. 1½ Brit., sea sho.
 tartarica . . . White . 6, H. Tu. P. 3 Siberia . 1754

áspera, filiformis, fruticosa, hispánica, orientalis, pinnatifida, reniformis, strigosa.

CRANBERRY. See *Oxycoccus palustris*.

CRANBERRY OF TASMANIA. See *Astróloma humifusa*.

CRANE'S-BILL. See *Geranium*.

CRÁNICHIS, Swartz. From *kranos*, a helmet; the form of the flower. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. A pretty little orchid, requiring similar treatment to *Bletia*.

muscosa . . . Wh. gr. . 7, S. Ter. ½ Jamaica . 1845

CRANIOLÀRIA, Linn. Derived from *kranion*, a skull; on account of the fancied resemblance in the capsules. *Linn.* 14, Or. 2, Nat. Or. *Pedaliaceæ*. A greenhouse species, growing about two feet high, and succeeding in any light sandy soil, in which it merely requires sowing. *Synonyme*: 1, *Martynia craniolaria*.
 ánnua 1 . . . White . 7, G. A. 1½ S. Amer. . 1733

CRANIÓTOME, Don. Derived from *kranion*, a helmet, and *temno*, to cut. *Linn.* 14, Or. 1, Nat. Or. *Lamiaceæ*. See *Anisómeles*.

CRASPEDIA, Forster. Derived from *craspedon*, a fringe; in allusion to the flowers. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. Curious plants, preferring a light loamy soil, and propagated readily by cuttings in sand, under a glass. *Synonymes*: 1, *Richia glauca*; 2, *Richia glauca*, *C. pilosa*, *Podosperma pedunculare*, *C. glauca*.
 glauca 1 . . . Yellow 4, H. Her. P. 1½ N. Holl. 1836
 macrocephala Yeh. w. 4, F. Ev. P. 1½ V. D. L. 1834

CRASSULACEÆ. An order of succulent herbs and shrubs of considerable beauty. Many are found in the driest situations where not a blade of grass or a moss could live, and will bear the fiercest rays of the mid-day sun without injury.

CRATÆGUS, Linn. From *kratos*, strength; in allusion to the strength and hardness of the wood. *Linn.* 12, Or. 2, Nat. Or. *Pomacœæ*. A very ornamental genus, chiefly composed of low, hardy trees, or shrubs. Young plants may also be multiplied by buds, or grafts. *Synonymes*: 1, *C. glandulosa*; 2, *C. indentata*; 3, *C. coccinea spinosa*; 4, *Mespilus linearis*; 5, *M. nana*; 6, *Cratægus lobata*; 7, *Pyrus cratægifolia*; 8, *Cratægus Oliveriana*; 9, *C. lacinata*; 10, *C. edulis*; 11, *C. incisa*; 12, *C. Celsiana*; 13, *Mespilus crenulata*; 14, *Lesnea, tanacetifolia Celsiana*; 15, *Cratægus apitifolia*; 16, *Mespilus Constantino-politana*; 17, *Cratægus macrantha*; 18, *C. subvillosa*; 19, *C. orientalis*; 20, *C. sibirica, C. monogyna*; 21, *C. edulis*; 22, *C. stricta*; 23, *C. virginiana*.

CRATÆVA, *Linn.* After *Cratævus*, a Greek botanist, who lived in the time of Hippocrates. *Linn.* 11, Or. 1, Nat. Or. *Cappari-dæcæ*. Ornamental stove trees, growing from twelve to twenty feet high; they prefer a rich strong soil, and may be propagated by cuttings in sand, under a glass, in heat. *Synonymes*: 1, *Capparis trifoliata*; 2, *C. trifoliata*. See *Niebuhrria*, and *Richiæa*.

CRATÆRIUM, *Trentepohl*. Derived from *krater*, a cup; in reference to the form of the peridium. *Linn.* 24, Or. 9, Nat. Or. *Lycoper-dæcæ*. Curious minute species, found growing on mosses in damp places. *Synonyme*: 1, *Cyathus minutus*—leucocéphalum, mutabile, pyriforme, vulgare 1.

CRAWFURDIA. See *Gentiàna*.

CREAM FRUIT. See *Roupellia grata*.

CREeping, spread upon the ground, and rooting at the joints.

CREeping FLORIN. See *Agròstis stolonifera*.

CREMOCÉPHALUM, *De Candolle*. From *kremao*, to suspend, and *kephale*, a head. *Linn.* 9, Or. 2, Nat. Or. *Asteræcæ*. See *Senecio*.

CREMÓLOBUS, *De Candolle*. From *kremao*, to suspend, and *lobos*, a pod; in allusion to the silicles hanging from the axis. *Linn.* 15, Or. 1, Nat. Or. *Brassicæcæ*. An annual species suited for rock-work, growing freely in any light soil.

chilensis . . . Yellow . 6, H. A. $\frac{1}{2}$ Chili . 1820

CRENATE, having round notches.

CRENULATE, having small round notches.

CREPIDARIA. See *Pedilánthus*.

CRÈPS, *Linn.* A name given to a plant by Pliny, of which he gave no description. *Linn.* 19, Or. 1, Nat. Or. *Asteræcæ*. Uninteresting species, succeeding in any common border soil, in which they merely require sowing. *Synonymes*: 1, *C. Gmelini*; 2, *Prenánthes hieracifolia*; 3, *Lagòseris taurinensis*; 4, *C. graminifolia*. See *Andryala*, *Borkhuasia*, *Hapalostèphium*, *Lagòseris*, *Picridium*, *Picris*, *Rodigia*, and *Tòlpis*—*agrèstis*, *bannatica*, *biennis*, *cèrnu*, *chondrilloides*, *cinèrea*, *corymbosa*, *croatica*, *diffusa*, *Dioscòridis*, *heterospèrma*, *hieracioides*, *lácera*, *latifolia*, *lodomiriensis*, *macrorhiza*, *multicaulis*, *neglecta*, *parviflora*, *pinnatifida*, *pòntica*, *pùlchra* 2, *rhagadioloides*, *rigens*, *rigida*, *scàbra*, *setosa*, *segetum*, *Sprengèriana*, *taurinensis* 3, *tectòrum*, *tenuifolia* 4, *virens*.

CRESCÈNTIA, *Linn.* In memory of Pietro Crescenti, of Bologna, an agricultural author of the sixteenth century. *Linn.* 14, Or. 2, Nat. Or. *Crescentiæcæ*. A genus of handsome stove trees; they will thrive in a mixture of loam and peat, and cuttings of the ripened wood root freely in sand, in heat. *Synonyme*: 1, *Ferdinàndea superba*. See *Tandècium*.

acuminata . Grn. wht. 5, S. Ev. T. 15 Cuba . 1822
acurbitina . White . 5, S. Ev. T. 10 W. Ind. 1783
Cujète . . . White . 5, S. Ev. T. 15 Jamaica. 1690
macrophylla Pa. grn. 12, S. Ev. S. 10 S. Amer. 1852

CRESCÈNTIÆCÆ or **CRESCÈNTIADS**. Trees of small size, growing only in the tropics. The Calabash tree and some others bear eatable fruit.

CRESS. See *Lepidium sativum*.

CRESS ROCKET. See *Vèlla*.

CRÈSSA, *Linn.* From *cressa*, a native of Crete; the plant is plentiful there. *Linn.* 5, Or. 2, Nat. Or. *Convolvulæcæ*. This is a curious annual, growing about six inches high, and should be sown in sandy peat.

crètica . . . Purple . 7, H. Tr. A. $\frac{1}{2}$ Levant . 1822

CREST, applied to some elevated appendage, terminating a particular organ; a stamen is crested when the filament projects beyond the anther, and becomes dilated.

CRETACÉOUSLY-PRUINOSE, covered with white glittering spots, or pustules.

CRETAN CARROT. See *Athamànta crètica*.

CREYAT. See *Justicia paniculata*.

CRIBRÀRIA, *Schrader*. From *cribrum*, a sieve; in reference to the upper part of the peridium being perforated. *Linn.* 24, Or. 9, Nat. Or. *Lycoperdæcæ*. Small species, found on pine bark, &c.—*intermèdia*, *microspus*.

CRIBRIFORM, riddled with holes, like a sieve.

CRIMSON-GRASS. See *Lathyrus Nissòlia*.

CRINTUS, hairy, having long hairs.

CRINUM, *Linn.* From *krinon*, the Greek name of the lily. *Linn.* 6, Or. 1, Nat. Or. *Amaryllidæcæ*. This is a fine genus of bulbous plants; many of the species are very beautiful. The flowers of most of them are delightfully fragrant, and are produced freely in large umbels. They prefer a mixture of rich loam, peat, and sand, and are increased by offsets, which are produced in abundance. *Synonymes*: 1, *C. superbum*; 2, *campanulatum*; 3, *toxicarium*; 4, *brevifolium*; 5, *Amaryllis longifolia*; 6, *C. capense*, *viridiflorum*; 7, *A. ornata*; 8, *C. rubro-limbo*; 9, *A. australasica*; 10, *A. giganteum*; 11, *A. revoluta*, *C. revolutum*; 12, *A. insignis*; 13, *A. moluccana*; 14, *A. zeylanica*.

GARDEN HYBRIDS.—*amätüm, bulbösüm, candidüm, Cooperi, cupitüm, diversüm, egrëgium, elongätüm, erectüm, felix, fertile, flaccidülüm, Govenianüm, Herbertainüm, Highclerianüm, ingens, microspermüm, miräbile, modestüm, prestans, promissüm, pudicüm, pälchrum, quadrilöpez, rubricaulë, tortuosüm, vittätüm, &c.*

CRISP, curled, much undulated.
 CRISTA. See *Cesalpinia Crista*.
 CRISTA GÄLLI. See *Rhinanthus Crista-gälli* and *Erythrina Crista-gälli*.
 CRISTÄRA, *Cavarnilles*. From *crista*, a crest;

in reference to the form of the capsules. *Linn.* 16, Or. 8, Nat. Or. *Malvaceæ*. A pretty little hardy herbaceous plant, requiring to be planted in peat soil to thrive; it may be increased by division or seeds. *Synonyme*: 1, *Mälva cocinea*.

coccinea 1 . . . Scarlet 8, H. Her. P. ½ Missouri . 1811

CRISTATE, crested, tufted.
 CRITHMUM, *Tournefort*. Derived from *crithhe*, barley; in allusion to the singularity of the seeds. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. Curious species, not succeeding well under any cultivation. Sandy or gravelly soil is best for them, with a plentiful supply of water, to which a little soda should be added now and then; increased by division. *Synonyme*: 1, *Tendria canadensis*.

latifolium 1 . . . Yellow 7, G Her. P. 1 Canaries 1780
martinum . . . White 8, H. Her. P. 1½ Britain, sea c.

CRITONIA. See *Kühnia*.

CROCODYLIUM. See *Centaurea Crocodylium*.

CROCUS, *Linn.* A Chaldean name, applied by Theophrastus. *Linn.* 3, Or. 1, Nat. Or. *Iridaceæ*. This is a well-known and much-admired genus. The species and varieties are very pretty and ornamental in flower-beds, borders, &c. They will grow well in any light sandy soil, and may be increased by offsets or seeds.

The garden varieties of *Crocus* are so exceedingly numerous, and their increase from seed every year is so great, that anything like a list for reference could not be supplied in a botanical catalogue. The names and descriptions of these can be better obtained from the bulb lists of nurserymen, which are published annually.

CROCUS BLIGHT. See *Rhizoctonia Crocorum*.

CROSSÁNDRA, Salisbury. From *krossos*, a fringe, and *aner*, a male, or anther; in reference to the anthers being fringed. *Linn.* 14, Or. 2, Nat. Or. *Acanthaceæ*. Beautiful, free-flowering stove shrubs, succeeding well in any light rich soil, and easily propagated by cuttings in sand. *Synonyme:* 1, *Harráchia speciosa*, *Ruellia infundibuliformis*.

undulata 1 Or. Scar. 3 S. Ev. S. 1½ E. Ind. . . 1800
flava . . . Yellow. 3, S. Ev. S. 1½ Sierra Leone

CROSS-CORN. See *Zea Cuvagãia*.

CROSSWORT. See *Crucianella*.

CROSSWORT. See *Valentia cruciata*.

CROSTAL. See *Lecandra parvella*.

CROTALÁRIA, Linn. Derived from *krotalon*, a castanet; the seeds are in inflated pods, and rattle when shaken. *Linn.* 16, Or. 7, Nat. Or. *Fabaceæ*. This is a numerous genus, some species of which are very ornamental. *C. júncea* is said to be a valuable fodder; they require a mixture of loam and peat. The perennial kinds may be increased by cuttings in sand, under a glass. The annual and biennial kinds merely require sowing. *Synonymes:* 1, *sericea*; 2, *hirta*; 3, *Trifoliatrum*; 4, *chinensis*; 5, *laevigata*; 6, *stricta*, *anthylloides*; 7, *caerulea*; 8, *incanescens*. See *Hypocalýptus*, *Neurocárpum*, *Oxyrámpsis*, *Ráfria*, *Vascœa*, and *Viborgia*.

angustifolia, arborescens 8, axillaris, benghalensis, biflora, curvata, diffusa, fenestrata, hirta, incana, júncea, laburnifolia, lotifolia, micans, micrantha, nepalensis, orizensis, pallida, parviflora, Paulina, platycarpa, prostrata, pulchella, pulcherrima, pulchra, purpurea, quinquefolia, retusa, rubiginosa, sagittalis, Sathiana, semperflorens, sericea, tetragona, vitellina, albidia, elegans, elliptica, Grahamsi, lanceolata, Leschenaaultii, montana, mysorensis, nana, mummularia, parviflora, platycarpa, Púrshii, sagittalis, spartioides, trichotoma, undulata, virgularis.			
CROTON, Linn. From <i>kroton</i> , a tick; in reference to the resemblance of the seeds. <i>Linn.</i> 21, Or. 10, Nat. Or. <i>Euphorbiaceæ</i> . A genus (with the exception of one or two species) of little interest. The bark of <i>C. Cascarilla</i> is aromatic; and the seeds of <i>C. Tiglium</i> are purgative. They will all succeed in a mixture of three parts loam and one peat; and cuttings, with the leaves left on, root freely in sand, under a glass, in heat. <i>Synonymes:</i> 1, <i>digitata</i> ; 2, <i>Aleurites ámbinux</i> . See <i>Euphorbia</i> , <i>Rottlera</i> , <i>Crotophora</i> , and <i>Codicæum</i> .

CROW BERRY. See *Empetrum nigrum*.

CROWEA, Smith. In honour of James Crow, of Norwich, an excellent British botanist, and a great collector of willows. *Linn.* 10, Or. 1, Nat. Or. *Rutaceæ*. Delightful greenhouse shrubs, producing their beautiful purple flowers throughout the greatest part of the year; they succeed in loam and peat, and cuttings root freely in sand, under a glass.

latifolia . . .	Purple 7, G. Ev. S.	3 N. S. W. . . .	1825

CROWFOOT. See *Ranunculus*.

CROW'S-FOOT. See *Echinochloa cras corvi*.

CROWNED, terminated by anything.

CROWN OF THE FIELD. See *Agrostemma*.

CROWSILK. See *Conserva*.

CROZOPHORA, Necker. The meaning is not explained. *Linn.* 21, Or. 10, Nat. Or. *Euphorbiaceæ*. An annual species, of simple culture, succeeding in any light soil. The preparation called turnsol is chiefly obtained from this plant. *Synonymy*: 1, *Craton tinctoria*.
 tinctoria 1. Wht. grn 7, H. A. 3 S. Eur. . 1570

CRUCIANÉLLA, Linn. A diminutive of *crux*, a cross; alluding to the leaves being placed crosswise. *Linn.* 4, Or. 1, Nat. Or. *Galiaceæ*. The greenhouse species of this genus grow freely in a mixture of loam and peat, and may be increased by cuttings; the annual kinds merely require sowing in the open border.

CRUIKSHÁNKIA. See *Balbisia*.

CRUPINA, Cass. Derivation unknown. *Linn.* 19, Or. 3, Nat. Or. *Asteraceæ*. See *Centauræa*.

CRÛSEA, De Candolle. In honour of G. Cruse, M.D., who wrote on the Cape Rubiaceous plants. *Linn.* 4, Or. 1, Nat. Or. *Cinchonaceæ*. See *Spermaceæ*.

CRÛS-GÁLLI. See *Cratægus Crás-gállí*.

CRÛX-ANDRÉE. See *Ascyrum Crúx-Andrée*.

CRÛBE, Lindley. From *krubeis*, concealed; in allusion to the manner in which the column is hidden by the floral envelopes. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. This plant is only remarkable for never expanding its singular, club-shaped, rose-coloured flowers. It requires the same treatment as *Blétia*.

rösea . . .	Rose . 6, S. Ter.	1 Mexico . . .	1834
-------------	-------------------	----------------	------

CRÛPSIS, Aiton. From *krypto*, to conceal; referring to the flowers being concealed among the leaves. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. Uninteresting species of grass, merely requiring to be sown in any common soil. *Synonymy*: 1, *Helechloa alopecuroides*, *Phalaris crypsoides*—*aculeata*, *alopecuroides* 1, *schœnoides*.

CRYPTANÈNIA, Meisn. From *kryptos*, hidden. *Linn.* 8, Or. 1, Nat. Or. *Thymelæceæ*. See *Passerina*.

CRYPTÁNDRA, Smith. From *kryptos*, hidden, and *aner*, a man; alluding to the stamens being concealed. *Linn.* 5, Or. 1, Nat. Or. *Rhamnaceæ*. A singular genus; the species grow well in sandy peat, and young plants may be obtained from cuttings.

CRYPTÁNTHA, Don. From *kryptos*, hidden, and *anthos*, a flower; flowers inconspicuous. *Linn.* 5, Or. 1, Nat. Or. *Boraginaceæ*. Hardy annuals, growing freely in common soil.

glomerata . . .	Wht. blue 6, H.	A. 1 Chili . . .	1836
microcarpa . . .	Blue . . 6, H.	A. 1 Chili . . .	1836

CRYPTARRHÈNA, R. Brown. From *kryptos*, hidden, and *arren*, a male. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. The small, yellowish-green flowers of this species are produced on a loose spike. For culture and propagation, see *Blétia*.

lunata . . .	Yelsh. grn. 5, S. Epi.	½ Jamaica . . .	1815
--------------	------------------------	-----------------	------

CRYPTOCÁRYA, R. Brown. From *kryptos*, hidden, and *karya*, a nut; alluding to the fruit being covered. *Linn.* 9, Or. 1, Nat. Or. *Lauraceæ*. Greenhouse shrubs, growing about six-

- teen feet high; they will succeed in sandy peat, and plants may be obtained from cuttings.
- glaucescens* . Wht. yel. 4, G. Ev. S. 16 N. Holl. 1818
obovata . . Wht. yel. 4, G. Ev. S. 16 N. Holl. 1820
- CRYPTOCHILUS**, *Wallich*. From *kryptos*, hidden, and *cheilos*, a lip; the labellum is not easily seen, on account of the contraction of the mouth of the calyx. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. A very interesting species, well worth a place in every collection of orchideous plants. It produces its brilliant scarlet flowers on a one-sided spike. For culture and propagation, see *Stanhöpea sanguinea* . . Scarlet. 6, S. Epi. 1 Nepal . .
- CRYPTOCORYNE**, *Fischer*. From *kryptos*, hidden, and *koryne*, a club; shape of flowers. *Linn.* 21, Or. 2, Nat. Or. *Araceæ*. A stove perennial, of easy culture, growing in rich loam, and requiring abundance of water whilst in a growing state, but to be kept nearly dry when in a state of rest. *Synonyme*: 1, *Ambrosinia ciliata*. See *Arum*.
ciliata 1. . Grn. pur. 5, S. Her. P. 1 E. Indies . 1824
- CRYPTOGAMIA**. An extensive Linnæan class of flowerless plants, as ferns, mosses, lichens, fungi, &c.
- CRYPTOGRAMMA**, *Brown*. From *kryptos*, hidden, and *gramme*, writing. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceæ*. *Synonyme*: *Allosorus acrostichoides*. See *Allosorus*.
acrostichoides Pa. yel. 7, H. Her. P. ½ N. Amer. 1827
- CRYPTOLEPIS**, *R. Brown*. From *kryptos*, hidden, and *lepis*, a scale; in reference to the seeds. *Linn.* 5, Or. 1, Nat. Or. *Apocynaceæ*. An interesting climbing species, growing well in a mixture of peat and loam, and multiplied by cuttings under a glass, in sand.
elegans . . Pink . 6, S. Ev. Tw. 6 Brazil . . 1824
- CRYPTOMERIA**, *D. Don*. From *kryptos*, hidden, and *meris*, a part. *Linn.* 21, Or. 3, Nat. Or. *Pinaceæ*. *C. japonica* is the Japan cedar—a fine perfectly hardy tree; it grows tall and upright, with a large pyramidal head. The timber is good, and used for cabinet work by the Japanese. The same treatment applies as for *Araucaria*, and increase is by seeds. *Synonyme*: 1, *Cupressus japonica*.

- CRYPTOMYCES**, *Greville*. Derived from *kryptos*, hidden, and *mikes*, a small fungus; alluding to the smallness of the plants. *Linn.* 24, Or. 9, Nat. Or. *Helvellaceæ*. A curious species found on willow branches—*Waichii*.
- CRYPTOPHRAGMIUM**, *Esenbeck*. *Linn.* 2, Or. 1, Nat. Or. *Acanthaceæ*. See *Justicia venusta*.
- CRYPTOSANUS**, *Scheide*. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*.
scriptus . . Grn. red . 5, S. Epi. ½ Brazil . . 1841
- CRYPTOSPERMUM**, *Persoon*. From *kryptos*, hidden, and *sperma*, a seed; in allusion to the seeds being concealed in the involucreum. *Linn.* 4, Or. 1, Nat. Or. *Cinchonaceæ*. A plant of little merit, growing freely, and increased by cuttings. *Synonyme*: 1, *Opercularia paleata*—Youngii 1.
- CRYPTOSPHERIA**, *Grev*. From *kryptos*, hidden. *Linn.* 24, Or. 9, Nat. Or. *Helvellaceæ*. See *Sphæria* for species.
- CRYPTOSTEGIA**, *R. Brown*. From *kryptos*, concealed, and *stega*, a covering; referring to the corona being concealed within the tube of the corolla. *Linn.* 5, Or. 2, Nat. Or. *Asclepiadaceæ*. Beautiful climbing plants, succeeding in a mixture of loam and peat; and cuttings will root freely in sand, under a glass, in heat.
grandiflora . . Pink 6, S. Ev. Tw. 6 India . . 1818
madagascariensis Pink 7, S. Ev. Tw. 8 Madag. . 1826
- CRYPTOSTEMMA**, *R. Brown*. From *kryptos*, hidden, and *stemma*, a crown; the crown of the grains being concealed in wood. *Linn.* 19, Or. 3, Nat. Or. *Asteraceæ*. Annual species, requiring to be sown in a gentle hotbed, and, when of a sufficient strength, planted out in the open borders, where they will flower, and look very well.
calendulaceum . Yellow 7, H. A. 1 C. G. H. 1752
hypochondriacum Yellow 7, H. A. 1 C. G. H. 1731
runcinatum . . Yellow 7, H. A. 1 C. G. H. 1794
- CRYPTOSTYLIS**, *R. Brown*. From *kryptos*, hidden, and *stylos*, a style. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. The species of this genus are curious, and succeed best in an equal mixture of turfy loam, peat, and sand; divisions.
erecta . . . Drk. brn. 6, G. Ter. 1 N. Holl. . 1824
longifolia . . Drk. brn. 6, G. Ter. 1 N. Holl. . 1822
- CRYSTALLINE**, resembling crystals.
- CUBÆA**, *Mig*. A small genus of plants, nearly related to *Piper*. *Linn.* 2, Or. 1, Nat. Or. *Piperaceæ*. They are plants of no beauty, and their treatment is the same as *Piper*—*canina*, *officinalis*, *Wallichii*.
- CUBEB PEPPER**. See *Cubæa*.
- CUBES**. See *Uvária*.
- CUBICUS**, cubical, die-shaped.
- CUCIFERA**. See *Hypphena coriacea*.
- CUCKOLD**. See *Corylus rostrata*.
- CUCKOLD TREE**. See *Acacia cornigera*.
- CUCKOO BUD**. See *Ramunculus bulbosus*.
- CUCKOO-FLOWER**. See *Lychnis flos cuculi*.
- CUCKOO-FLOWER**. See *Cardamine pratensis*.
- CUCUBALUS**, *Gærtner*. Altered from *Cacobolus*, which is derived from *kakos*, bad, and *bolos*, a shoot; meaning a plant which is destructive to the soil. *Linn.* 10, Or. 3, Nat. Or. *Caryophyllaceæ*. A common plant, of little interest, thriving in any common soil, and increasing either by seeds, or division. See *Silene*.—*bacifer*.
- CUCULLARIA**. See *Vochysia*.
- CUCULATE**; a leaf is cucullate when its edge is curved inwards, so as to resemble the cowl of a monk.
- CUCUMBER**. See *Cucumis*.
- CUCUMBER TREE**. See *Magnolia acuminata* and *Averrhoa Bilimbi*.
- CUCUMIS**, *Linn*. Derived from *curvus*, crooked; referring to the shape of the fruit. *Linn.* 21, Or. 10, Nat. Or. *Cucurbitaceæ*. This is a well-known and extensively cultivated genus, chiefly

for culinary purposes. The *C. colocynthis* produces the colocynth of the shops. The whole of the species require to be sown in a hotbed, and, when of sufficient size and strength, to be planted out in frames, or under hand-glasses, in a good rich soil. *Synonymes*: 1, *Láffa acutangula*; 2, *Cucúrbita citrullus*; 3, *C. glossularioides*; 4, *C. odoratissimus*. See *Láffa* and *Trichosanthes*.

CUCURBITACEÆ or **CUCURBITS**. A large order of showy trailing plants, chiefly annual and perennial; the cucumber and melon may be taken as types of the order.

CUCURBITÀRIA, *Gray*. So named from the form of the sporules. For species, see *Sphèria*.

CUJÈTE. See *Crescèntia Cujète*.

CULCÀSIA, *Beaur.* Derivation unknown. *Linn.* 21, Or. 7, Nat. Or. *Aracèæ*. *Synonyme*: 1, *Denhàmia scàndens*, *Calladium scàndens*. scàndens 1. White 6, S. Ev. Cl. 6 Guinea . 1822

CULCÍTIUM, *Humboldt & Bonpland.* From *culcita*, a stuffed bed; referring to the heads of paleæ. *Linn.* 19, Or. 1, Nat. Or. *Asteracèæ*. An ornamental greenhouse plant, growing well in any common soil, and propagated by cuttings. *Synonyme*: 1, *Cacalia salicina*. salicium 1. Yellow 6, G. Ev. S. 6 N. Holl. . 1820

CUDBEAR. See *Lecandra tartàrica*.

CUELLÀRIA. See *Olethra*.

CUJUMARY BEANS. See *Ladurus*.

CULILÀBAN. See *Cinnamòdum Culilàban*.

CULILAWAN BARK. See *Cinnamòdum*.

CULLÙMIA, *R. Brown.* In honour of Sir Thomas Cullum, Bart., F.L.S., a great promoter of botany. *Linn.* 19, Or. 3, Nat. Or. *Asteracèæ*. Curious species, growing well in a mixture of peat and loam, and cuttings will strike root in soil, under a glass, in heat.

ciliaris . . .	Yellow 5, G. Ev. S. 2	C. G. H. . .	1774
setosa . . .	Yellow 7, G. Ev. S. 2	C. G. H. . .	1780

tenella . . .	Blue . 11, F. Bu. P. 3	Chile . . .	1829
trimaclata . . .	Blue . 12, F. Bu. P. 3	Chile . . .	1829

CUMULATE, heaped, overflowed.

CUNEATE, wedge-shaped.

CUNEIFORM-OVATE, between wedge-shaped and egg-shaped.

CUNILA, *Linn.* The derivation of this word is doubtful; by some botanists it is supposed to be from *konos*, a cone, and by others, to be from *Cunila*, the name of a town. *Linn.* 2, Or. 1, Nat. Or. *Lamiacèæ*. Pretty species. *C. cocinea* requires the heat of a greenhouse, and will succeed in a mixture of loam and peat. *C. maridana* will thrive in the open border, in any common soil; they may both be increased by division. *C. maridana* is used beneficially in slight fevers and colds, with a view to excite perspiration.

cocinea . . .	Scarlet 9, G. Her. P. 1	N. Amer. . .	1823
maridana . . .	Red . 9, H. Her. P. 1	N. Amer. . .	1759

CUNNINGHAMIA, *Richard*. In honour of J. and A. Cunningham, botanists and travellers in New South Wales. *Linn.* 21, Or. 10, Nat. Or. *Pinaceæ*. This is a very handsome species; it succeeds best in a mixture of peat and loam, and may be propagated by cuttings or seeds. It will grow freely planted out in a warm situation, if protected during the winter from severe frost. *Synonyme*: 1, *Pinus lanceolata*, *Bélis jaculiflora*, *C. lanceolata*, *sinensis* 1. . . Apetal. 5, G. Ev. T. 20 China . 1804

CUNONIA, *Linn.* In honour of John Christian Cuno, of Amsterdam, who described his own garden in verse, in 1750. *Linn.* 10, Or. 2, Nat. Or. *Cunoniaceæ*. An ornamental greenhouse tree, attaining a height of twenty feet; it prefers a mixture of sandy loam and peat, and cuttings root in sand, under a glass, in heat. *capensis* . . . White . 8, G. Ev. T. 20 C. G. H. . 1816

CUNONIACEÆ, or **CUNONIADS**. An order consisting of trees and shrubs, natives of the East Indies, South America, the Cape, and Australia. Many of them are exceedingly pretty.

CUP, anything in the shape of a cup.

CUPANIA, *Plumier*. In memory of Father Francis Cupani, an Italian monk, and botanical author, who died in 1710. *Linn.* 10, Or. 1, Nat. Or. *Sapindaceæ*. An ornamental stove genus. The species vary in height from six to twenty feet; they flourish in a mixture of equal parts peat and loam, and young plants may be obtained from cuttings, under a glass, in sand. *Synonymes*: 1, *Molinia canescens*; 2, *Stadmannia australis*.

CUPHEA, *Jacquin*. Derived from *kuphos*, curved; in reference to the form of the capsule. *Linn.* 11, Or. 1, Nat. Or. *Lythraceæ*. This is rather a pretty genus; the stove species require to be grown in sandy loam, and are propagated by cuttings. The annual kinds should be raised in a gentle hotbed, and when strong enough, may be potted off, and kept in the greenhouse. *Synonymes*: 1, *Melvillea speciosa*; 2, *C. ignea*; 3, *C. pubiflora*.

CUPIA, *De Candolle*. *Cupi* is the Malabar name of one of the species. *Linn.* 5, Or. 1, Nat. Or. *Cinchonaceæ*. The species of this genus deserve to be in every collection of plants, being very showy when in blossom, and the flowers very fragrant. For culture and propagation, see *Rondeletia*. *Synonymes*: 1, *Wibera coriacea*; 2, *W. corymbosa*; 3, *W. cymosa*.

CUPRESSUS, *Linn.* From *kuo*, to produce, and *parisis*, equal; in reference to the branches being regular. *Linn.* 21, Or. 10, Nat. Or. *Pinaceæ*. The species comprising this genus are handsome, evergreen trees, varying in height from ten to forty feet. The hardy kinds are beautiful ornaments for lawns, grass-plots, &c. They prefer a good, rich, loamy soil, and are generally multiplied by seeds; but cuttings may be made to root, under a glass, in the shade. *Synonymes*: 1, *glauca*; 2, *Thuja spheroides*; 3, *C. Lambertiana*; 4, *pendula*; 5, *Chamaecyparis Boursieri*. See *Schubertia*, *Taxodium*, *Arucaria*, *Bidda*, *Cryptomeria*, *Frenela*, and *Widdringtonia*.

CUPREUS, copper-coloured.

CUPULA, the cup of an acorn, and such-like fruits.

CUPULATE, shaped like a cup, or a reversed bell.

CURAGUA. See *Zea Curagua*.

CURATELLA, *Linn.* From *kuuro*, to shave; in reference to the leaves being used in Guiana for polishing bows, sabres, &c. *Linn.* 13, Or. 2, Nat. Or. *Dilleniaceæ*. Stove shrubs of some beauty, succeeding in sandy loam, and cuttings, made of the ripened wood, root freely in sand, under a glass.

alata . . . White . S. Ev. S. 6 Guiana.
americana . . . White . S. Ev. S. 6 S. Amer.

CÚRCAS. See *Jatropha Cárcas*.

CURCÚLIGO, Gaertner. Derived from *curculio*, a weevil; the seeds have a process resembling the beak of that animal. *Linn.* 6, Or. 1, Nat. Or. *Hypoxidææ*. Pretty, herbaceous species, succeeding in a mixture of loam and peat, and increased by offsets.

CÚRCUMA, Linn. Derived from *kurkum*, its Arabic name. *Linn.* 1, Or. 1, Nat. Or. *Zingiberææ*. Interesting species, thriving well in a rich, light soil, and increased by offsets, from the root. Turmeric is obtained from *C. longa*; it is cordial and stomachic, and considered by the native doctors of India an excellent application in powder for cleansing foul ulcers. A kind of arrow-root is prepared from *C. angustifolia*.

CURRENT-WORTS. See *Grossulariææ*.

CURRENT. See *Ribes* and *Vitis*.

CURTA, broken off, curtailed.

CURTISIA, Aiton. In honour of the late William Curtis, the founder of the Botanical Magazine. *Linn.* 3, Or. 1, Nat. Or. *Cornææ*. This, in its native country, is a timber tree, attaining the height of eighty feet, and from which the Hottentots and Caffres make the shafts of their javelins. It succeeds in loam and peat, and cuttings strike readily in sand.

faginea . . .	Pale . 4, G. Ev. T. 35.	C. G. H. . 1775
---------------	-------------------------	-----------------

CURTÓGYNE, Haworth. From *kurtos*, curved, and *gynæ*, a style; referring to the gibbous ovaria. *Linn.* 5, Or. 5, Nat. Or. *Crassulææ*. Greenhouse species, flourishing in sandy loam, and propagated by cuttings, which should be laid a few days in the sun to dry. *Synonyme*: 1, *Crassula undata*.

undata 1 . . .	White . 8, G. Ev. S. 1	C. G. H. . 1818

CUSSONIA, Thunberg. In honour of Pette-Cusson, a celebrated French botanist, and professor at Montpelier. *Linn.* 5, Or. 2, Nat. Or. *Arabiææ*. Greenhouse shrubs, succeeding well in a mixture of peat and loam, and cuttings root freely in sand, under a glass.

spicata . . .	Green . 6, G. Ev. S. 6	C. G. H. . 1789
thyrsoïdora . . .	Green . 6, G. Ev. S. 6	C. G. H. . 1795
tripteris . . .	Green . 6, G. Ev. S. 4	C. G. H. . 1816

CUSTARD APPLE. See *Anona*.

CUTANEOUS, relating to the skin.

CUTICLE, the scarf skin, or epidermis.

CUT-TOOTHED, cut and toothed at the same time.

CYAMÓPSIS, De Candolle. From *kyamos*, a bean, and *opsis*, resemblance; on account of the plant resembling a bean. *Linn.* 16, Or. 6, Nat. Or. *Fabææ*. An annual species, of some beauty, growing freely in any common soil. *Synonymes*: 1, *Dolichos psoraleoides*, *D. fabæformis*, *Psoralea tetragonolobus*, *Lupinus trifoliolatus*.

psoraleoides 1 . . .	Purple . 7, H. A. 1	Arabia . 1813
----------------------	---------------------	---------------

CYAMUS. See *Nelámbium speciosum*.

CYANÁNTHUS, Wallich. From *kyanos*, blue, and *anthos*, a flower. *Linn.* 5, Or. 1, Nat. Or. *Polemoniææ*. "A delicate hardy little herbaceous plant, with small fleshy roots, like those of some species of Campanula. It grows best in a mixture of sandy heath mould and leaf mould, with plenty of moisture during the growing season, but should afterwards be kept rather dry and allowed to rest." It increases freely by cuttings.

lobatus . . .	Pur. blue 8, H. Her. P. 1	Chinese Tar. 1844
---------------	---------------------------	-------------------

CYANÉLLA, Linn. A diminutive 'of *kyanos*, blue; alluding to the flowers. *Linn.* 6, Or. 1, Nat. Or. *Liliææ*. These are pretty, bulbous plants, thriving in a mixture of sandy loam and peat, and increased by offsets.

alba . . .	White . 7, G. Bu. P. 1	C. G. H. 1819

CYATHUS. See *Craterium*.

CYATTEA. See *Cyathæa*.

CYCADACEÆ or **CYCADS**. An order of small trees or shrubs, sometimes resembling palms in their aspect. Several of the species furnish food to the natives of the countries where they grow.

CYCAS, *Linn.* The Greek name of a palm, said to grow in Ethiopia. *Linn.* 22, Or. 12, Nat. Or. *Cycadaceæ*. This is a fine ornamental genus of stove plants, requiring to be grown in good rich loam, with a liberal supply of water. Young plants may be obtained from suckers, which are sometimes produced. From the soft stem of *C. circinalis* a kind of sago is produced. See *Encephalartes*.

CYCLOBOTHA, *Sweet*. From *kyklos*, a circle, and *bothros*, a pit; alluding to the sepals being circular. *Linn.* 6, Or. 1, Nat. Or. *Liliaceæ*.

Beautiful species of bulbous plants, thriving well in an equal mixture of loam, peat, and sand. They may be readily increased by the little viviparous bulbs that are produced on the upper part of the stem. *Synonymes*: 1, *Fritillaria barbata*; 2, *Cyclobotira barbata*; 3, *Fritillaria purpurea*.

CYCLOGYNE, *Bentham*. From *kyklos*, a circle, and *gyne*, a stigma. *Linn.* 17, Or. 4, Nat. Or. *Fabaceæ*. A profuse flowering Swan River plant, whose blooms are highly beautiful. It is worthy of a place in every collection.

canescens . . . Purple . 5, G. Ev. S. 2 Swan R. .

CYCLOPÉLITIS, *J. Smith*. From *kyklos*, a circle, and *pella*, a buckler. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceæ*. *Synonymes*: 1, *Aspidium semicordatum*; 2, *Lástrea semicordata*.
semicordata . . . Yellow . 7, S. Her. P. 1 W. Ind. . 1822

CYCLŌPIA, *Ventenat.* From *kyklos*, and *pous*, a foot; in allusion to the shape of the base of the pods. *Linn.* 10, Or. 1, Nat. Or. *Fabaceæ*. Greenhouse shrubs, with little to recommend them; they grow freely in a mixture of peat and loam, and propagate freely by cuttings. *Synonymes*: 1, *Sophora galioides*, *Aspálathus callōsa*; 2, *Gemista buxifolia*.

galioides . . . Yellow . . . 7, G. Ev. S. 4 C. G. H. 1820

CYCLŌSIA. See *Mormodes*.

CYCNŌCHES, *Lindley*. From *kyknos*, a swan, and *cuchen*, the neck; in allusion to the column, which is long, and gracefully curved, like the neck of a swan. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. The species of this genus are well worth cultivating, especially *C. Loddigēsi*, which has large and delightfully fragrant flowers. The sepals and petals of this species are of a brownish-green colour, with darker spots, and bearing a strong resemblance to the expanded wings of a bird. They require a strong heat, and a plentiful supply of water when growing, and to be otherwise treated as *Stanhōpeæ*. *Synonyme*: 1, *Acinēda glauca*.

CYDŌNIA, *Tournefort*. Supposed to be named from its being a native of Kydon, in the island of Crete. *Linn.* 12, Or. 2, Nat. Or. *Pomaceæ*. A genus of fruit trees. *C. japonica* is one of the handsomest hardy shrubs, producing its beautiful scarlet or white flowers in great abundance. *C. vulgaris*, the quince, is well known, and cultivated for its fruit. They will thrive in any soil, and may be multiplied by suckers.

Garden varieties.—Of these a few may be named, as *alba odorsans*, *coccinea*, *cardinalis*, *gigantea*, *igneæ*, *nana*, *rubra aurantiaca*, *r. a. semi-pleno*, &c.

CYLINDRICAL, cylinder-shaped, round.

CYLINDRICALLY-GLOBOSE, a form between a cylinder and a sphere.

CYLINDROSPORIUM, *Linn.* From *kyllindros*, a cylinder, and *spora*, a sporule; alluding to the cylindrical-shaped sporule. *Linn.* 24, Or. 9,

Nat. Or. *Uredinaceæ*. A minute species, growing on cabbage leaves—*concentricum*.

CYLĪSTA, *Aiton*. Derived from *kyllia*, a calyx; in allusion to the very large calyx. *Linn.* 17, Or. 4, Nat. Or. *Fabaceæ*. An ornamental climbing genus; the species grow well in a mixture of loam and peat, and cuttings of the young wood root well in sand, under a glass.

CYMATION, *Spreng*. Derivation unknown. *Linn.* 6, Or. 1, Nat. Or. *Melanthaceæ*. See *Lichtensteinia levigata*.

CYMBALARIA. See *Linaria Cymbalaria*.

CYMBARIA, *Linn.* Derived from *kymbe*, a boat; referring to the shape of the fruit. *Linn.* 14, Or. 2, Nat. Or. *Scrophulariaceæ*. This is a curious plant, growing about a foot high, and producing yellow flowers; it will flourish in any common soil, and may be increased by dividing the roots.

dabrica . . . Yellow . . . 6. H. Her. P. 1 Tauria . 1796
--

CYMBELLA, *Agardh*. From *kymbe*, a boat, in reference to the shape of the pustules. *Linn.* 24, Or. 7, Nat. Or. *Diatomaceæ*, or *Brittlenorts*. Small yellowish plants, inhabiting marshy places—*cymbiformis*, *hyalina*, *minor*.

CYMBIDIUM, *Swartz*. From *kymbos*, a hollow recess; in allusion to the labellum. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. Several of the species of this genus are remarkably handsome when in flower, and therefore deserve to be extensively cultivated. The *epiphytal* kinds may be referred to *Stanhōpeæ*, and the *terrestrial*, to *Bledia*, for culture and propagation. *Synonymes*: 1, *C. ensifolium estriatum*; 2, *Maxillaria gracilis*; 3, *Epidendrum pendulum*; 4, *Cyperorchis elegans*. See *Brides*, *Arun-dania*, *Brassavola*, *Cattleya*, *Cirrhaea*, *Dendrobium*, *Govenia*, *Grammatophyllum*, *Isochilus*, *Oberonia*, *Pleione*, and *Vanda*.

CYMBIFORM, boat-shaped.

CYMBOPÖGON, Sprengel. From *kymbe*, a boat, and *pogon*, a beard; the valves of the calyx are boat-shaped. *Linn.* 23, Or. 1, Nat. Or. *Graminææ*. A species of grass, remarkable for its fragrance; loam and peat suits it, in which it merely requires to be sown. *Synonymy* : 1, *Andropogon Schœnânthus*.

Schœnânthus 1. *Apetal* 6, S. Grass. 2 E. Indies. 1786

CYME, a mode of inflorescence resembling a flattened panicle, as that of the *Elder*.

CYMINÔSMA, Gærtner. *Kyminon*, cumin seed, and *osme*, smell; the fruit smells like cumin seed. *Linn.* 8, Or. 1, Nat. Or. *Xanthocyllacææ*. Curious evergreen shrubs. They flourish in a mixture of loam and peat, and cuttings root freely in sand, under a glass. *Synonymes* : 1, *Gêla oblongifolia*; 2, *Jambolifera odorata*; 3, *J. pedunculata*.

CYMINUM. See *Cuminum Cuminum*.

CYMOSE, flowering in cymes.

CYNANCHUM, Linn. From *kuon*, a dog, and *agche*, to strangle; alluding to its poisonous qualities. *Linn.* 5, Or. 2, Nat. Or. *Asclepiadacææ*. Most of the species of this genus are perennial twiners, requiring the heat of the stove, or greenhouse; they may be grown in a good loamy soil, and will readily increase by cuttings. The hardy kinds thrive in any border soil. In Egypt, the leaves of *C. Arghel* are used for adulterating senna. *Synonymes* : 1, *oleifolia*; 2, *Asclepias dahurica*; 3, *A. villosa*; 4, *A. vincetoxicum*. See *Asclepias, Dœmia, Gonolobus, and Sarcostemma*.

CYNOMORIUM or **BALANOPHORACEÆ** are plants of a very singular character, their substance and habits being those of parasitic fungi, but bearing flowers similar to plants of higher orders; all are tropical, and not yet introduced.

CYNORCHIS, *Thouars*. From *kuon*, a dog, and *orchis*, Dog-orchis. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. This species is one of the representatives in tropical countries of the terrestrial Orchises of Europe. It has a smell resembling that of *Orchis máscula*. It succeeds best in sandy loam, in a moist part of the house, and is increased by dividing the roots.

fastigiata . . . Red grn. 3, S. Ter. $\frac{1}{2}$ Is. of France 1835

CYNÓSBATI or **DOG-BRAMBLE**. See *Ribes Cynosbati*.

CYNÓSTRUS, *Beauvois*. From *kuon*, a dog, and *oura*, a tail; from its resemblance to a dog's tail, whence the name dog's-tail grass. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. *C. cristátus* is esteemed one of the best fodder grasses in Europe; it will succeed in any soil. *Synonyme*: 1, *Lamàrckia àiorea*. See *Beckmánnia*, *Chrysóstrus*, *Dactyloctenium*, *Eleusine*, *Rhabdóchloa*, and *Sesleria*.

cristátus . . . Apetal. 8, H. Grass. 2 Brit. meads.
cynosurides 1 Apetal. 7, H. Grass. 2

CYNTHIA, *D. Don*. A title of Diana. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. *Synonymes*: *Hyðseris amplexicaulis*, *Tróacimum virginicum*, *Cynthia virginica*.

amplexicaulis Gold. yl. 7, H. Her. P. $\frac{1}{2}$ N. Amer. 1799

CYPARÍSSIAS. See *Euphórbia Cyparissias*.

CYPÉLLA, *Herbert*. From *kypellon*, a goblet; in reference to the shape of the flowers. *Linn.* 16, Or. 1, Nat. Or. *Iridaceæ*. The species of this genus are rendered ornamental by their beautiful flowers; they delight in sandy peat, and may be multiplied by offsets. *Synonyme*: 1, *Morba Herbérta*, *Tigrídia Herbérta*. See *Phalocállis*.

CYPERACEÆ or **SEDGES** are a large and well-known order of grass-like herbs, but unlike grasses, they supply no nutriment to cattle; some kinds, however, are used for various domestic purposes, and in medicine.

CYPERORCHIS. See *Cymbidium*.

CYPERUS, *Linn.* Supposed to be derived from *Cypris*, a name of Venus, from the roots of some of the species being aphrodisiacal. *Linn.* 3, Or. 1, Nat. Or. *Cyperaceæ*. A genus of grass-looking plants, many of them growing best in water, or in wet situations; any soil suits them, and they may be increased by division. See *Papyrus*.

articulátus, *austrális*, *bræzus*, *carinicus*, *compáctus*, *compressus*, *cruentus*, *difformis*, *divers*, *fasciculáris*, *hydra*, *leucocéphalus*, *tigularis*, *Mónti*, *mucronátus*, *pallescens*, *Pangórei*, *paramatténsis*, *pátens*, *pátulus*, *polycéphalus*, *polystachus*, *prostrátus*, *rigidus*, *tenuiflorus*, *trisulcus*.

CYPHÉLLA, *Fries*. From *kypellon*, a cup. *Linn.* 24, Or. 9, Nat. Or. *Agaricaceæ*. This species is found on decayed grass—*cuticulosa*.

CYPHIA, *Bergius*. From *kypnos*, curved; in reference to the stigma being gibbous. *Linn.* 5, Or. 1, Nat. Or. *Goodeniaceæ*. A pretty genus; the species require a mixture of peat, loam, and sand, and may be increased by taking off the young shoots as they begin to grow, and planting them in sand. The annual species merely require sowing. *Synonymes*: 1, *Lobelia cardamines*; 2, *L. volúbilis*.

CYPHONEMA, *Linn.* 6, Or. 1, Nat. Or. *Amaryllidaceæ*. "A remarkable new genus, of which a live specimen in flower has been sent to Spofforth, by Mr. Loddiges, imported as he states from Valparaiso, being the first cyrtanthiform plant found elsewhere than in South Africa." A shade of doubt has been cast upon the fact of its being a native of the above-mentioned country, Messrs. Loddiges having had many Cape bulbs in the same house with those imported from Chili.

Loddigesianum Grn. str. 5, S. Bl. P. 1 S. Africa 1838

CYPRESS. See *Cupressus*.

CYPRESS-OAK. See *Quercus pedunculata fastigiata*.

CYPRESS OF SOUTH AFRICA. See *Widdringtonia*.

CYPRESS POWDER, as used in France, is made from the dried leaves of *Arum maculatum*.

CYPRESS TURPENTINE. See *Pistacia Terebinthus*.

CYPRIPÉDIUM, *Linn.* From *Cypris*, one of Venus's names, and *podion*, a slipper; hence the name, Venus's, or Ladies' Slipper. *Linn.* 20, Or. 2, Nat. Or. *Orchidaceæ*. The *Cyripediums* are remarkably handsome when in flower, and on that account, they deserve a place in every collection. They are all of the easiest culture. The hardy species succeed well in peat soil, either kept in a frame, or planted out in a shady border. The species, natives of America, require to be protected

from severe frost and rain. The stove kinds require the same treatment as other stove terrestrial Orchidææ. *Synonyme*: 1, *C. hãmile*; 2, *C. javanicum*; 3, *C. Dayii*.

CYRSTYLIS, R. Brown. From *kyrtos*, convex, and *stylos*, a style. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. A very curious genus, succeeding well with the same treatment as is recommended for the genus *Corycium*.

geniferum Yellow . S. Epi. S. Amer. .
reniformis . Yellow . 6 F. Ter. 2 N. Holl. . 1823
Willmorei . Yelsh. red 6, S. Epi. 4 Venezuela 1834

CYSTANTHE, Graham. From *kystis*, a bladder, and *anthos*, a flower; in allusion to the bladder-like form of the flower-buds. *Linn.* 8, Or. 1, Nat. Or. *Eupariaceæ*. A shrub of no great beauty, thriving in sandy loam, and propagated by half-ripened cuttings in sand, under a glass. *sprengelioides* . Yel. wht. 6, G. Ev. S. 1½ V. D. L. 1836

CYSTICÁPNO, Boerhaave. From *kystis*, a bladder, and *kaynos*, a Greek name for fumitory; in allusion to the bladder capsules. *Linn.* 17, Or. 2, Nat. Or. *Fumariaceæ*. Annual species, requiring to be sown in a gentle hot-bed, and afterwards transplanted into the open ground, where they will flower well. *Synonyme*: 1, *Fumaria vesicaria*.

africana 1 . Wht. red 6, H. Cl. A. 2 C. G. H. . 1696
alexandrina Wht. red 6, H. Cl. A. 2 Alexan. . 1827

CYSTIDIÁNTHUS, Harsk. See *Hoya*.

CYSTOPPERIS, Bernh. From *kystis*, a bladder, and *pteron*, a wing. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceæ*. *Synonymes*: 1, *Aspidium alpinum*; 2, *A. bulbiferum*; 3, *A. dentatum*; 4, *A. fragile*; 5, *A. regium*; 6, *A. atomarium*—*alpina* 1, *bulbifera* 2, *dentata* 3, *fragilis* 4, *fumarioides*, *montana*, *regia* 5, *tenuis* 6.

CYTOSEIRA, Agardh. From *kystis*, a bladder, and *seira*, a chain; in reference to the upper parts of the fronds appearing like little bladders chained together. *Linn.* 24, Or. 7, Nat. Or. *Fucaceæ*. Species of sea-weed, found at all seasons of the year in the open ocean—*abrotanifolia, barbata, discors, ericoides, fibrosa, granulata, siliquosa, s. denudata, s. minor*.

CYTTINÁCÆ or CISTUS-RAPES. A small order of most singular parasitical plants, with the habits of a fungus, and the flowers of an endogenous plant.

CÝTINUS, Linn. A most singular genus. *Linn.* 6, Or. 1, Nat. Or. *Cytinaceæ*. These plants cannot very well be cultivated, but placed in a situation where they can attach themselves to the roots of plants, they will, if not dis-

turbed, increase. Several species are known, but only one has been introduced—*hypocistus*.

CYTRISORA, Fries. From *kystis*, a bladder, and *spora*, a spore; the spores appear like little bladders. *Linn.* 24, Or. 9, Nat. Or. *Uredinaceæ*. Minute species, growing on dead branches, leaves, &c.—*carphosperma, chryso-sperma, fagax, guttifer, leucosperma, orbicularis, Rosarum, rubescens*.

CÝTISUS, Linn. Derived from *Cythus*, one of the Cyclades, one of the species being first found there. *Linn.* 16, Or. 6, Nat. Or. *Fabaceæ*. This is a very ornamental genus. The species are fine, hardy, free-flowering trees and shrubs, succeeding in almost any soil, and readily increased by seeds, layers, grafts, or buds. *Synonymes*: 1, *Spartium multiflorum*; 2, *C. pauciflorus*; 3, *Spartium spinosum, villosum*; 4, *C. elongatus*; 5, *Spartium nubigenum*; 6, *S. patens*; 7, *S. spinosum*; 8, *Cýtisis Laburnum incisum*. See *Adenocarpus, Cajanus, Calycótoma, Calophaca, Génista, Goodia, Rhychodia, and Thermopsis*.

CZÁCKIA, *Andrejzouski*. In honour of Andrejzousky Czack, a Russian botanist. *Linn.* 6, Or. 1, Nat. Or. *Liliaceæ*. A pretty species, producing abundance of elegant flowers; it prefers a good rich loam and an open situation. It is readily increased by seeds, or dividing the roots. *Synonyme*: 1, *Anthéricum liliástrum*.
liliástrum 1 . White . 5, H. Her. P. 1½ S. Eur. . 1629

D.

DABOËCIA. See *Menzièsia*.

DACHA. An intoxicating drink, made from the hemp (*Cannabis sativa*), and used by the Hindoos under the name of *Banghe*, by the Turks as *Malach*, and by the Hottentots as *Dacha*.

DACRYDIUM, *Banks*. Derived from *dakru*, a tear; in reference to the gummy exudation. *Linn.* 21, Or. 10, Nat. Or. *Taxaceæ*. These are ornamental plants, resembling the spruce in appearance, except that the branches are somewhat pendulous; hence the English name of *D. cupressinum*, New Zealand Spruce. A mixture of sandy loam and peat suits them, and ripened cuttings root in sand, under a glass. *Synonymes*: 1, *Thalâmia cupressina*; 2, *Juniperus elata*. See *Libocædrus*, *Podocarpus*.

cupressinum 1 Apetal 5, G. Ev. T. 20 N. Zeal. . 1825
elatum 2 . . Apetal 5, G. Ev. T. 20 Pulo Pen. 1830
Franklinii . . Apetal 5, F. Ev. T. 20 V. D. L. . 1844

DACRYMYCES, *Nees*. From *dakru*, a tear, and *myke*, a fungus; in allusion to the deliquescent nature of the plants. *Linn.* 24, Or. 9, Nat. Or. *Agaricaceæ*. Curious and minute species of *Fungi*, found usually upon dead and partially rotten wood, in the early part of the season—*moriformis*, *stellatus*, *violaceus*.

DACTYLANTHES. See *Euphorbia*.

DACTYLACAPNOS, *Wallich*. From *dactylos*, a finger, and *kapnos*, fumitory; alluding to the berries being finger-shaped. *Linn.* 17, Or. 2, Nat. Or. *Fumariaceæ*. An interesting annual, of a climbing character, succeeding in any sandy soil. *Synonyme*: 1, *Dielytra scandens*.
thalictroidia . 1 Yel. brn. 8, F. Ev. Cl. 3 Nepal. 1831

DACTYLIS, *Linn.* From *dactylos*, a finger; the head is divided so as fancifully to resemble fingers. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. An uninteresting genus of grasses, of easy culture and propagation. *Synonymes*: 1, *Festuca antarctica*, *F. cæspitosa*, *F. flabellata*. See *Rostraria*.

glomerata . Apetal . 6, H. Grass. 1½ Britain, mead.
variegata . Apetal . 6, H. Grass. ¼ Gardens .

adscendens, *cæspitosa* 1, *cynosuroides*, *glauca*, *glaucescens*, *hispánica*, *littoralis*, *maritima*, *pârens*, *repens*.

DACTYLUM, *Nees*. From *dactylos*, a finger. *Linn.* 24, Or. 9, Nat. Or. *Botrytaceæ*. Found on the mouldering stems of herbaceous plants—*pyriferum*.

DACTYLOCTENIUM, *Willd.* From *dactylos*, a finger, and *kteis*, a comb; alluding to the digi-

tate spikes. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. A plant of little merit, and of easy culture. *Synonyme*: 1, *Cynosurus ægyptiacus*.
ægyptiacum . 1 Apetal 8, H. Grass. ¼ Egypt . 1770

DACTYLON. See *Cynodon Dactylon*.

DÆDALIA, *Persoon*. From *dædaleus*, artificial; labyrinthine arrangement of sinuosities. *Linn.* 24, Or. 9, Nat. Or. *Agaricaceæ*. Very minute species of *Fungi*, found at all seasons on rotten wood, trunks of trees, &c.—*angusta*, *betulina*, *biennis*, *Bulliardii*, *confragosa*, *gibbosa*, *quercina*, *unicolor*.

DÆMIA, *R. Brown*. The name given to it in Arabia, where the first plant was found. *Linn.* 5, Or. 2, Nat. Or. *Asclepiadaceæ*. An ornamental genus of twining plants, thriving best in a mixture of sandy loam and peat. Cuttings root freely in sand, or sandy soil, under a glass. *Synonymes*: 1, *Cynanchum bicolor*; 2, *C. extensum*; 3, *Asclèpias scandens*.

DÆMONOROPS, *Blume*. Name not explained. *Linn.* 6, Or. 1, Nat. Or. *Palmaceæ*. Interesting dwarf palms, requiring the same treatment as other stove palms. See *Zalacca*.

DAFFODIL. See *Narcissus*.

DÁHLIA, *Cavanilles*. In honour of Andrew Dahl, a celebrated Swedish botanist, and pupil of Linnæus. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. This exceedingly beautiful genus comprises almost an indefinite number of varieties, all more or less showy in the flower-garden in the autumn, when most other flowers have faded. They are all of easy cultivation, growing freely in almost any soil, particularly if of a sandy open nature. They may be raised plentifully from seeds, which should be sown early in the spring. After the flowering season is over, and the frost has damaged the leaves and branches, the roots should be taken up and placed in a secure dry place, excluded from frost till spring, when they should be divided and propagated, and brought on by dung heat, in frames, for planting out in the flower-garden in May or June. Cuttings will root with great facility by merely breaking or cutting off the young shoots, and planting them in small pots in a warm frame heat; but this practice, as seeds grow so readily, ex-

cept for very rare kinds, is more troublesome than profitable. *Synonymes*: 1, *Dahlia frustreana fulgens*; 2, *Georgina pinnata*; 3, *D. glabrata*; 4, *D. excelsa*. See *Georgina*.

The garden varieties of *Dahlia superflua* are now reckoned by hundreds, many most beautiful. Their colours and characters are described in the annual catalogues of nurserymen.

DAHOON. See *Ilex Dahoon*.

DAIS, *Linn.* The derivation of the name is unknown. *Linn.* 10, Or. 1, Nat. Or. *Thymelæaceæ*. This is an interesting species, much like the *Rhus obtinus* in its leaves; it grows in a mixture of peat and loam, and is increased from cuttings of the roots, kept in a warm situation, and sometimes from seeds.

cotinifolia . Wht. grn. 6, G. Ev. S. 10 C. G. H. . 1776

DAISY. See *Bellis*.

DALBERGIA, *Linn.* In honour of Nicholas Dalberg, a Swedish botanist. *Linn.* 19, Or. 4, Nat. Or. *Fabacææ*. Ornamental stove species, delighting most in sandy loam and peat; cuttings strike, if planted in sand, under a glass. See *Diphaca*, and *Lonchocarpus*.

DALÉA, *Linn.* In honour of Thomas Dale, an English botanist of the last century. *Linn.* 16, Or. 4, Nat. Or. *Fabacææ*. All the species of this genus are almost destitute of interest; they grow best in loam and peat. The shrubby and perennial kinds are increased by cuttings planted in sand, under a glass. The tender annual species must be sown on a gentle hot-bed, and when of sufficient size, transplanted into the open borders. *Synonymes*: 1, *Psoralea laxiflora*; 2, *P. leporina*; 3, *P. Dalea*. See *Petalostemum*.

DALIBARDA, *Linn.* Named after Denis Dalibard, a French botanist. *Linn.* 12, Or. 2, Nat. Or. *Rosacææ*. A curious plant, well suited for decorating rockwork or the front of flower-borders; it requires protecting in severe weather, and is increased by division. *Synonyme*: 1, *D. repens*. See *Comaropsis*.

violæoides . White 5, H. Her. P. ½ N. Amer. . 1768

DALRYMPLEA. See *Turpinia*.

DALTONIA. Named by Hooker in honour of the Rev. James Dalton, an excellent English muscologist. *Linn.* 24, Or. 5, Nat. Or. *Bryacææ*. Pretty dwarf species of moss. *D. splachnoides* is found growing, and that sparingly, by the side of a small stream on the Secawn Mountain, in the neighbourhood of Dublin. *Synonymes*: 1, *Nekera heteromalla*; 2, *Nekera splachnoides*—heteromalla 1, splachnoides 2.

DAMASONIUM, *Schreber*. From *damazo*, to subdue; in reference to its once supposed medicinal qualities. *Linn.* 6, Or. 4, Nat. Or. *Hydrocharidacææ*. Handsome aquatics. *D. indicum* is reputed to possess the power of removing the venom of the sea-dog. See *Actinocarpus*.

indicum	White	8, S. Aq. P.	1 E. Ind.	1800

DAMES ROCKET. See *Hesperis matronalis*.

DAMES VIOLET. See *Hesperis tristis*.

DAMMAR PINE. See *Dammara*.

DAMMAR PITCH. See *Shorea robusta*.

DAMMARA, *Mirbel*. The name of the species in Amboyna. *Linn.* 21, Or. 10, Nat. Or. *Pinacææ*. A very handsome genus of *Cortiferaæ*, thriving well in a mixture of sandy loam, but of difficult propagation. The only successful mode is to take off the cuttings as soon as ripened, and plant them in a pot of sand, under a glass, in a gentle bottom heat. Liquid storax is thought to be yielded by a species of this genus. *Synonyme*: 1, *Pinus Dammara*, *Agathis Toranhiifolia*, *A. Dammara*, *Abies Dammara*, *D. alba*.

DANÆA, Smith. In honour of Pierre Martin Dana, a writer on the plants of Piedmont. *Linn.* 24, Or. 1, Nat. Or. *Danæaceæ*. An ornamental species of fern, growing well in a mixture of peat and loam, and increased by divisions of the root.

alata . . .	Brown . 6, S. Her. P.	1½ W. Ind.	1823
-------------	-----------------------	------------	------

DANÆACEÆ or **DANÆAWORTS.** A small order of handsome ferns, some forming trees. All are natives of tropical countries.

DANCING-GIRLS. See *Mantisia Saltatoria*.

DANDELION. See *Leontodon*.

DANTHONIA, De Candolle. In honour of M. Danthone, a French botanist. *Linn.* 3, Or. 2, Nat. Or. *Graminææ*. A worthless genus of grasses, of simple cultivation. *Synonymes*: 1, *Avèna provinciâlis*; 2, *A. semiannularis*; 3, *A. glutinæa*; 4, *A. strigosa*—calycina, curvifolia, longifolia, macrantha, pilosa, provinciâlis 1, semiannularis 2, sericea, spicata 3, strigosa 4.

DAPHNACEÆ. See *Thymelæaceæ*.

DAPHNADS. See *Thymelæaceæ*.

DAPHNE, Linn. From *dato*, to burn, and *phone*, a noise; it crackles when burning. *Linn.* 8, Or. 1, Nat. Or. *Thymelæaceæ*. All handsome dwarf shrubs, mostly evergreens, excellently suited for planting near the front of shrubberies. The branches of *D. Cneorum* are procumbent, stretching to a great distance; whence it makes a beautiful rock plant. All the species prefer a peaty soil, and are readily increased by grafting on the common Spurge Laurel (*D. Lauræda*), which may be plentifully raised from seed. In the South of Europe, *D. Gnidium* is used to dye wool yellow. The berries of *D. Laureda* are poisonous to all animals except birds. *Synonymes*: 1, *D. Dauphîntii*; 2, *D. collina neapolitana*; 3, *D. canabina*; 4, *D. oleifolia*; 5, *Passerina Tarton-rara*; 6, *P. villosa*; 7, *P. Thymelæa*; 8, *Mezereum foliis-atropurpureus, papyræa*. See *Lagëtta, Edgworthia*.

DATISCÆÆ or **DATISCADS**. A small order nearly related to Begoniads—consisting of herbaceous plants and a few large trees.

DATŪRA, *Linn.* An alteration of the Arabic name, *tatorah*. *Linn.* 5, Or. 1, Nat. Or. *Solanaceæ*. An ornamental genus, but chiefly composed of plants possessing very deleterious qualities. The seeds of *D. ceratocaulon* will sometimes remain in the ground for several years before they vegetate. The seeds of all the species require to be sown early in spring, on a hotbed, and when of sufficient size they should be transplanted into a warm border, where they will flower better than if kept in pots. In the United States the juice of *D. Stramonium* is used in doses of from twenty to thirty grains in cases of epilepsy, or of mania without fever. *Synonymes*: 1, *humilis*; 2, *Brugmansia suaveolens*. See *Brugmansia*.

DEAL-WOOD is the timber of *Pinus*.

DAY LILY. See *Hemerocallis*.

DEADLY CARROT. See *Thapsia*.

DEADLY NIGHTSHADE. See *Atropa Belladonna*.

DEAD NETTLE. See *Galeobdolon*.

DEASTËLLA. See *Mimëtis*.

DËBËLE, weak, feeble, slender.

DECÁNDROUS, having ten stamens.

DECAPHÏLLOUS, ten-leaved.

DECIDUOUS, falling off. Leaves which are shed annually are said to be deciduous; as are trees that annually lose their leaves.

DECIDUOUS CYPRESS. See *Taxodium distichum*.

DECÍPIENS, deceiving, by resembling something else.

DECLINATE, curved downwards.

DECOCTION, a preparation or digest, by boiling water.

DÉCODON, *Gmelin*. From *déka*, ten, and *odous* (*odontos*), a tooth; referring to the calyx having ten teeth. *Linn.* 10, Or. 1, Nat. Or. *Lythraceæ*. This is a handsome border plant when in flower, growing in any common soil, and increased by dividing the plant at the roots. *Synonyme*: 1, *Nesaea verticillata*. verticillatus 1, Purple 8, H. Her. P. 2 N. Amer. 1759

DECOMPOUND: a leaf is said to be decomposed when it is often pinnated; a panicle, when its branches are also paniced.

DECORTICATED, disbarked.

DECUMARIA, *Linn.* From *decuma*, a tenth; in reference to the tenfold structure of some of the flowers and fruit. *Linn.* 11, Or. 1, Nat. Or. *Philadelphææ*. The species of this genus are ornamental, and well adapted to training against a wall or trellis; they grow well in any common soil, and may be increased by layers, or cuttings planted in sand, under a glass.

barbara . . . White 7, H. De. Tw. 4 Carolina . 1785
prostrata . . . White 7, H. De. Tr. 3 N. Amer. 1820
sarmentosa . . . White 7, H. De. Tw. 25 Carolina . 1758

DECUMBENT, lying down.

DECURRENT, running down.

DECURSIVE, having a tendency to run down.

DECUSSATE, when two right lines cross each other at right angles, they are said to be decussate.

DEERÍNGIA, *R. Brown*. In memory of Dr. Charles Deering, an English botanical author. *Linn.* 5, Or. 1, Nat. Or. *Amarantææ*. Curious but weak-growing plants. The seeds require to be sown in a hothouse or hotbed, and when of sufficient size the plants may be potted off and placed among the stove plants. *Synonyme*: 1, *Celòsia baccata*.

celosioides White . 9, S. B. 4 E. Ind. . 1804
indica . . . White . 10, S. B. 1½ E. Ind. 1824

DEFLEXED, turned downwards.

DEFOLIATUS, deprived of leaves.

DÍGRAPHIS, *Trinius*. Derived from *dis*, twice, and *grapho*, to mark. *Linn.* 3, Or. 2, Nat. Or. *Graminææ*. Worthless species of grass, growing in any common soil, and increased by divisions at the roots. *Synonymes*: 1, *Phalaris arundinææ*; 2, *Arundo colorata*—*americana* 1, *arundinææ* 2, *variegata*.

DEHISCENT, gaping; an expression applied to the mode in which the anthers or the fruit burst open and discharge their contents.

DELESSÈRIA, *Lamour*. In honour of M. Benjamin Delessert, a famous French botanical patron. *Linn.* 24, Or. 7, Nat. Or. *Ceramiææ*. Beautiful species, of mostly deep green *Algae*, found in the ocean and on the sea-shore—*alata*, *a. angustissima*, *a. dilatata*, *Bonnemaissonii*, *glandulosa*, *gmelina*, *hypoglóssum*, *lace-*

rata, *ocellata*, *Plocàmium*, *punctata*, *ruscifolia*, *sanguinea*, *sinuosa*, *uncinata*.

DELÍMA, *Linn.* From *delino*, to file or shave off; the leaves are used for polishing. *Linn.* 13, Or. 1, Nat. Or. *Dillenææ*. Very fine climbing plants, growing best in loam, peat, and sand mixed; ripened cuttings root in sand, under a glass, in heat. *Synonyme*: 1, *Tetrácerca sarmentosa*.

nitida . . . Yellow 6, S. Ev. Cl. 10 Trinidad. 1830
sarmentosa 1. Yellow 6, S. Ev. Cl. 10 Ceylon . 1820

DELIQUESCENT, melting away upon exposure to air.

DELPHÍNIUM, *Linn.* From *delphin*, a dolphin; in reference to the supposed resemblance in the nectary of the plant to the imaginary figures of the dolphin. *Linn.* 13, Or. 3, Nat. Or. *Ranunculææ*. All the species of larkspur are showy, and valuable as border flowers, especially *D. Ajácis* and *Consólida*, both of which are universally grown among the border annuals. The herbaceous and perennial kinds are increased by divisions or seeds, and the annual and biennial kinds merely require sowing in the open border, where they will flower and seed freely. *D. Consólida* is regarded as a simple astringent. *Synonymes*: 1, *D. tridáctylon*; 2, *D. hírsutum*; 3, *D. intermédium*; 4, *D. jánecum*; 5, *D. ambíguum*. See *Consólida*.

The garden varieties of Delphinium, as given in the catalogues of nurserymen, are some of them exceedingly beautiful. A few may be named—*delicatum*, *cardiopetalum*, *Hendersoni*, *magnificum*, *grandiflorum*, *maximum*, *formosum*, *Montmorency*, *Mooreanum*.

DELTA-LEAVED, shaped like the Greek Δ.

DELTOIDES, triangular.

DEMÁTUM, *Persoon*. From a diminutive of *dema*, a bundle; in reference to the mode of growth. *Linn.* 24, Or. 9, Nat. Or. *Botrytaceae*. An extremely minute species of *Fungi*, of a bluish colour, found on the stems of herbs in autumn—*articulatum*.

DEMULCENT, having the property of softening anything.

DENDRÓBIUM, *Swartz*. From *dendron*, a tree, and *bios*, life; in the places of their natural growth, the species are generally found upon trees. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceae*. No orchidaceous plants contribute more to the gaiety of the stove than the species of this splendid genus. *D. nobile*, *chrysanthum*, *Gibsonii*, *fimbriatum*, *densiflorum*, and many others, are equalled by few, and certainly not surpassed, in the beauty of their flowers, by any other orchidaceous plants; and if the following directions be attended to, they will be found very easy of culture:—All orchidaceous plants require (to cultivate them successfully), a season of growth, a season of rest, and a season for flowering; all of which should coincide, as much as possible, with the corresponding seasons of those parts of the globe which they so profusely inhabit; and the species of this genus should especially be subjected to a change of treatment assimilating as much as

possible to that before mentioned, without which, they will never flower in perfection. In India, three seasons only are known; the hot, or dry season, which is succeeded by the rainy season, and the cold, or winter season. In the hot season, all, or the greater part, of the plants belonging to this genus produce their flowers; in the rainy season, they make their shoots; and during the cold season, they have a period of repose. The different seasons being so well known, it is very easy to imitate them in our hothouses, and by attending to these simple rules, we should be enabled to flower the species of this more abundantly than those of any other orchidaceous genus, besides which, they might be easily induced to flower in this country at any season of the year. *D. chrysanthum*, *Pterardi*, and some others grow well when fastened singly on pieces of wood, and treated as is recommended under *Burlingtonia*; but they all succeed well when potted in very turfy peat, raised above the pot, in the same way as is recommended in potting *Stanhopeas*. A strong moist heat is indispensable in the growing season, when they may be frequently slightly syringed overhead. They will be found to succeed best in a warmer part of the house than the *Stanhopeas* require. They are propagated by detaching one or more of the stems while in a dormant state, taking care not to injure the roots, and potting it carefully in turfy peat soil, and not much raised above the pot, which must be carefully drained; the pot should then be plunged in a gentle bottom heat, where the plant will speedily produce new shoots. *Synonymes*: 1, *D. cucullatum*; 2, *D. pusillum*; 3, *cupreum*, *clavatum*, *Cymbidium moschatum*, *Epidendrum moschatum*; 4, *Pedilium Kühlii*, *P. secundum*; 5, *barbatulum*; 6, *Färmeri alba*, *fimbriatum majus*, *formosum giganteum*; 7, *moulmeinense*, *tortile rosea*; 8, *Holochrysa*; 9, *Desmotrichum cymbidioides*; 10, *Desmotrichum criniferum*. See *Aporem*, *Broughtonia*, *Camaridium*, *Dipodium*, *Eria*, *Polystachya*, *Specklinia*, and *Xylobium*.

DENDROMÈCON, Benth. From *dendron*, a tree, and *mekon*, a poppy; alluding to the shrubby habit and affinity of the plant. *Linn.* 13, Or. 1, Nat. Or. *Papaveraceæ*. This is rather a remarkable plant, thriving in any common garden soil, and increased by seeds.
 rigidum . . Yellow . 5, F. Ev. S. 2 California . 1833

DENHAMIA. See *Culcasia*.

DÉNS-CANIS. See *Erythronium Déns-canis*.

DÉNSUM, thick, tufted, bundled.

DENTARIA, Tournefort. From *dens*, a tooth; alluding to the tooth-like structure of the

- roots; whence the English name, Toothwort. *Linn.* 15, Nat. Or. *Brassicæ*. This is a genus of very ornamental plants, well worthy of cultivation in every garden. They succeed best in a light, rich, sandy soil in a moist shady situation; they may be multiplied by divisions or seeds.

- DENTATE**, having the margin divided into incisions, resembling teeth.
- DENTATELY-CILIATED**, having the margin toothed, and tipped with hairs.
- DENTATELY-SINUATED**, scalloped and toothed.
- DENT DE LEON**. See *Leontodon Taraxacum*.
- DENTELLA**, *Forster*. From a diminutive of *dens*, a tooth; each side of the segments of the corolla is furnished with a small tooth. *Linn.* 5, Or. 1, Nat. Or. *Cinchonæ*. A small, creeping plant, the seeds of which require to be sown on a hotbed in spring, and when of sufficient size, they may be planted out into the open border. *Synonyme*: 1, *Oldenlandia repens*.
 repens 1 . . . White . 6, F. A. ¼ E. Indies . . . 1802
- DENTICULATE**, the margins finely and slightly toothed.
- DENTICULATELY-CILIATED**, having the margin so finely toothed as to appear edged with hairs.
- DENTICULATIONS**, very small teeth.
- DENTIFORM**, tooth-shaped.
- DENTIFRICE**, powder made to scour the teeth.
- DROBSTRUENT**, having the power of removing obstructions; a term in medicine.
- DEODAR CEDAR**, or **DEODARA**. See *Cedrus Deodara*.
- DEPAUPERATE**, impoverished, poor.
- DEPENDENT**, hanging down.
- DEPRESSED**, pressed downwards, low.
- DEPURATED**, purified, cleansed.
- DERRIS**, *De Candolle*. From *derris*, a skin; in reference to the thinness of the pods. *Linn.* 17, Or. 4, Nat. Or. *Fabacæ*. Pretty greenhouse climbing shrubs, growing freely in light soil, and cuttings of the ripe wood strike freely in sand, under a glass, in heat.
 trifoliata . . . White . 5, G. Cl. P. China . . . 1826
- DESCENDENS**, growing downwards.
- DESCHAMPŒIA**, *Beauvois*. In honour of M. Deschamps, M.D., a celebrated French botanist. *Linn.* 3, Or. 2, Nat. Or. *Graminæ*. A genus of grasses, which will grow in any common soil, and are increased by divisions and seeds. *Synonymes*: 1, *Aira bœthica*; 2, *A. cespitosa*; 3, *A. lævigata*; 4, *A. montana*; 5, *A. paludosa*.

- DESPONTAÏNEA**, *Ruis* and *Pav.* Named in honour of M. Desfontaines, a French botanist. *Linn.* 5, Or. 1, Nat. Or. *Gentianæ*. The species are handsome, and are well worth cultivating. A mixture of loam, peat, and sand suits them, and cuttings will root if planted in the same soil, and placed under a glass, in heat. *Synonymes*: 1, *D. splendens*, *Hookeri*, *acutangula*.
 spinosa 1 . . . Scar. yel. 6, G. Ev. S. 10 Peru . . . 1550
- DESMANTHUS**, *Willdenow*. From *desme*, a bundle, and *anthos*, a flower; the flowers are collected into bundles, or spikes. *Linn.* 23, Or. 1, Nat. Or. *Fabacæ*. Some of the species of this genus are rather ornamental, while others are not worth cultivating. They like a mixture of peat and loam, and young cuttings root freely in sand, under a glass. The aquatic kinds require to be grown in large tubs, with five or six inches of soil in the bottom, and filled up with water. The tubs should be placed in a warm situation in the stove, where the plants will grow, and produce seeds, from which they may be increased. See *Neptunia*.

DIANTHUS, *Linn.* From *dios*, divine, and *anthos*, a flower; in reference to the fragrance of the blossoms, and the unrivalled neatness of the flowers. *Linn.* 13, Or. 2, Nat. Or. *Caryophyllacæ*. A truly beautiful and ornamental genus, containing some of the most prized flowers we possess, on account of their beauty and fragrance; the foliage of the perennial kinds is also as green and vivid in winter as it is in summer. The rarer species should be grown in pots, so that they can be protected in winter. They all delight in light loamy soil, mixed with a little rotten dung, or decayed leaves and sand. They may be increased by seeds, layers, cuttings, and division of the roots. The cuttings should be planted out under a glass, about the middle of June, and if on a gentle hotbed, they will be ready for planting in the open ground in about three weeks. The annual and biennial kinds merely require sowing in the open border, where they will grow and flower freely. *Synonymes*: 1, *D. scaberr*; 2, *D. glaucophyllus*; 3, *D. pumilus*; 4, *D. atrorubens*; 5, *D. orientalis*; 6, *D. neglectus*; 7, *D. furcatus*; 8, *D. DIAPENSIA. Named by Linneus from *diapente*, composed of five; alluding to the flowers being five-cleft. *Linn.* 5, Or. 1, Nat. Or. *Diapensiaceæ*. A very pretty little alpine plant, but rather difficult to cultivate, as too much moisture is very apt to kill it. In its native country, it is continually covered with snow in winter, which protects it from the severe dry frosts. It succeeds best grown in small pots, in peat soil, with the protection of a frame in winter, and is increased by seeds, or divisions. See *Pyzidanthera*.

lapponica. White . 7, H. Her. P. 1 Lapland . 1801

DIAPENSIACEÆ, or DIAPENSIADS. An order of small prostrate shrubs, principally natives of mountain ranges in the north of Europe and North America.

DIAPHANOUS, transparent.

DIAPHORETIC, promoting perspiration.

DIARRHÆNA, Mich. From *dis*, twice, and *aner*, a male. Only two of the stamens usually fertile. *Linn.* 3, Or. 1, Nat. Or. *Graminæcæ*. A hardy American grass of no beauty, and growing in common soil—*americana*.

DIASCIA, Link. From *dis*, twice, and *askion*, a little bladder; because of the two protuberances at the base of the corolla. *Linn.* 14, Or. 2, Nat. Or. *Scrophulariæcæ*. A Cape annual, of no value—*Bergiana*.

DIASTELLA. See *Mimides*.

DIASTÈMA, Benth. A Gesneraceous genus of plants. The generic name is probably given in allusion to the genus being intermediate betwixt *Achimenes* and *Gesnera*. *Linn.* 14, Or. 2, Nat. Or. *Gesneræcæ*. For culture, &c., see *Gesnera*.

ochroleuca. White . 8, S. Hor. P. 1 N. Grenada 1844

DIATOMA, De Candolle. From *diatome*, separation; the filaments are divided into joints. *Linn.* 24, Or. 7, Nat. Or. *Diatomæcæ*. Very minute species of yellow and green *Algæ*, found at all seasons of the year in the ocean, ditches, and on the sea-coast—*auritum*, *Biddulphiænum*, *brachygonum*, *elongatum*, *floculosum*, *marinum*, *obliquatum*, *striatulum*, *tenuis*.

DIATOMÆCÆ, or BRITTLE-WORTS. Small crystalline fragmentary bodies, found in the sea, and in still waters and oozy places in all the northern parts of the world.

DIBLÈMMA, J. Smith. Derivation unknown. *Linn.* 24, Or. 1, Nat. Or. *Polypodiæcæ*. Stove ferns.

samarènsis. Brown 6, S. Her. P. 1 1/2 E. Indies.

DICERA, Forster. From *dis*, double, and *keras*, a horn; the anthers are terminated by two horns or bristles. *Linn.* 11, Or. 1, Nat. Or. *Elæocarpæcæ*. A rambling shrub, growing to the height of about two feet. It succeeds well in a mixture of loam and peat; and cuttings of the ripened wood root in sand, under a glass. *Synonymes*: 1, *Elæocarpus dentatus*, *Eriostemon dentatus*.

dentata 1. White . 7, G. Ev. S. 2 New Zeal. . 1810

DICERMA, De Candolle. From *dis*, twice, and *erma*, a prop; the calyx is propped at the base by two bracts. *Linn.* 17, Or. 4, Nat. Or. *Fabæcæ*. A genus of very elegant shrubs, about three feet high, growing in a mixture of loam and peat; they may be increased by young cuttings planted in sand, under a glass, or by seeds. *Synonymes*: 1, *Hedysarum biarticulatum*; 2, *Zornia elegans*, *Hedysarum elegans*; 3, *Zornia pulchella*.

biarticulatum 1. Yellow . 7, S. Ev. S. 2 1/2 E. Ind. 1803

elegans 2. Yellow . 7, S. Ev. S. 1 China. 1819

pulchellum 3. Yellow . 7, S. Ev. S. 3 E. Ind. 1798

DICHÆA, Lindley. From *dichi*, in two rows; in allusion to the arrangement of the leaves. *Linn.* 20, Or. 1, Nat. Or. *Orchidæcæ*. These are small, uninteresting little plants, succeeding best when treated as the genus *Burlingtonia*. *Synonymes*: 1, *Cymbidium graminoides*, *Epidendrum graminoides*.

graminoides 1. Grn. yel. 6, S. Epi. 1 Demerara. 1823

glauca . . . Wht. yel. 6, S. Epi. 1 Oaxaca . 1844

ochræca . . . Yellow . 4, S. Epi. 1 Demerara. 1839

DICHLIS, De Candolle. From *dis*, twice, and *cheilos*, a lip; in allusion to the calyx being deeply two-lipped. *Linn.* 16, Or. 6, Nat. Or. *Fabæcæ*. A pretty little shrub; for culture and propagation, see *Loddigesia*.

Lobekioides. Wht. yel. 4, G. Ev. S. 2 C. G. H. . 1826

DICHLAMYDEOUS plants are those whose flowers have a calyx and corolla distinct; from *dis*, two, and *chlamys*, a coat or covering.

DICHONDRA, Forster. From *dis*, twice, and *chondros*, a grain; in allusion to the form of the capsules. *Linn.* 5, Or. 2, Nat. Or. *Notanæcæ*. Little creeping inconspicuous plants, seldom to be met with in collections; they grow well in peat and loam, and may be increased by cuttings.

argentea . . . White 7, G. Ev. Cr. 1/2 W. Ind. . 1800

carolinensis . . . White 7, F. Ev. Cr. 1/2 Carolina . 1810

repens . . . White 7, G. Ev. Cr. 1 1/2 N. S. W. . 1803

rotundifolia . . . White 7, G. Ev. Cr. 1/2 . 1819

sericea . . . White 7, S. Ev. Cr. 1 1/2 Jamaica . 1793

DICLINOUS EXOGENS. The plants thus named never (or at least very rarely) have bisexual flowers, but consist of species in which the stamens constantly appear in one kind of flower, and the pistil in another.

DICHRIZANDRA, Mican. From *dis*, twice, *chorizo*, to part, and *aner*, an anther; in reference to the anthers being two-cleft. *Linn.* 6, Or. 1, Nat. Or. *Commelynæcæ*. Beautiful herbaceous plants, resembling *Commelyna* in

their foliage, and may be referred to that genus for culture and propagation.

DICHOSEMA, *Bentham*. From *dichos*, double, and *sema*, a standard; the standard is two-lobed. *Linn.* 10, Or. 1, Nat. Or. *Fabaceæ*. This genus is nearly related to *Chorozema*, and requires the same treatment. Propagation is by cuttings and seeds.

- subinérme . . . Yel. red. 5, G. Ev. S. 2 Swan R. . . 1851

DICHOSMA. Derived from *dicha*, without, and *osme*, a smell. *Linn.* 5, Or. 1, Nat. Or. *Rutaceæ*. An ornamental species; for culture, &c., see *Diósma*. *Synonyme*: 1, *Diósma bifida*.

- bífida . . . White . 5, G. Ev. S. 2 C. G. H. . .

DICHOSPORIUM, *Nees*. From *dicha*, double, and *spora*, a spore; in allusion to the double coat of the peridium. *Linn.* 24, Or. 9, Nat. Or. *Mucoraceæ*. An extremely minute species, found on the bark of oak trees in autumn. *Synonyme*: 1, *Spumaria physaroides*—aggregatum 1.

DICHOTOMOUS, a stem that ramifies in pairs.

DICHROCÉPHALA. See *Grængea*.

DICHRONEMA. See *Schœnus*.

DICKSONIA, *L'Heritier*. In honour of James Dickson, a famous British cryptogamic botanist. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceæ*. A very ornamental genus of ferns, containing the tree-fern of St. Helena, which has often been brought in a living state to this country, but it rarely survives many months. The species do well in a mixture of loam and peat, and are readily increased by divisions or seeds. See *Balanium*, *Cibotium*, and *Sitoldbium*.

DICOCOUS, having two cocci.

DICOTYLEDONES. Having two *Cotyledons*.

DICRANUM, *Hedwig*. From *dikranos*, two-headed; in reference to the divisions of the teeth of the capsule. *Linn.* 24, Or. 5, Nat. Or. *Bryaceæ*. A fine genus of mosses; many of the species form broad masses of turfy vegetation, giving a beautiful character to the face of the earth where they grow. They are found at all seasons, and almost in every situation.

Synonymes: 1, *Hypnum adiantoides*; 2, *Dicranum virtidulum*, *osmundioides*; 3, *D. pusillum*, *uncinatum*; 4, *Trichostomum piliferum*; 5, *D. flagillare*; 6, *Hypnum laxifolium*; 7, *D. callistomum*. See *Didymodon*, *Grinnia*, *Leicodon*, and *Trichostomum*—adiantoides 1, bryoides 2, cerviculatum 3, crispum, falcatum, flagellare, flavescens, flexuosum, fulvellum, glaucum, heteromallum, latifolium 4, longifolium, pellucidum, polycarpon, Schreberianum, scoparium, fuscescens-majus, Scottianum 5, spurium, squarrosum, Starkii, strumiferum, subulatum, taxifolium, undulatum, varium, luridum, rufescens, viride 7, virens.

DICRYPTA, *Lindley*. From *dis*, double, and *krypto*, to conceal; alluding to the structure of the four pollen masses. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. Curious species, with solitary flowers, requiring the same treatment as *Stanhopea*. *Synonymes*: 1, *Heterolaxis crassifolia*, *D. crassifolia*.

DICTAMNUS, *Linn.* An ancient name supposed to have been given because the leaves resemble those of the Ash; hence the English name, *Fraxinella*. *Linn.* 10, Or. 1, Nat. Or. *Rutaceæ*. A genus of very ornamental plants, deserving a place in every flower-border. *D. Fraxinella*, when rubbed, emits a fine odour, something like that of lemon-peel; this fine scent is strongest in the pedicels of the flowers. The species succeed well in any common garden soil, and may be increased by seeds, which ripen freely. The roots were formerly esteemed as a sudorific and vermifuge. *Synonyme*: 1, *D. albus*. See also *Origanum Dictamnus*.

DICTYANTHUS, *Jord.* From *diktyon*, a net, and *anthos*, a flower; the flowers are netted with purple veins. *Linn.* 5, Or. 2, Nat. Or. *Asclepiadaceæ*. Climbing plants of considerable beauty, capable of bearing the open air in summer, but must be sheltered in a warm greenhouse or stove in winter. The treatment is the same as for *Asclepias*. *Synonymes*: 1, *Stapelia campanulata*, *Tympananthe suberosa*.

- campanulatus . . . Wht. pur. 6, S. Cl. S. 10 Brazil . 1851

pteroides . Yellow . 6, S. Her. P. 1½ Australia 1842
- DIDÉLTA**, *L'Heritier*. From *dis*, double, and *delta*, the Greek letter equivalent to the English D; in reference to the double receptacle. *Linn.* 19, Or. 3, Nat. Or. *Asteraceae*. Shrubs, with little to recommend them, growing well in peat and loam, mixed; and may be increased by cuttings—*caridsum*, *spinidsum*.
- DIDÉRMA**, *Persoon*. From *dis*, double, and *derma*, skin; in allusion to the double peridium. *Linn.* 24, Or. 9, Nat. Or. *Lycopodiaceae*. Found on bark, moss, dead oak leaves, &c. *Carmichaelianum*, *cyanescens*, *deplanatum*, *nitens*, *spumarioides*, *umbilicatum*.
- DIDÉSMIS**, *Desfontaines*. From *dis*, twice, and *desmos*, a bond; the pod is jointed like two links of a chain. *Linn.* 15, Nat. Or. *Brassicaceae*. Uninteresting annuals, of the simplest culture. *Synonymes*: 1, *Myagrism egyptiacum*; 2, *Sinapis bipinnata*—egyptiaca 1, bipinnata 2.
- DIDISCUS**. See *Trachymène*.
- DIDYMIUM**, *Schrader*. From *didymos*, double; in allusion to the inner and outer peridium. *Linn.* 24, Or. 9, Nat. Or. *Lycopodiaceae*. Very small species of *Fungi*, occasionally seen on dead leaves—*globdsum*, *lobatum*, *peritium*, *serpula*.
- DIDYMOCARPUS**. In reference to the twin capsules, from *didymos*, twin, and *karpos*, fruit. *Linn.* 14, Or. 2, Nat. Or. *Gesneriaceae*. A genus of pretty plants, requiring a mild stove or warm greenhouse. They should be potted in rather light soil, consisting of heath mould and leaf mould, and increased by division. *Synonyme*: 1, *Henckelia crinita*. See *Streptocarpus*.
crinitus 1 . . . Wt. yl. . 6, S. Her. P. ½ Pulo Pen. 1845
Humboldtianus . . . Violet . 10, S. Her. P. ½ Ceylon . 1853
polyanthus . Lilac . 6, S. Her. P. ½
- DIDYMOCHLÉNA**, *Desvaux*. From *didymos*, double, and *chlaina*, a cloak; indusium. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceae*. Very pretty ferns, requiring the same treatment as other stove plants of its class. *Synonymes*: 1, *Aspidium truncatulum*, *Didymochlèna sinuata*.
pulcherrima . Brown 7, S. Her. P. 4 Brazil . . .
truncatula 1 . Brown 6, S. Her. P. 4 Brazil . . 1838
- DIDYMODON**, *Hedwig*. From *didymos*, double, and *odon*, a tooth; the teeth of the fringe are in pairs. *Linn.* 24, Or. 5, Nat. Or. *Bryaceae*. A genus of chiefly greenish mosses, found in spring and summer on mountain rocks and moist banks. *D. inclinatum* is only to be met with in this country, upon the mountains of Connemara, in Ireland. *Synonymes*: 1, *Trichostomum capillaceum*; 2, *T. flexifolium*; 3, *Grimmia heteromalla*; 4, *G. inclinata*; 5, *G. atrovirens*; 6, *D. Bruntoni*; 7, *Bryum bipartitum*, *Dicranum Oelsii*, *D. strictum*, *Trichostomum papillosum*; 8, *T. rigidulum*; 9, *T. trifarium*, *linoides*—brachydontius, capillaceum 1, crispulum, cylindricum, flexifolium 2, glaucescens, heteromallum 3, inclinatum 4, ithyphyllum, nervosum 5, obscurum 6, purpureum 7, rigidulum 8, trifarium 9.
- DIDYMOUS**, two united; applied to the fruit when they appear twin.
- DIDYNAMIA**, the fourteenth class in the Linnæan system of botany. From *dis*, twice, and *dynamis*, power, two stamens have the superiority.
- DIDYNAMOUS**, having two long stamens and two short ones in the same flower, each pair being collateral.
- DIEFFENBACHIA**, *Schott*. See *Caladium*.
- DIÉLYTRA**, *Borkhausen*. From *dis*, double, and *elytra*, a sheath; the base of the flower is furnished with two sheath-like spurs. *Linn.* 17, Or. 2, Nat. Or. *Fumariaceae*. A genus of very desirable herbaceous plants. Any light rich soil suits them, and they are easily increased by divisions or seeds. *Synonymes*: 1, *Corydalis canadensis*; 2, *Fumaria cucullaria*; 3, *F. eximia*; 4, *Corydalis tenuifolia*.

- DIÈNIA**, *Lindley*. From *dis*, two, and *enia*, a strap; in allusion to the attachment of the pollen-masses. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceae*. This is a plant of no particular beauty. Turfy peat soil, and an efficient drainage, will be found to suit it.
cordata . Green . 9, S. Epi. ½ Mexico . . 1837
- DIÉRVILLA**, *Tournefort*. In compliment to M. Dierville, a French surgeon. *Linn.* 5, Or. 1, Nat. Or. *Caprifoliaceae*. Very desirable plants for the front of shrubberies, growing from three to four feet high, in any common soil; they may be readily increased by cuttings put into the ground in autumn and spring, or by suckers, which they throw up in great quantities from the roots. *Synonyme*: 1, *D. canadensis*, *Lonicera Diervillea*; 2, *Weigela amabilis*.

DIETES, *Salisbury*. From *dis*, twice, and *etes*, an associate; the genus is nearly related to *Iris* and *Moræa*. *Linn.* 3, Or. 1, Nat. Or. *Iridaceæ*. The plants of this genus are very ornamental, and for culture, &c., may be referred to *Iris*. *Synonymes*: 1, *Iris bicolor*; 2, *Moræa catenulata*; 3, *Iris moræoides*, *Moræa iridioides*.

DIETETICS, relating to food or diet.

DIFFORM, different forms; used to express irregularity.

DIFFUSE, scattered, widely spread.

DIGITALIS, *Linn.* Derived from *digitale*, the finger of a glove; in allusion to the resemblance the flower bears to the finger of a glove. *Linn.* 14, Or. 2, Nat. Or. *Scrophulariaceæ*. The species are mostly very showy border flowers, growing in any common garden soil. The tender kinds are best planted in pots, so that they may have the protection of the frame in winter. According to De Candolle, the powdered leaves, or an extract of them, produce vomiting, dejection, and vertigo, increase the secretion of saliva and urine, lower the pulse, and even cause death. *Synonymes*: 1, *D. grandiflora*; 2, *D. hybrida*; 3, *parviflora*; 4, *intermedia*; 5, *ambigua*; 6, *erubescens*; 7, *D. micrantha*, *D. hybrida purpurascens*. DIGITARIA, *Schrador*. Derived from *digitus*, a finger; alluding to the singular manner in which the heads are divided. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. A genus of grasses, all the species of which are uninteresting. They grow in any common soil, and may be multiplied by seeds. *Synonymes*: 1, *D. humifusa*;

2, *Milium filiforme*—egyptiaca, affinis, barbata, bicornis, biformis, ciliaris, eriogona, filiformis, glabra 1, linearis, marginata, paspaloides, Roxburghii 2, sanguinalis, villosa.

DIGITATED, fingered, shaped like the hand spread open.

DIGITIFORM, formed like fingers.

DIGNATHE, *Lindl.* Name not explained by the author. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. This is a genus nearly allied to *Aspasia*. The species have no particular beauty. Treatment the same as other Mexican epiphytes.
pygmæa . . . Gr. yl. sp. . 6, S. Epi. 1/2 Mexico .

DIGRAPHIS. See *Dégraphis*.

DIGYNIA. The second order in the Linnæan system of botany; from *dis*, twice, and *gynæ*, a woman. Flowers having two styles.

DIGYNOUS, having two styles, or female organs.

DILATED, widened.

DILATRIS, *Linn.* Meaning unexplained. *Linn.* 3, Or. 1, Nat. Or. *Hemodoraceæ*. Ornamental plants, growing about a foot high in sandy peat; they are readily propagated by seeds or divisions.
corymbosa . . . Purple . 5, G. Her. P. 1 C. G. H. 1790

DILYRIA, *Juss.* See *Acanthus ilicifolius*.

DILL. See *Anethum*.

DILLENIA, *Linn.* After the celebrated professor of botany at Oxford, John James Dillenia, author of *Hortus Elthamensis*, &c. *Linn.* 13, Or. 6, Nat. Or. *Dilleniaceæ*. A splendid tree, which thrives well in the collections of this country. It grows best in a light loamy soil, or loam and peat; ripened cuttings, not deprived of any of their leaves, will root in sand, under a glass, in heat. The young calyxes are used in curries by the inhabitants of Bengal. See *Cobberitia*, *Tetræcera*, and *Wormia*.
speciosa . . . Wht. yel. 4, S. Ev. T. 25 E. Ind. . 1800

DILLENIACEÆ, or **DILLENIADS**. An order consisting principally of trees, shrubs, and undershrubs, nearly allied to magnoliads, and possessing considerable beauty. Some are fruit-bearing and others form fine timber trees.

DILLWYNIA, *Smith*. In honour of Lewis Weston Dillwyn, F.R.S., L.S., &c., a well-known British botanist. *Linn.* 10, Or. 1, Nat. Or. *Fabaceæ*. Very elegant shrubs when in flower, and well worthy of cultivation in every collection. They grow from one to four feet high, in an equal mixture of loam, peat, and sand, with the pots well drained. Cuttings of the young wood root freely in sand, under a glass. See *Eutaxia*, *Chorozema*, and *Pultenda*.

DIMIDIATE, divided into two parts.

DIMOCARPUS. See *Euphòria*.

DIMORPHA. See *Parivòla*.

DIMORPHOTHECA. See *Calendula*.

DINEBRA, *Beauvois*. Its Arabic name. *Linn.* 3, Or. 2, Nat. Or. *Graminaceae*. An annual species, growing in any garden soil, and increased by seeds. See *Atheropogon*, and *Wangenheimia*.

arabica . . .	Apetal 6, H. Grass. ½	E. Ind.	. 1804
---------------	-----------------------	---------	--------

DINEMA, *Lindley*. Not explained. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceae*. A very pretty genus; for culture and propagation, see *Stanhopea*. *Synonyme*: 1, *Epidendrum polybalbon*. *polybalbon* 1 White . 12, S. Epi. ½ Jamaica . 1822
palaceum . Straw col. 9, S. Epi. ½ Guatemala

DINETUS, *Sweet*. From *dinctos*, that may be twined; in allusion to the habit of the plants. *Linn.* 5, Or. 1, Nat. Or. *Convolvulaceae*. A very ornamental genus; the perennial species thrive well in any rich light soil. Young cuttings, planted in the same sort of soil, under a glass, in heat, will soon root. *D. racemosa* grows very fast in a sheltered situation, and is well adapted to make a good covering for a temporary arbour. It is increased from seed, which is ripened in abundance. *Synonymes*: 1, *Porrano paniculata*; 2, *P. racemosa*.

paniculata 1 . . .	White 8, S. Ev. Tw. 10	E. Ind.	. 1823
racemosa 2 . . .	White 8, H. Tw. A.	10 Nepal	. 1823

DIÖCLEA, *H. Bet. Kuath*. In memory of Diocles Carystinus, an ancient Greek botanist. *Linn.* 17, Or. 4, Nat. Or. *Fabaceae*. A twining shrub, growing in any common soil, and increased by cuttings in sand, under a glass, in heat. *Synonyme*: 1, *Dolichos mollis*—*mollis* 1.

DIDDLA, *Linn.* From *didodos*, a passage; many of the species grow by the way-sides. *Linn.*

4, Or. 1, Nat. Or. *Cinchonaceae*. A genus of rather pretty trailing shrubs, of simple cultivation. A light soil suits them best; and cuttings, in the same kind of soil, root freely if placed in heat.

prostrata . . .	White 6, S. Ev. Tr. ½	W. Ind.	. 1818

DIOECIA. The twenty-second class of the Linnæan system of botany, from *dis*, twice, and *oikos*, house; alluding to the flowers with stamens and those with the seed-bearing organs growing on different plants.

DIOECIOUS, when a plant bears female flowers on one individual, and males on another.

DIOMEDEA, *Cassini*. Named after Diomedea, the daughter of Phorbas. *Linn.* 19, Or. 2, Nat. Or. *Asteraceae*. A genus of ornamental shrubs, with silvery leaves: they succeed well in any rich light soil; and cuttings root freely in the same kind of soil, under a glass. *Synonymes*: 1, *Bupthalmum frutescens*; 2, *B. arborescens*.

argentea . . .	Yellow 6, G. Ev. S. 2	S. Amer.	. 1824

DIOMEDES. See *Narcissus*.

DION, *Lindley*. *Dis*, two, and *oon*, an egg, each scale bearing two ovules. *Linn.* 22, Or. 11, Nat. Or. *Cycadaceae*. A singular Mexican genus; the plant introduced to this country, and presented to the Horticultural Society, had a simple stem, like that of a *Zamia*, but buried in wool; bearing deep and light green pinnated leaves. A cone which accompanied the plant, consisted of woolly rigid two-lobed scales, collected into a cone the size of a child's head, bearing on each lobe a single nut about as large as a chestnut.

edule . . .	Green . 5, S. Ev. S. 3	Mexico	. 1844
-------------	------------------------	--------	--------

DIONÆA, *Linn.* Dione, one of the names of Venus. *Linn.* 10, Or. 1, Nat. Or. *Droseraceae*. This is a very singular little plant in respect to its leaves, which are of an anomalous form, and have a curious motion, by which they catch insects; whence the specific name, *Muscipula*, a fly-trap. The petiole of the leaf is winged. The extreme part is that which acts as a trap. As soon as the insect enters, the lobes of the leaf fold together, and remain so as long as the insect continues to struggle; but as soon as it is quiet, the leaf opens and permits it to escape. The plant thrives best in small pots, in peat earth, and some dwarf species of moss placed underneath in the pot; the pots should then be placed in a pan of water, and set in a cool place in the stove, with a glass over them, but not close, else they will be liable to damp. Seeds are sometimes produced, by which they may be increased, but the readier way is to divide the plants at the root. It has also been found, that if a leaf be taken off, and placed on damp moss, it will emit a young plant from its edge.

Muscipula . . .	White . 7, S. Her. P. ¼	Carolina	. 1788
-----------------	-------------------------	----------	--------

DIONON. See *Dion*.

DIOSCOREA, *Linn.* Named after Podacius Dioscorides, a famous Greek physician. *Linn.* 24, Or. 6, Nat. Or. *Dioscoreaceæ*. The yam is cultivated in tropical climates for the sake of the roots, which are used in a similar way to potatoes, and are much esteemed by the natives. They are chiefly climbing plants; and some have very handsome foliage. They all succeed well in a light rich soil, and are readily increased by dividing their roots. *Synonymes*: 1, *Dioscorea Batatas*, *D. japonica*; 2, *D. quaternata*.

DIOSCOREACEÆ, or **YAMS**. Twining shrubs, with large tubers, used for food, much in the same way as we use potatoes.

DIOSMA, *Linn.* From *dios*, divine, and *osme*, smell; the bruised leaves have an exquisite smell. *Linn.* 5, Or. 1, Nat. Or. *Rutaceæ*. This is a genus of truly beautiful, heath-like shrubs, growing from one to four feet high. To grow them well, they must have a mixture of peat and sand, and a little turfy loam in the bottom of the pot, over the shreds. Young cuttings, planted in sand, with a glass over them, will root freely, without any heat. See *Adenandra*, *Agathosma*, *Audouinia*, *Barysma*, *Coleonema*, *Dichosma*, and *Lincônia*.

DIOSPYROS, *Linn.* From *dios*, divine, and *pyros*, pear; resemblance of the fruit. *Linn.* 23, Or. 2, Nat. Or. *Ebenaceæ*. Ornamental and highly valuable timber trees, from fifteen to thirty feet high. The species grow in any light loamy soil, and may be increased by ripened cuttings planted in sand, under a glass. The European species, *D. Lotus*, produced that

famous fruit, which, according to the ancient romancers, caused oblivion. Some of the species are very remarkable for the hardness of the wood, such as *D. Ebenus*, *Ebenaster*, *Má-bola*, and *Melanoxylon*, and for the eatable quality of the fruit; the former is well known under the name of ebony and ironwood. The bark of *D. virginiana* is said to be febrifugal. The fruit of *D. Embryopteris* is so glutinous as to be used in Bengal for paying boats. *Synonyme*: 1, *D. edulis*.

DIDTIS, *Schreber*. From *dis*, double, and *ous*, an ear; the flowers possess two ear-like appendages at the base of the florets. *Linn.* 21, Or. 4, Nat. Or. *Chenopodiaceæ*. Shrubs of little beauty, thriving in any light soil, and increased by layers or cuttings, under a glass. *Synonyme*: 1, *Atriplex pedunculata*. See *Olethrus*.

ceratoides . . . Apetal 3, H. De. S. 2 Siberia . . . 1780

atriplicina 1, *candidissima*, *maritima*.

DIPHACA, *Loureiro*. From *dis*, twice, and *phake*, a lentil, or pea; the pods are composed of two one-seeded joints. *Linn.* 17, Or. 4, Nat. Or. *Fabaceæ*. An ornamental shrub, about eight feet high, nearly allied to *Dalbergia*. It requires the same treatment as other greenhouse plants. *Synonyme*: 1, *Dalbergia Diphaca*.

cochinchinensis . . . White 5, G. Ev. S. 3 China . . .

DIPHYES. See *Bolbophyllum*.

DIPHYLLEIA, *Michaux*. From *dis*, double, and *phyllon*, a leaf; in allusion to the stems bearing only two alternate leaves each. *Linn.* 6, Or. 1, Nat. Or. *Berberidaceæ*. A very pretty plant, growing freely in any rich light soil, and multiplied by divisions.

cymosa . . . White 5, H. Her. P. ½ N. Amer. . . 1812

DIPHÏSA, *Jaquin*. From *dis*, twice, and *physa*, a bladder; the pods are furnished with a membranous bladder on each side. *Linn.* 17, Or. 4, Nat. Or. *Fabaceæ*. An ornamental shrub, from six to ten feet high; the soil best adapted to it is a mixture of loam, peat, and sand. Young cuttings will root in sand, under a glass, in heat.

carthaginensis . . . Yellow 4, S. Ev. S. 8 Carthage 1827

DIPHYSCIUM, *Weber*. From *dis*, twice, and *physikon*, a vesicle; in reference to the shell of the theca being double. *Linn.* 24, Or. 5, Nat. Or. *Bryaceae*. A very little plant, found in woods, and on rocks in Alpine situations. The stems are exceedingly short, and grow in densely matted patches. *Synonyme*: 1, *Buzbarimia foliosa*—*foliosum*.

DIPLACHNE, *Beauvois*. From *diploos*, double, and *achne*, chaff. *Linn.* 3, Or. 2, Nat. Or. *Graminaceae*. An uninteresting species of grass, of simple culture. *Synonyme*: 1, *Festuca polystachya*—*fascicularis*.

DIPLACUS, *Nuttall*. From *dis*, two, and *plakos*, a placenta; alluding to the splitting of the capsule, to each valve of which is attached a large placenta, and under its edges are found the slender subulate seeds. *Linn.* 14, Or. 2, Nat. Or. *Scrophulariaceae*. A genus of very elegant plants, especially *D. punctatus*, which will prove a very great ornament to our gardens. The species will succeed well in rich sandy loam, and may be increased by cuttings. *D. punctatus* is at present rather scarce in this country. *Synonyme*: 1, *Mimulus glutinosus*.

glutinosus 1. Orange . 6, G. Ev. S. 3 California 1794
punctatus . . . Scarlet . 6, F. Ev. S. 3 California 1837

DIPLADENIA, *De Candolle*. From *diploos*, double, and *aden*, a gland; in allusion to the two tubercles which are found at the base of the ovary. *Linn.* 5, Or. 1, Nat. Or. *Apocynaceae*. M. Alphonse De Candolle, in his monograph upon this order, has separated these from the well-known Linnæan genus *Echites*. They are stove twiners, which seem to thrive best in rough heath mould, mixed with silver sand; whilst growing in summer, copious waterings do them no injury, but in winter, without caution in this respect, they are apt to damp off. They are propagated by cuttings of the ripened wood. *Synonymes*: 1, *Echites crassinoda*; 2, *Echites splendens*; 3, *Echites atropurpurea*; 4, *D. magnifica*.

DIPLÁSIA, *Richard*. From *diplozo*, to double; in reference to the glumes. *Linn.* 3, Or. 1, Nat. Or. *Cyperaceae*. A plant with little to recommend it, growing in any common soil, and increased by divisions.

karatifolia . Apetal. 8, S. Grass. 3 Guiana . . 1825

DIPLAZIUM, *Swartz*. From *diplozo*, to double; in allusion to the indusia being double. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceae*. A very handsome and ornamental genus of ferns. *D. auriculatum* forms a tree about ten feet high. The plants succeed well in loam and peat, and may be either increased by seeds or divisions; the latter is the more preferable method. *Synonymes*: 1, *Asplenium arboreum*; 2, *Asplenium decussatum*; 3, *Hemionitis esculenta*; 4,

A. frondosum; 5, *H. grandifolia*; 6, *Asplenium ambiguum*; 7, *A. plantagineum*; 8, *A. porrectum*; 9, *A. ambiguum*; 10, *A. striatum*; 11, *A. thelypteroides*.

DIPLOŃEMA, *Don*. See *Royena*.

DIPLOPAPPUS, *Cassini*. From *diploos*, double, and *pappos*, pappus; the fruit is furnished with a double row of bristles. *Linn*. 19, Or. 2 Nat. Or. *Asteraceae*. A very handsome, shrubby species, growing to the height of about two feet, producing its flowers in heads, with the rays rich lilac, and the disc a bright yellow. It succeeds well in sandy loam, and is increased by cuttings. It will grow and flower well in a hot, exposed situation in the open ground in summer, but requires the protection of a frame in winter.
 incanus . . Lil. yel. 8, F. Ev. S. 2 California . 1822

DIPLOPÉLTIS, *Endlicher*. From *diploos*, double, and *pelte*, a buckler; the double fruit. *Linn*. 23, Or. 1, Nat. Or. *Sapindaceae*. These plants require similar treatment to Cape plants, such as *Hebenstreitias*, striking freely from cuttings of the young wood, and will bear to be planted in the open border during the summer season.
 Hugelii . . Rose wht. 7, G. Her. P. 1 Swan R. 1837

DIPLOPHYLLUM, *Lehmann*. Derived from *diploos*, double, and *phyllon*, a leaf; in allusion to the two-leaved calyx. *Linn*. 2, Or. 1, Nat. Or. *Scrophulariaceae*. A border annual, the seeds of which need only be sown in the open border early in spring. *Synonyme*: 1, *Veronica Crista-galli*.
 veronicæforme 1. Blue 4, H. Tr. A. $\frac{1}{2}$ Caucasus . 1818

DIPLOSÁTERA, *Tansch*. See *Calliopsis*.

DIPLOSPORA, *De Candolle*. See *Canthium*.

DIPLOSTRĒGIUM, *De Candolle*. See *Osbéckia*.

DIPLOSTRĒPHIUM, *De Candolle*. See *Aster*.

DIPLOTÁXIS, *De Candolle*. From *diploos*, double, and *taxis*, a series; the seeds are disposed in two rows in each cell. *Linn*. 15, Nat. Or. *Brassicaceae*. Uninteresting annuals, which merely require sowing in the open border, where they will grow, flower, and produce their seed in abundance. *Synonymes*: 1, *Sisymbrium catholicum*; 2, *Sinapis crassifolia*; 3, *Sinapis eruroides*; 4, *Sisymbrium murale*; 5, *Sisymbrium pendulum*; 6, *Sisymbrium tenuifolium*; 7, *Sinapis virgata*—Barrelieri, catholica 1, crassifolia 2, eruroides 3, hispida, muralis 4, pendula 5, saxatilis, tenuifolia 6, viminea, virgata 7.

DIPLOTHĒMIUM, *Martius*. Derived from *diploos*, double, and *thema*, a spathe. *Linn*. 21, Or. 9, Nat. Or. *Palmaceae*. Ornamental plants, growing to the height of about ten feet, and requiring the same treatment as *Caryota* and other genera of the order. *Synonyme*: 1, *Cocos arenarius*.

DIPÓDIUM, *R. Broun*. From *dis*, two, and *pous* *podos*, a foot: referring to the threads of the pollen masses. *Linn*. 20, Or. 1, Nat. Or. *Orchidaceae*. A very curious, leafless plant, with

rather pretty purplish flowers. For culture and propagation, see *Bletia*. *Synonyme*: 1, *Dendrobium punctatum*.
 punctatum 1. Purplish 12, S. Ter. $1\frac{1}{2}$ N. Hol. . 1822

DIPORĒDIUM. See *Ochna*.

DIPSACACEÆ, or **TEAZLEWORTS**. Herbaceous plants, or under shrubs, natives of the temperate parts of the world. The common teazle is used by fullers in dressing cloth.

DIPSACUZÁMIA, *Benth*. See *Zamia*.

DIPSACUS, *Tournefort*. Supposed to be from *dipsao*, to thirst; in consequence of the leaves holding water; *dipsakos* is also the Greek name for the disease called diabetes, which is always accompanied by great thirst. *Linn*. 4, Or. 1, Nat. Or. *Dipsacaceae*. Curious species, some of which are pretty flowering plants, especially *D. pilosus*. They grow well in any common soil, and are readily increased by seeds. *D. fullonum* is extensively cultivated in the west of England, the dried heads of which furnish the teazle used by fullers in dressing cloth.

DIPTERACÁNTHUS. See *Ruellia*.

DIPTĒRIX, *Schreber*. From *dis*, double, and *pteria*, a wing; the two upper lobes of the calyx appear like two wings. *Linn*. 17, Or. 4, Nat. Or. *Fabaceae*. An ornamental tree, attaining the height of sixty feet. It requires to be grown in a loamy soil, and ripened cuttings root in sand, under a glass, in a moist heat. The seeds of this tree are the Tongo, or Tonquin-beans, so well known as having a pleasant scent to snuff. *Synonyme*: 1, *Barysma Tongo*.
 odorata 1. . Purple 5, S. Ev. T. 60 Guiana . . 1798

DIPTĒROUS, applied to anything which has two wings.

DÍRCA, *Linn*. Derived from *dirka*, signifying a fountain; in reference to the habitation of the plant. *Linn*. 8, Or. 1, Nat. Or. *Thymelæceae*. An ornamental little shrub, found growing in the marshes of North America. It succeeds well in sandy loam, and is propagated by layers or seeds. It is so tough that the twigs are used for baskets, &c.; whence the English name, leather wood.
 palástris . Yellow . 3, H. De. S. 6 Virginia . 1750

DÍRĒKA, *Decaisne*. See *Gesnera*.

DISA, *Linn*. Meaning unknown. *Linn*. 20, Or. 1, Nat. Or. *Orchidaceae*. A genus of interesting tuberous-rooted plants, thriving well in an equal mixture of peat, loam, and sand, and increased by separating the roots. They require to be very carefully watered when not in a growing state.

DISÁNDRA, *Linn.* Named from *dys*, difficult, and *aner*, an anther; the number of the anthers varies. *Linn.* 7, Or. 1, Nat. Or. *Scrophulariæ*. A small trailing plant, which, when raised, its pendent branches and little yellow flowers have a very pretty appearance. It will grow well in any rich light soil, and is propagated by divisions or cuttings, with or without a glass, in a shady situation.

prostrata . . . Yellow . 6, G. Ev. Tr. $\frac{1}{4}$ Madeira . 1771

DISCÁRIA, *G. Don.* From *diskos*, a disk; disk broad. *Linn.* 4, Or. 1, Nat. Or. *Rhamnææ*. A plant of easy culture, requiring a mixture of light loam and heath mould, and may be increased by cuttings of the half-ripened wood, planted in sand, and placed in heat.

australis . Yellow . 5, G. Ev. S. 2 N. Holland 1824

DISCHÍDIA, *R. Brown.* From *dis*, twice, and *schizo*, to split; application unexplained. *Linn.* 5, Or. 2, Nat. Or. *Asclepiadææ*. Ornamental plants, growing in any light sandy soil; and cuttings will root very freely in the same kind of soil, without any glass.

bengalensis . White . 9, S. Ev. Tr. 1 India . 1819

nummularia . White . 8, S. Ev. Tr. $\frac{1}{2}$ Amboyna .

DISCOID, anything dilated into something which may be compared to a disk.

DISCUS, or **DISK**, the fleshy annular process that surrounds the ovary of many flowers; also the surface of a leaf; also the centre of a head of flowers of *Compositæ*.

DISCUIENT, having the power to scatter the matter of tumours.

DISÉMMA, *Labillardière.* From *dis*, double, and *stemma*, a crown; the crown of the flower is double. *Linn.* 16, Or. 2, Nat. Or. *Passiflorææ*. A genus, comprising some splendid and

curious shrubs, requiring the same treatment, in culture and propagation, as *Passiflora*. *Synonymes*: 1, *Passiflora adiantifolia*, *Murucúa adiantifolia*; 2, *P. aurántia*, *M. aurántia*; 3, *Passiflora Herbertiana*, *Murucúa Herbertiana*. *adiantifolia* 1. Orange 7, S. Ev. Cl. 20 Norfolk Is. 1792

aurántia 2. . . Wt. red 7, G. Ev. Cl. 20 Australia .

Herbertiana 3 Gn. wt. 7, S. Ev. Cl. 30 N. Hol. . 1821

DISÉRMIS, smooth, without thorns.

DISOCÁCTUS, *Lindley.* From *dis*, two, *isos*, equal, and *cactus*. *Linn.* 12, Or. 1, Nat. Or. *Cactiææ*. This was formerly referred to *Cereus*, from which family it may, however, be readily known by the number of sepals being constantly twice two, and that of the petals the same.

It was introduced by George Üre Skinner, Esq., in 1839, to Sir Charles Lemon, Bart., M.P. It forms a graceful bush, from two to three feet high, but will, no doubt, attain a much larger size if trained against a trellis, and sufficient room allowed for it to spread; the flowers are of a deep pink colour; only one flower is produced at the extremity of each branch, but they open in succession for a considerable time, and are succeeded by beau-

tiful little blood-coloured berries, scarcely so large as the common sloe. A turfy loam, mixed with sharp sand and leaf mould, suits it best; when the plant is growing, a moist atmosphere is most suitable, but in winter it should be kept dry, with plenty of light. It may be increased by cuttings or seeds. *Synonymes*: 1, *Cereus biformis*, *Epiphyllum biforme*.

biformis 1. . Pink . 5, S. Ev. S. 3 Honduras . 1839

DISOMORPHOUS, two-shaped.

DISPARÁGO. See *Stæbe*.

DISPÉRIS, *Swartz.* From *dis*, two, and *pera*, a pouch; in allusion to the appearance of the two outer lateral segments of the perianth. *Linn.* 20, Or. 1, Nat. Or. *Orchidiææ*. A tuberous-rooted genus, requiring the same treatment as *Disa*.

capensis . . . Scarlet . 7, G. Ter. $\frac{1}{4}$ C. G. H. . 1816

cucullata . . . Purple . 6, G. Ter. $\frac{1}{4}$ C. G. H. . 1822

secunda . . . Purple . 6, G. Ter. $\frac{1}{4}$ C. G. H. . 1797

DISPÉRMUS, two-seeded.

DISPÓRUM, *Salisbury.* From *dis*, twice, and *poros*, a pore. *Linn.* 6, Or. 1, Nat. Or. *Melanthæææ*. Pretty species, which may be successfully grown in two-thirds peat and one-third loam; they will succeed in a warm border if carefully protected from severe frosts; they may be increased by dividing the roots, or by seeds. *Synonyme*: 1, *Uvularia chinensis*.

fálvum 1. . Brown . 10, G. Her. P. 1 China . 1801

parviflorum . Yellow . 7, G. Her. P. 2 Nepal . 1820

DISSÉCTA, lacinated, deeply cut into very fine segments.

DISSÉPMENTS, the partitions by which a seed-vessel is divided internally.

DISSODON, *Greville.* From *dis*, twice, and *odous*, a tooth. *Linn.* 24, Or. 5, Nat. Or. *Bryiææ*.

A genus of little, dark, and pale green plants, inhabiting, during summer, mountains and Alpine bogs. *Synonymes*: 1, *Splachnum Frœlichianum*, *S. reticulatum*; 2, *Weissia splachnoides*—*Frœlichianum* 1, *splachnoides* 2.

DISSOLÉNA, *Loureiro.* From *dis*, double, and *solen*, a tube; in allusion to the double tube of the corolla. *Linn.* 5, Or. 1, Nat. Or. *Apocynæææ*.

A pretty species, growing in rich light soil; and cuttings, planted in sand, under a glass, in heat, will soon root. *Synonyme*: 1, *Cérbera chinensis*.

verticillata . Wh. yel. 6, G. Ev. S. 4 China . 1812

DISTÁCHYON, two-spiked.

DISTÁFF THISTLE. See *Cárthamus lanatus*.

DISTÉNTUS, distended, inflated.

DÍSTICHOUS, two-rowed; producing leaves or flowers in two opposite rows.

DISTRÉPTUS, *De Candolle.* See *Elephántopus*.

DITÍDOLA, *Fries.* From *ditto*s, double, and *ioulos*, down; in reference to the downy nature of the pubescence. *Linn.* 24, Or. 9, Nat. Or. *Helvellæææ*. A species of *Fungi*, which grows upon dry wood, from autumn till spring. It is one of the species of dry rot, and very injurious to the timber on which the plants vegetate—*radicata*.

DITRICHÓMOMOUS, divided into twos or threes; a stem continually divided into double or treble ramifications.

DITANY OF CRETE. See *Origanum Dictamnus*.
DIURETIC, having the power of promoting the flow of urine.

DIURIS, R. Brown. From *dis*, double, and *oura*, a tail; alluding to the lateral lobes of the labellum. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. The species of this genus succeed well with the same treatment as *Disca*.

DIURNUM, daily.

DIVARICATE, growing in a straggling manner.

DIVERGENT, } growing far asunder; applied to

DIVERGING, } branches and leaves.

DIVI DIVI. See *Casalpinia coriaria*.

DIVI LADNER. See *Tabernaemontana dichstoma*.

DOCK. See *Rumex*.

DODARTIA, Linn. In honour of F. Dodart, M.D., a French botanist. *Linn.* 14, Or. 2, Nat. Or. *Scrophulariaceæ*. A species of little beauty, thriving in any light rich soil, and increased from seeds or divisions.

orientalis . Purple . 7, H. Her. P. 1½ Levant . 1752

DODDER. See *Cuscuta*.

DODECÁNDRIA. The eleventh class in the Linnean system of botany. From *dodeka*, twelve, and *aner*, a man. Plants with twelve stamens.

DODECÁNDROUS, having twelve stamens.

DODECÁTHEON, Linn. From *dodeka*, twelve, and *theos*, a divinity; twelve gods or divinities of the Romans; a name absurdly applied to a plant, native of a world the Romans did not know, and resembling in no particular any plant of their writers. *Linn.* 5, Or. 1, Nat. Or. *Primulaceæ*. Very ornamental plants when in flower, and well worthy a place in every collection. The species grow best in a light loamy soil, and are easily increased by dividing the roots.

DOORBA, DOORWA, or HURRYALEE. See *Cynodon Dactylon*.

DORÆMA, *D. Don*. From *dorema*, a gift or benefit. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. This is the gum ammoniac plant. "It grows principally on the plains between Yudecaust and Kumisha, in the province of Irak, without cultivation. The gum is so abundant that, upon the slightest puncture being made, it instantly oozes forth, even at the ends of the leaves." It will grow freely in ordinary garden soil, and is propagated by seeds.

ammoniacum Wht. yel. 6, H. Her. P. 2 S. Persia 1831

DORIA. See *Senecio Doria*.

DORONICUM, *Linn.* Altered from *Doronigi*, its Arabic name. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. An ornamental genus, and from the plants flowering early in spring, they are well deserving of cultivation; they grow in any garden soil, and may be increased with facility by dividing at the root. *Synonymæ*: 1, *D. orientale*. See *Diplacoma*, *Werneria*, *Arnica*, and *Senecio*.

DORTMÂNNA, *Don*. After one Dortmann, said to be a Dutch apothecary. *Linn.* 5, Or. 1, Nat. Or. *Lobeliaceæ*. The species of this genus are singular and beautiful plants, but require a good deal of care in cultivation. *D. lacustris* succeeds best planted in a pot of gravel, and placed in a pond or cistern, so that the plants may be about six inches under the water. The other species may be grown in a pot half filled with peat earth, and the rest with sphagnum, in which the plants must be set, and the pot placed in shallow water, so as not to immerse the plants. They may be increased by division. *Synonymæ*: 1, *Lobelia Dortmanna*; 2, *L. paludosa*.

lacustris 1 . Pa. blue 7, H. Her. P. 1 Brit. lakes.
paludosa 2 . Pa. blue 7, H. Her. P. 1 N. Amer.

DORYANTHES. Named by Correa de Serra, from *dory*, a spear, and *anthe*, flower; because of the long straight flower-stem. *Linn.* 6, Or. 1, Nat. Or. *Amaryllidaceæ*. Rather an ornamental plant, requiring a warm part of the greenhouse, or a cool part of the stove; the latter is preferable. It may be increased from suckers, which are seldom to be obtained, except by cutting a large plant down, or taking out the heart of the plant; in either case, it will throw out suckers.

excelsa . . Cream 7, G. Her. P. 20 N. S. W. . 1800

DORFCNIUM, *Tournefort*. From *dory*, a spear; the ancient plant was used to poison spears. *Linn.* 17, Or. 4, Nat. Or. *Fabaceæ*. Very handsome plants, of simple culture, succeeding best in a dry soil. They may be increased by seeds, which they ripen in abundance. *Synonymæ*: 1, *Lotus hirsutus*; 2, *D. ibericum*; 3, *L. parviflorus*; 4, *L. rectus*; 5, *L. subbiflorus*; 6, *D. monspeliense*, *Lotus Dorfgenicum*; 7, *D. hirsutum*, *incanum*, *Lotus tomentosus*, *sericeus*, *affine*. See *Convolvulus*.

DOSSFNIA, *Morren*. See *Chœrostylis*.

DOTHŒEA, *Fries*. Derived from *dothien*, a tubercle, and *eidos*, similar. *Linn.* 24, Or. 9, Nat. Or. *Helvellaceae*. Mostly dark species, growing upon stems of grass and leaves of trees—*alnea*, *betulina*, *Fumago*, *Geranii*, *Heraclei*, *Himantia*, *Potentilloe*, *P. reptantis*, *P. verna*, *Pteridis*, *Ramunculi*, *ribesia*, *Robertiana*, *Ulmæ*.

DOTS—may be pellucid, resinous, or hairy.

DOUBLE COCOA NUT. See *Lodotœa seychellarum*.

DOUGLÆSIA. Named by Dr. Lindley, some years ago, in compliment to Mr. Douglas, whose zeal in collecting seeds and plants, and whose untimely end have richly earned for him a niche in the long gallery of departed science. *Linn.* 5, Or. 1, Nat. Or. *Primulaceae*. This is a very beautiful, but scarce, little plant, growing pretty freely in peat and sand, and ripening its seed in small quantity. Mr. Douglas transmitted the seed, from which this interesting plant was raised, from the Rocky Mountains, where he first found it among the snow, and afterwards from California.

nummulâria.

DRACÆNA, *Linn.* From *dracaina*, a female dragon; the inspissated juice becomes a powder, like the dragon's-blood. *Linn.* 6, Or. 1, Nat. Or. *Liliaceae*. Very ornamental trees, well worthy of being cultivated in every collection of stove plants. They thrive well in a light, loamy soil; large cuttings root freely by being stuck in the tan, provided there be a strong heat. In Java, the root of *D. terminalis* is considered a valuable medicine in dysenteric affections. The substance called Gum Dragon, formerly used in medicine, is the juice of *D. Draco*. *Synonymes*: 1, *spicata*, *ternifolia*, *Wallichii*, *javanica*, *Cordylina Sieboldii*, *terminalis*, *albo-maculata*, *Sansevierâ javanica*; 2, *D. marginata*. See *Charlwoodia*, *Dianella*, *Phylloma*, and *Cordylina*.

DRÆCO. See *Dracæna Draco*.

DRACOCÆPHALUM, *Linn.* From *drakon*, a dra-

gon, and *kephale*, head; by the appearance of the heads of the flowers. *Linn.* 15, Or. 1, Nat. Or. *Lamiaceæ*. Most of the species are ornamental, and as such, they deserve a place in every garden. They succeed well in common garden soil. Some of the tender perennial kinds require the protection of a frame in winter, and, on that account, they ought to be grown in pots; they increase readily by dividing the roots. The annual kinds merely require sowing in a rich, light soil, in the open ground, where they will flower beautifully. *Synonyme*: 1, *D. grandiflorum*. See *Physostégia*, and *Cedronella*.

DRACONIS, spotted like a serpent.

DRACONTIUM, *Linn.* From *drakon*, a dragon; the stems are spotted like the skin of a snake. *Linn.* 7, Or. 1, Nat. Or. *Aracææ*. Curious species, delighting in a rich, light loam, and increased by dividing the roots. In India, the prepared root of *D. polyphyllum* is supposed to possess antispasmodic virtues, and is a valuable remedy in asthma. See *Calla*, *Simplocarpus*, *Arum*, *Amorphophallus*, and *Mônstera*.

polyphyllum.	Apetal.	5, S. Ev.	Cr. 2	India.	1759

DRACOPIS, *De Candolle*. From *drakon*, a dragon, and *opsis*, appearance. Florets singular. *Linn.* 19, Or. 3, Nat. Or. *Asterææ*. Grows freely in common garden soil, and is increased by seeds and division. *Synonymes*: 1, *Rudbeckia amplexicaulis*, *R. amplexifolia*, *R. perfoliata*, *amplexicaulis* 1 Yellow 7, H. A. 8 Louisiana 1793

DRACUNCULUS, *Tournefort*. See *Arum*.

DRAGON. See *Dracöntium*.

DRAGON-TREE. See *Dracæna Draco*.

DRAGON'S BLOOD. See *Pterocarpus Draco*, *Cálamus Draco*, and *Dracæna Draco*.

DRAGON'S-HEAD. See *Dracocéphalum*.

DRAKÆNA. See *Dorstenia Drakæna*.

DRAPARNALDIA, *Bory de St. Vincent*. In honour of J. P. R. Draparnald, a French botanist. *Linn.* 24, Or. 7, Nat. Or. *Confervæææ*. Small, bright green plants, found at all seasons in pools and rivulets—*glomerata*, *plumosa*, *tenuis*.

DRASTIC, applied to purgative medicines which act violently.

DREPANOCARPUS, *Meyer*. From *drepanon*, a sickle, and *karpos*, a fruit; alluding to the shape of the pods. *Linn.* 17, Or. 6, Nat. Or. *Fabæææ*. Rather an ornamental shrub, from six to ten feet high. For culture and propagation, see *Pterocarpus*. *Synonyme*: 1, *Pterocarpus lunatus*.

lunatus 1. White 6, S. Ev. S. 12 S. Amer. 1792

DREPANOPHYLLUM, *Kunth*. From *drepanon*, a sickle, and *phyllon*, a leaf; alluding to the falcate leaves. *Linn.* 5, Or. 2, Nat. Or. *Apiæææ*. A worthless, herbaceous perennial, growing in any soil; increased by divisions. *Synonyme*: 1, *Sium falcaria*—agræste 1.

DRIMIA, *Jaquin*. From *drimys*, acid; the juice of the roots is so acrid as to cause inflammation when applied to the skin. *Linn.* 6, Or. 1, Nat. Or. *Liliæææ*. An ornamental genus, when the plants are in flower; they require a mixture of sandy loam and leaf mould, or peat soil. When not in a growing state they require but little water, and when potted just before they begin to grow, they will flower freely. *Synonyme*: 1, *D. lanceifolia*, *Hyacinthus revolutus*, *Lachenátia reflexa*.

DRIMOPSIS, *Lindl.* From *drimia*, and *opsis*, resemblance. The plants resemble *Drimia*. *Linn.* 6, Or. 1, Nat. Or. *Liliæææ*. For culture and propagation refer to *Drimia*.

maculata. Green spot. 6, F. Bl. P. ¼ C. G. H. 1850

DRIMYS, *Forster*. From *drimys*, acid; the juice of the root causes inflammation when applied to the skin. *Linn.* 13, Or. 4, Nat. Or. *Magnoliæææ*. Valuable trees, from twelve to forty feet high, requiring a mixture of loam, peat, and sand; ripened cuttings would probably root if planted in sand, under a glass. Winter's bark, which resembles that of cinnamon, is the produce of *D. Winteri*. *Synonyme*: 1, *Wintera aromatica*.

chilensis.	White.	5, G. Ev.	T. 25	Chile.	1829
Winteri 1.	White.	5, G. Ev.	T. 35	Magellan	1827

DRINKER'S-NUT. See *Strychnos potatorum*.

DROFWORT. See *Spiræa filipendula*.

DRÓSERÁ. From *droseros*, dewy; the plants are beset with glandular hairs, which make them appear as if covered with dew. *Linn.* 5, Or. 5, Nat. Or. *Droseráceæ*. This is a most singular and beautiful genus of plants, whose leaves are ornamented with red glandular hairs, discharging from their ends a drop of viscid acrid juice. These hairs are so irritable as to contract when touched, imprisoning insects, after the manner of *Dionda Muscipula*. In their native state, they are found growing on mossy turfy bogs. The best way to grow them, is to plant them in small pots, about three parts full of peat earth, and some sphagnum placed on it; the plants should then be planted in the moss, and the pots placed in pans of water, and even then, the hardy species grow best in the greenhouse. They are all increased by seeds, which should be allowed to sow themselves. *Synonyme*: 1, *D. intermedia*.

DROSERÁCÆ, or SUNDEWS. An order of small herbaceous plants, all growing in damp places; many are covered with glandular hairs, which possess considerable irritability.

DRUMMÓNDIA, De Candoille. Named after Mr. Thomas Drummond, a well-known naturalist, and zealous collector of plants, chiefly in the United States; he died at Havannah, in March, 1835. *Linn.* 5, Or. 2, Nat. Or. *Saxifragáceæ*. This is a very pretty little plant, well adapted for the front of flower-borders, or to grow on rock-work. It thrives most luxuriantly in peat, though it succeeds in any light soil; divisions. *Synonyme*: 1, *Mitella pentandra*.

mitelloides. Yell. wish 6, H. Her. P. $\frac{1}{2}$ Rky. Mts. 1827

DRUNKEN DARNEL. See *Lólium temulentum*.

DRUPÁCÆ, or ALMOND-WORTS. An order of trees and shrubs separated from *Rosáceæ*, on account of bearing what is usually known as stone-fruit—the cherry, plum, peach, and other similar fruits belong to this order.

DRUPE, a kind of fruit, consisting of a fleshy, succulent rind, and containing a hard stone in the middle. See *Drupáceæ*.

DRÚSA, De Candoille. In honour of M. Le Dru, a French botanist and traveller. *Linn.* 5, Or. 2, Nat. Or. *Apiáceæ*. A hardy annual, the seeds of which merely require sowing in a warm situation—*oppositifolia*.

DRYÁNDRA, R. Brown. In honour of Jonas Dryander, a distinguished Swedish botanist. *Linn.* 4, Or. 1, Nat. Or. *Protæacæ*. A splendid genus of plants, nearly related to *Banksia*. All the species thrive well in an equal mixture of turfy loam, peat, and sand. The pots require to be well drained, and the potsheds broken very small, because the roots are fond of running among them. Cuttings taken off

at a joint, in August or September, and planted in sand, without shortening the leaves, will readily root if placed on a gentle hotbed (but not plunged), under a glass; but they must be covered, so as the frost cannot injure them. As soon as rooted they must be potted off, as the sand would injure the roots if they were too long in it; after being potted off, they should be placed in a close frame, and hardened to the air by degrees. The cuttings will do equally well if put in early in spring, just as they are beginning to push out young wood. See *Hemicklidia*.

DRYPETES. Named by Vahl, from *drypto*, to lacerate; plant spiny. *Linn.* 22, Or. 4, Nat. Or. *Euphorbiæcæ*. An ornamental shrub, about six feet high, growing in a mixture of loam and peat; cuttings will root in sand, under a glass, in heat. *Synonyme*: 1, *Schafferia lateriflora*.
crœcia 1 . . Orange 6, S. Ev. S. 6 W. Ind. . 1820
DRYPIS, *Linn.* From *drypto*, to tear; the leaves are armed with stiff spines. *Linn.* 5, Or. 3, Nat. Or. *Caryophyllæcæ*. This beautiful little plant is well adapted for ornamenting rockwork, in which situation it flowers in the greatest profusion. It may be increased by cuttings planted in sand, under a glass, or by seeds, sown in an equal mixture of loam, peat, and sand, and when the plants get of sufficient size, they ought to be planted on the top of rockwork, where they must not be suffered to get dry till they are well established.

DURIO, *Linn.* Duryon, in the Malay language, is the name of the fruit. *Linn.* 18, Or. 1, Nat. Or. *Sterculiaceæ*. This tree thrives well in a rich loamy soil; and cuttings, not too ripe, taken off at a joint, with their leaves entire, will root in sand, under a glass, in a moist heat. The fruit of this tree is about the size of a man's head, and is said to be the most delicious of all the fruits of India. The axil-like substance, which contains the kernel, is the eatable part of it, and most resembles cream; yet it is accompanied by such an intolerable stench, that, according to Rumphius and Valentyn, it is, by law, forbidden to throw them out, near any public path, in Amboyna. The smell is said to be similar to that of some putrid animal substances; yet all agree, that if the first repugnance is once overcome, no fruit is more agreeable than the *durion*. The fruit is also used as a bait to entrap the civet-cat; hence the specific name.

ECBOLIUM. See *Justicia Ecbolium*.

ECREMOCARPUS, Ruiz et Pavon. From *ekremes*, pendent, and *karpos*, fruit; the fruit is pendent. *Linn.* 14, Or. 2, Nat. Or. *Bignoniaceæ*. An exceedingly ornamental plant, well adapted for training over bowers, columns, trellis-work, &c., like clematis, honeysuckles, &c.; it should be planted in a mixture of sand, loam, and peat; cuttings root at once, in sand or soil, with or without a glass. See *Calampelis*.

longiflorus . . . Orange 7, G. Ev. Cl. 6 Peru . . . 1825

ECHÉANDIA, Ortega. Named after Greg. Echeandia, botanical professor at Saragossa. *Linn.* 6, Or. 1, Nat. Or. *Liliaceæ*. This singular plant was among a collection received by Sir Charles Lemon, in 1837, from Mr. John Rule, Superintendent of the Real del Monte Mines, Mexico, in the neighbourhood of which it is probably a native. It flowered in the greenhouse at Carlew, in June, 1839, and continued during July and August to send out a succession of five or six flowers daily. It produces seeds, by which it is increased. *Synonymes*: 1, *Conanthera Echeandia*, *Anthericum reflexum*, *Phalangium reflexum*.

terniflora 1 . . . Golden 7, G. Her. P. 3 Mexico . . . 1827

ECHEVERIA, De Candolle. In honour of M. Echeveri, author of the splendid drawings of

the Flora Mexicana. *Linn.* 10, Or. 4, Nat. Or. *Crassulaceæ*. Among succulents, this genus is one of great beauty. *E. gibbiflora* is disposed to grow rather straggling; nevertheless, it is worthy of a place in every collection, on account of its strong, shining leaves, and orange-scarlet flowers. To grow them well, they require a soil composed of sandy loam and a little peat, mixed with reduced rubbish of bricks, &c. At all seasons they should be cautiously watered, particularly in winter. They increase from cuttings, dried a few days before being put in the soil. *Synonymes*: 1, *Cotyledon cespitosa*; 2, *C. coccinea*; 3, *Pachyphylon bracteosum*; 4, *Sedum quitense*.

ECHINÆIS, Cass. See *Cirsium scleranthum*.

ECHINÆRIA, Desfontaines. From *echinus*, a hedgehog; the prickly heads may be fancied to resemble little hedgehogs. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. A curious little annual, growing in any common soil, and increased by division. *Synonymes*: 1, *Cenchrus capitatus*, *Sisleria echinata*.

capitata 1 . . . Apetal 7, H. Grass. ½ S. Eur. . . 1771

ECHINATED, covered with prickles, like an echinus, or hedgehog.

ECHINÉLLA, Agardh. From *echinus*, a hedgehog; bristly appearance of the plants. *Linn.* 24, Or. 7, Nat. Or. *Diatomaceæ*. Very minute species of green *Algae*, found in lakes, and, by some naturalists, believed to be animalculæ—*articulata*, *oblonga*, *rotata*.

ECHINOCÁCTUS, Salm-Dyck. From *echinus*, a hedgehog, and *cactus*; a name given by Theophrastus to a spiny plant. *Linn.* 12, Or. 1,

Nat. Or. *Cactaceæ*. These are plants of great beauty and interest, on account of their singular and grotesque structure, the arrangement of their spines, and the beauty of their flowers. The soil best suited for them is sandy peat, a little loam, and a little lime, or brick rubbish, all of which must be well mixed together. They must be watered very sparingly at all times, but more so in winter. They are increased from offsets, which must be dried a few days before being put in to strike. These plants, and *Mammillariæ*, are sometimes much infested with red spider, which is very troublesome. The effectual way of exterminating them, is to shed a little dry sulphur over the plant infested, and they will soon disappear, and as soon return, if not carefully watched. *Synonymes*: 1, *Cereus abnormis*; 2, *E. platyacanthus*, *Cactus latispinus*; 3, *Cereus cylindricus*; 4, *Cactus depressus*; 5, *Cereus gibbosus*; 6, *Cereus hystrix*; 7, *Cereus imbricatus*; 8, *Cactus inörtus*; 9, *Cactus erinaceus*; 10, *Cactus parvispinus*; 11, *Cactus recurvus*, *nobilis*; 12, *Echinocactus orthacanthus*; 13, *Astróphytum myriostigma*; 14, *Melocactus otogonus*; 15, *E. hamatacanthus*; 16, *E. visnaga*; 17, *Cactus scopæ*, *Cereus scopæ*. See *Melocactus*, *Cereus*, and *Echinopsis*.

ECHINOCHLOA, Beauvois. From *echinos*, a hedgehog, and *chloa*, grass; alluding to the prickly heads of flowers. *Linn.* 3, Or. 2, Nat. Or. *Graminææ*. Hardy annuals, fit only to be grown in botanic gardens. *Synonymes*: 1, *Panicum stagninum*; 2, *P. crás-gállii*.
crás-gállii 2 . Apetal 7, H. Grass. 1½ Brit. moi. fie.
setigera . Apetal 7, G. Grass. 1 E. Ind. 1820
commutata 1, *crás-cervi*, *echinata*, *erythrosperma*, *internèdia*, *stagnina*.

ECHINOPHORA, Tournesfort. From *echinos*, a hedgehog, and *phorea*, to bear; in allusion to the involucrem is covered with stiff spines. *Linn.* 5, Or. 2, Nat. Or. *Apiææ*. Rather interesting plants, succeeding in any common soil, and increased by dividing the roots.
spinosa . White 7, H. Her. P. 1 Eng., sea co.
tenuifolia . White 7, H. Her. P. 1 Apulia . 1731
trichophylla . White 7, H. Her. P. 1 Levant . 1820

ECHINOPOGON, Beauvois. From *echinos*, prickly, and *pogon*, a beard. *Linn.* 3, Or. 2, Nat. Or. *Graminææ*. A mere weed, of the simplest culture. *Synonyme*; 1, *Agróstis ovatus*—*ovatus*.

ECHINOPS, Linn. From *echinos*, a hedgehog, and *opsis*, aspect; in allusion to the hedgehog-like heads of flowers. *Linn.* 19, Or. 5, Nat. Or. *Asterææ*. Coarse plants, of considerable beauty, attaining from one to five feet high. They are well adapted for borders, on account

of their stiff growth; any common soil suits them, and young plants are obtained by dividing the roots. In Spain, they use the flower of *E. strigosus* for tinder. *Synonyme*: 1, *E. persicus*.

ECHINOPSIS, Zucc. From *echinos*, a hedgehog, and *opsis*, resemblance. *Linn.* 12, Or. 1, Nat. Or. *Cactaceae*. The plants are round and prickly. All the species resemble *Echinocactus*, and their cultivation is the same. *Synonymes*: 1, *Echinocactus leucacantha*, *Cercus leucacanthus*; 2, *E. obrepandus*; 3, *E. obrepandus purpurea*.

ECHINOSPERMUM, Swartz. From *echinos*, a hedgehog, and *sperma*, seed; the seeds are very prickly. *Linn.* 5, Or. 1, Nat. Or. *Boraginaceae*. These plants are not worth cultivating, except in general collections. *Synonymes*: 1, *Myosotis Lappula*; 2, *M. marginata*; 3, *M. virginica*.
virginicum 3. Blue . 6, H. B. 2 Virginia . 1699
barbatum, deflexum, Lappula 1, *marginatum* 2, *patumum, Redowskii*.

ECHINOSTACHYS. See *Pycnostachys*.

ECHITES, Linn. From *echis*, a viper; referring to the smooth, twining shoots. *Linn.* 5, Or. 1, Nat. Or. *Apocynaceae*. This is a most beautiful genus of evergreen twiners; they grow freely in a mixture of loam and peat, and are increased readily from cuttings in sand, under a glass. The bark of *E. antidyenterica* is astringent and febrifugal. *Synonymes*: 1, *Nerandra suberecta*. See *Aganosma, Dipladenia, Hamadryon, Parsonsia* and *Strophanthus*.

ECHIUUM, Linn. From *echis*, a viper; the seeds resemble the head of the viper. *Linn.* 5, Or. 1, Nat. Or. *Boraginaceae*. This is a very pretty genus of shrubs, growing from two to six feet high, in a mixture of loam and peat. Cuttings will root in the same kind of soil, under a glass; but they are more readily increased by layers, which soon take root if laid down in the young wood, with a little nick cut in the shoot. Seeds are frequently produced, from which they may also be increased. *Synonymes*: 1, *E. formosum*; 2, *E. grandiflorum*; 3, *E. hispidum, elegans*.

ECLÏPTA. From *eclipse*, to be deficient; the seed-crown and wing are wanting. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. Uninteresting annuals and biennials of easy culture—*erecta*, *latifolia*, *procumbens*, *prostrata*, *punctata*, *undulata*. See *Bellis*.

ECOSTATE, having no nerves on the leaf.

ECTASIS. See *Erica*.

ECTOCARPUS, *Lymbye*. From *ektos*, outside, and *karpos*, a fruit; the theca is not inclosed. *Linn.* 24, Or. 7, Nat. Or. *Fuacææ*. Mostly dark green marine productions, found in spring and summer—*brachiatus*, *distortus*, *granulosus*, *pusillus*, *tomentosus*, *siliiculosus atrovirens-ferruginus*.

ECTOSTROMA, *Fries*. From *ektos*, without, and *stroma*, a hair. *Linn.* 24, Or. 9, Nat. Or. *Moraceæ*? Very minute species, to be met with during summer and autumn on the *Iris* and decayed laurel leaves; whence their specific names—*Iridis*, *Lauri*.

EDDOES. See *Colocasia esculenta*.

EDENTULUS, not toothed.

EDWORTHIA, *Meyer*. In honour of M. P. Edgeworth, of the E. I. Co.'s service, and a great lover of botany. *Linn.* 8, Or. 1, Nat. Or. *Thymelacææ*. This is a genus closely allied to *Daphne*. The species require to be grown in two parts sandy loam and one part turfy peat, with good drainage and a liberal supply of water in summer, but carefully watered in winter. Increase is by cuttings planted in sand. *Synonymes*: 1, *Daphne papyrifera*, *E. papyrifera*.
chrysantha 1 . Yellow 6, G. Ev. S. 1 China . . . 1845

EDIBLE, eatable.

EDWARDSIA, *Salisbury*. In honour of Sydenham Edwards, a celebrated English botanical draughtsman. *Linn.* 10, Or. 1, Nat. Or. *Fabacææ*. A very ornamental genus of plants, which will survive our winters if planted against a warm wall, and protected from very severe frosts. They vary in height from four to twelve feet; they thrive best in sandy peat, and increase readily from cuttings. *Synonyme*: 1, *Sophora sericea*.

calycina 1, *distichophylla*, *gigantea*.

EICHËRNIA. See *Pontederia*.

EKEBERGIA. Sparmann named this genus in compliment to C. Gustavus Ekeberg, captain of a Swedish East Indian, who took him out to China. *Linn.* 10, Or. 1, Nat. Or. *Meliacææ*. A very ornamental tree, growing about twenty feet high; a mixture of loam and peat suits it, and young plants may be raised from cuttings, planted in sand, under a glass, in heat.

capensis . . . White . 7, G. Ev. T. 20 C. G. H. . . 1789

ELEAGNACÆE or **OLEASTERS.** A small order of trees and shrubs, usually covered with a silvery scurf. Several species of *Eleagnæa* bear eatable fruit, and the berries of *Shepherdia argentea*, called in N. America the "Rabbit Berry,"

hang like bunches of red currants, and are used for the same purposes.

ELÆAGNUS, *Linn.* From *elaia*, an olive, and *agnos*, a chaste tree; resemblance the tree bears. *Linn.* 4, Or. 1, Nat. Or. *Eleagnaceæ*. These are ornamental, largish-growing trees, or shrubs, of easy culture, thriving in any open soil, and are increased by layers or cuttings of the ripened wood, planted in a warm situation early in autumn. The fruit of *E. arborea* and *conferta* is eaten in Nepal; and in Persia the fruit of *E. orientalis* is used as a dessert, under the name of Zinzeyd. *Synonyme*: 1, *angustifolia*.

ELÆOCARPÆÆ. A small order now merged in *Tiliacææ*.

ELÆOCARPUS, *Linn.* From *elaia*, an olive, and *karpos*, a fruit; the fruit has been compared to an olive. *Linn.* 11, Or. 1, Nat. Or. *Tiliacææ*. Very beautiful plants, from ten to twenty feet high. *E. cyaneus* is excellently adapted for a conservatory. They grow best in a mixture of loam and peat, and ripened cuttings strike in sand or soil, under a glass, in a moderate heat; they are sometimes raised from seeds. *Synonyme*: 1, *E. reticulata*. See *Dicera* and *Frësia*.

ELÆODENDRON, *Jacquin.* From *elaia*, an olive, and *dendron*, a tree; the fruit is like that of an olive, and the seeds are oily. *Linn.* 5, Or. 1, Nat. Or. *Celastrææ*. This is an ornamental genus of plants, growing from three to twelve feet high; they delight in loam and peat, and cuttings root in sand, under a glass, in heat. *Synonymes*: 1, *Portenschlågria australis*, *Lamärckia dentata*; 2, *Schrebëra albens*, *Senecia glauca*, *Mangifera glauca*; 3, *Rubëntia olivina*; 4, *Cassine xylocarpa*; 5, *Ilex crœca*. See *Argania*.

ELÆOSÉLINUM, *De Candolle.* From *elaia*, an olive, and *selinum*, parsley. *Linn.* 5, Or. 2, Nat. Or. *Apiacææ*.

meoides	. Yellow 6, H. Her. P. 1 S. Eur.	1830
---------	--	------

ELÆIS. See *Elais*.

ELÆIS, *Jacquin.* From *elaia*, olive; the natives of Guinea express an oil from the fruit of this

plant, as the Greeks do from their olives; whence the name. *Linn.* 22, Or. 6, Nat. Or. *Palmacææ*. Beautiful species of palms, requiring a strong heat, and rich sandy loam to grow in, and may be increased by suckers. Palm oil is chiefly obtained from *E. guineensis*, and the best kind of palm wine is also said to be obtained from the same tree.

ELAPHOMYCES, *Nees.* From *elephas*, an elephant, and *mukes*, a fungus. *Linn.* 24, Or. 9, Nat. Or. *Helvellacææ*. Found on dry, heathy ground, &c.—*granulatus*, *muricatus*.

ELÄPHRIUM, *Jacquin.* From *eläphros*, contemptible; the wood being of no value. *Linn.* 8, Or. 1, Nat. Or. *Burseracææ*. A tallish-growing, ornamental tree, with white flowers; it succeeds well in peat and loam, and young plants are readily obtained from cuttings in sand or sandy mould, under a glass, in heat. *Synonyme*: 1, *Fagara Eläphrium*.

gläbrum	1 . . . White 6, S. Ev. T. 25 Carthage	1818
---------	--	------

ELÄTE, *Aiton.* A name adopted from the Greeks. *Linn.* 21, Or. 6, Nat. Or. *Palmacææ*. This is a fine palm, bearing fruit much like a wild plum. In the East Indies the people chew it like the Areca nut with the leaf of the betel pepper, and quicklime. Elephants eat the fruit-stalks with avidity, on account of their sweetness. In our stoves, to grow the plant well, it must have a strong heat and good rich loam; increased by suckers. See *Phänix*.

sylvëstris	. . . Green 5, S. Palm. 15 E. Indies	1763
------------	--	------

ELÄTERIUM, *Linn.* From *elater*, an impeller; in reference to the elastic seed-vessel. *Linn.* 21, Or. 1, Nat. Or. *Cucurbitacææ*. A singular genus of plants, on account of the elastic seed-vessel; they have little beauty, and require the same treatment as *Cucurbita*. See *Momördica*.

carthaginense	. Yellow 6, H. Tw. A. 4 Carthage 1823	
tamnoides	. . . Yellow 6, H. Tw. A. 4 Mexico	1820

ELÄTINE, *Linn.* From *elate*, signifying a fir in Greek; its leaves have been compared to those of the fir-tree. *Linn.* 8, Or. 4, Nat. Or. *Elätinacææ*. Curious little aquatic plants, of no beauty; they merely require sowing by the side of a pond or rivulet, in the open air. *Sy-*

nonymes: 1, *E. triandra*, *hexandra*, *Hydró-piper*. See *Lindária*.

Hydrópiper . . . White 8, H. Aq. A. † S. Eur. . . .
tripétala 1 . . . Flesh 8, H. Aq. A. † Brit., marshes.

ELATINACEÆ or **WATER-PEPPERS**. An order of little annuals growing in marshy places in all the four quarters of the world.

ELATOSTÉMA, *Endlich.* See *Bœhméria*.

ELCAÏJA. See *Trichília emética*.

ELDER. See *Sambucus*.

ELEGAMPANE. See *Corvisàntia Helèntum*.

ELECTUARY, a medicine of conserves and powders, of the consistence of honey.

ELÈGIA, *Thunberg*. From *elegos*, lamentation; in reference to the sad colour of the plants. *Linn.* 22, Or. 3, Nat. Or. *Restiàceæ*. The species of this genus are only worth cultivating in botanical collections; they grow in a loamy soil, and are multiplied by division—*juncæa*, *racemosa*.

ELEÏOTIS, *De Candolle*. From *eleios*, a dormouse, and *ous otos*, an ear; the leaves are shaped like the ears of a dormouse. *Linn.* 17, Or. 4, Nat. Or. *Fabàceæ*. A stove biennial, of no interest whatever. *Synonymes*: 1, *Hedýsarum sorðrium*, *Hállia soròria*, *Onobrychis soròria*—*soròria* 1.

ELEMI, *Gum.* See *Amyris hexandra*.

ELEMI, AMERICAN. See *Ecica*.

ELÈNGI. See *Mimàsops Elèngi*.

ELEÓCHARIS, *R. Brown*. From *helos*, a marsh, and *chairo*, to delight; in allusion to the place where the plants delight to grow. *Linn.* 3, Or. 1, Nat. Or. *Graminàceæ*. Mostly insignificant bog plants, which can only be recommended where there are botanical collections. *Synonymes*: 1, *Scirpus aciculàris*; 2, *S. multicaulis*.

acuta . . . Apetal 7, G. Grass. † N. Hol. . . . 1819

ténuis . . . Apetal 7, H. Grass. † N. Amer. . . . 1824
aciculàris 1, *ovàta*, *palàstris*.

ELEPHANTIASIS, a species of leprosy, in which the limbs become prodigiously swollen.

ELEPHANTOPUS, *Cassini*. From *elephas*, an elephant, and *pous*, a foot; the radical leaves resemble an elephant's foot. *Linn.* 19, Or. 5, Nat. Or. *Asteràceæ*. The plants of this genus possess but very little beauty; they grow in any common soil, and are multiplied from seeds and offsets. On the coast of Malabar, a decoction of the leaves and roots of *E. scaber* is given in cases of dysuria—*angustifolius*, *carolinianus*, *mollis*, *nudicaulis*, *nudiflorus*, *scaber*, *spicatus*, *tomentosus*.

ELEPHANTOSIS. See *Elephantopus*.

ELEPHANTUSIA, *W.* See *Phytélephas*.

ELEPHANT APPLE. See *Feròvia*.

ELEPHANT'S-FOOT. See *Elephantopus*.

ELEPHANT'S-FOOT. See *Testudinària Elephantipes*.

ELEUTÈRIA. See *Cròton Eleutèria*.

ELEUTHERINE, *Herbert*. *Linn.* 3, Or. 1, Nat. Or. *Iridàceæ*. This plant is figured in the Botanical Magazine as *Márica plicàta*, and named in Sweet's "Hortus Britannicus" as *Sisyrinchium latifolium*, to neither of which genera it seems to belong. *Synonymes*: 1, *Márica plicàta*, *Sisyrinchium latifolium*.
anómala 1 . . . White 4, G. Bl. P. 1 † C. G. H. . . . 1779

ELEUTHERA BARK. See *Cascarilla Eleutèria*.

ELEUTHERIA, *Palis*. See *Néckera*.

ELEVATED, anything that rises above the surface.

ELICHERYSUM. From *helios*, sun, and *chrysos*, gold; in allusion to the brilliant flowers. *Linn.* 19, Or. 2, Nat. Or. *Asteràceæ*. This genus is greatly admired on account of the beautiful flowers of some of the species. The soil in which they grow best is a mixture of three parts peat and one part sandy loam. Cuttings will strike in the same kind of soil if they are taken off at a joint; some of the species seed freely, from which they may be increased. *Synonymes*: 1, *Gnaphalium arenarium*; 2, *G. acuminatum*; 3, *G. angustifolium*; 4, *G. apiculatum*; 5, *G. arboreum*; 6, *G. arenarium*; 7, *G. candidissimum*; 8, *G. cephalotus*; 9, *G. congestum*; 10, *G. cónicum*; 11, *G. crassifolium*; 12, *G. crispum*; 13, *G. cymosum*; 14, *G. dasyanthum*; 15, *G. diosmifolium*; 16, *G. discolor*; 17, *G. divaricatum*; 18, *G. ericoides*; 19, *G. fetidum*; 20, *G. flaccidum*; 21, *Astelma fruticans*, *G. fruticans*, *grandiflorum*; 22, *G. grandiflorum*; 23, *G. graveolens*; 24, *G. helianthemifolium*; 25, *E. splendens*; 26, *G. ignescens*; 27, *G. italicum*; 28, *G. lasiocaulon*; 29, *G. maritimum*; 30, *G. odoratissimum*; 31, *G. orientale*; 32, *G. pátulum*; 33, *G. rutilans*; 34, *G. ELISENA, Herbert. An ancient name of romance. *Linn.* 6, Or. 1, Nat. Or. *Amaryllidæceæ*. This splendid species will form a welcome addition to the cultivators of bulbous plants. It will succeed well with the treatment commonly given to *Pancratiums*, and the like.

longipétala . . White 4, S. Bl. P. 3 Lima . . 1837

ELIXIR OF LOVE. See *Grammatophyllum speciosum*.

ELLOBOCÆRPUUS, Kaulfuss. Derived from *en*, in, *lobos*, a pod, and *karpus*, fruit; in reference to the divisions of the fronds. *Linn.* 24, Or. 1, Nat. Or. *Polypodiæceæ*. An ornamental species of fern, of considerable beauty; it grows in wet loamy soil, and is increased by dividing the roots. 1, *Ceratopteris thalictroides*.

oleraceus 1 . Brown 8, S. Her. P. 1½ Tranqueb. 1818

ELLIÓTTIA, Nuttall. In honour of Stephen Elliot, a North American botanist. *Linn.* 8, Or. 1, Nat. Or. *Ericæceæ*. An ornamental species, succeeding best in a little sandy loam mixed with peat; it is increased by layers.

racemosa . White 6, F. Ev. S. 2 Georgia . .

ELLIPSOID, like an ellipsis.

ELLIPIC-LANCEOLATE, a form between elliptic and lanceolate.

ELLISIA, Linn. In honour of J. Ellis, F.R.S., a distinguished English naturalist. *Linn.* 5, Or. 1, Nat. Or. *Hydrophyllæceæ*. A curious little species, of very easy culture.

Nyctelea . White 7, H. A. ½ Virginia . 1755

ELM GALLS are produced by the punctures of *Aphis ulmi*.

ELM, SPANISH. See *Cordia Gerascanthus*.

ELM TREE. See *Ulmus*.

ELÛDEA, Richard. From *clodes*, a marsh; the habitation of the plants. *Linn.* 3, Or. 3, Nat.

Or. *Hydrocharidæceæ*. Interesting aquatics; for culture, &c. see *Nymphæa*.

guianensis . White 7, S. Aq. A. ½ Guiana . . 1820

pulchella . White 7, S. Aq. A. ½ E. Ind. . . 1831

ELONGATED, lengthened.

ELSHOLTZIA, Willdenow. In honour of J. S. Elsholtz, a Prussian botanist. *Linn.* 14, Or. 1, Nat. Or. *Lamiæceæ*. The species are not ornamental, and may be referred to *Hyssopus* for culture, &c. *Synonyme*: 1, *Hyssopus cristatus*.

cristata . . Pink . 6, H. A. 1½ Siberia . 1789

paniculata 1 . Pink . 7, H. B. 2½ E. Ind. . 1820

ocymoides.

ELVELLÆCEÆ. See *Helvellæceæ*.

ELYMUS. According to *Linnæus*, it is named from *elyo*, to cover. *Linn.* 3, Or. 1, Nat. Or. *Graminæceæ*. The plants of this genus are of little beauty or interest, except in botanical collections; they grow in any soil, and are increased by seeds or divisions. *Synonyme*: 1, *Asperella hystrix*.

- crinitus . . Apetal 6, H. Grass. 1½ Smyrna . . 1806

- mexicanus . Apetal 7, H. Grass. 2½ Mexico . 1823
- arenarius, canadensis, Cæput-Medusæ, Dahuricus, europæus, glaucifolius, hordeiformis, intermedium, juncæus, philadelphicus, pseudo hystrix, racemosus, sabulosus, sibiricus, striatus, tener, villosus, virginicus.

ELYNA, Schrader. Supposed to be from *elyo*, to cover. *Linn.* 3, Or. 1, Nat. Or. *Graminæceæ*. A dwarf species of grass, of little interest, and very easy culture. *Synonymes*: 1, *Carex Belardi*, *mysuroides*.

spicata 1 . . Apetal . 6, H. Grass. ½ Europe . 1810

ELYTRARIA, Vahl. From *elytron*, an envelope; in allusion to the scaly stem. *Linn.* 2, Or. 1, Nat. Or. *Acanthæceæ*. A genus of uninteresting stove biennials, growing in sandy peat. *Synonyme*: 1, *Justicia acutis*—caulescens, crenata 1, imbricata, lyrata, marginata, ramosa, virgata.

EMARGINATE, having a small notch at the end.

EMBEDDEN GROATS are oats freed from their shells, and kiln dried, and are well known in a sick room.

EMBELIA, Linn. In Ceylon, the plant is called *Ambelia*. *Linn.* 5, Or. 1, Nat. Or. *Myrsinæceæ*. A fine East Indian tree, growing twenty feet high; loam and peat mixed suit it, and young plants are readily obtained from cuttings in sand, under a glass, in heat. The plant is said to be cathartic.

robusta . Wht. grn. 6, S. Ev. T. 20 E. Ind. . . 1823

EMBLICA, Gaertner. The name of *E. officinalis* in the Moluccas. *Linn.* 21, Or. 10, Nat. Or. *Euphorbiæceæ*. Interesting evergreen shrubs, growing from three to twelve feet high; a mixture of peat and sand suits them. Cuttings root readily in sand, under a glass, in heat. *Synonymes*: 1, *Phyllanthus Emblica*; 2, *P. racemosus*.

- officinalis 1 . Pa. yel. . 7, S. Ev. S. 10 E. Ind. 1768
- racemosa 2 . Grn. yel. . 7, S. Ev. S. 2 E. Ind. 1793

EMBOSSÉD, projecting from the surface, like the boss or umbo of a round shield or target.

EMBÓTHRIUM, *Forster*. From *en*, in, and *bothrion*, a little pit; in allusion to the anthers. *Linn.* 4, Or. 1, Nat. Or. *Proteaceæ*. This is described as a very handsome genus, growing about three feet high; like most of the *Proteaceæ*, it delights in sandy peat, and cuttings in sand or soil, readily produce roots. See *Lomátia* and *Stenocárpus*.

coccineum . . Red . . 4, G. Ev. S. 3
 lanceolátum . Grn. yel. 4, G. Ev. S. 2½ Chile . 1850
 strobilium . Grn. yel. 4, G. Ev. S. 8 N. Hol. 1824

EMBRACING; a leaf is said to embrace a stem when it clasps it round with its base.

EMBRYÓPTERIS. See *Diospýros*.

ÉMERUS. See *Coronilla Émerus*.

EMETIC, that which produces vomiting.

EMEX, *Necker*. An anagram of *Rûmex*. *Linn.* 6, Or. 3, Nat. Or. *Polygonaceæ*. This species is only worth cultivating in general collections. *Synonyme*: 1, *Rûmex spinósus*.
 spinósus . . Green 7, H. Tr. A. 1 Candia . 1556

EMÍLIA, *Cass.* See *Cacúlia*.

EMMENAGOGUE, any medicine that promotes menstruation.

EMOLLIENT, softening.

EMPALEMENT. See *Perianth*.

EMPETRÁCEÆ, or **CROWBERRIES**. An order of small, heath-like, evergreen shrubs, closely related to Spurge-worts, and bearing small sub-acid berries, which are eaten in the countries where they grow wild.

EMPÉTRUM, *Linn.* From *en*, upon, and *petros*, a rock; alluding to the place of growth. *Linn.* 22, Or. 3, Nat. Or. *Empetraceæ*. These are interesting dwarf plants, of easy culture, delighting in elevated, and particularly exposed situations, on dry, barren, moorish, or even boggy soil. The little berries they produce are eaten by children, but are not wholesome if eaten in large quantities. See *Coréma*.

nigrum . . Apetal. 4, H. Ev. S. 1 Brit., moi. hea.
 scútium . Apetal. 5, H. Ev. S. ½ Scot., moi. hea.
 rubrum . . Brn. pur. 5, H. Ev. S. 1 S. Amer. 1833

EMPLEURUM, *Solander*. From *en*, in, and *pleuron*, the membrane which envelopes the lungs; the seeds are attached to a coriaceous membrane. *Linn.* 21, Or. 4, Nat. Or. *Rutaceæ*. A good greenhouse plant, with pretty pinkish flowers. It grows about three feet high; for culture, &c., see *Diósma*.

serrulátum . Pink . 6, G. Ev. S. 3 C. G. H. . 1774

EMPÛSA, *Lindley*. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. *Synonyme*: *Malaxis lancifolia*.
 paradóxa . . Yellow . 9, S. Epi. ¼ Nepal . . 1839

EMULSIONS, medicines made of bruised oily seeds and fluid.

ENARTHROCÁRPUS, *Labillardière*. From *ennea*, nine, *arthron*, a joint, and *karpos*, fruit; the pod has nine or ten seeds in the lower joint. *Linn.* 15, Nat. Or. *Brassicaceæ*. These are insignificant hardy annuals, only fit for botanical collections. *Synonyme*: 1, *Ráphanus pterocárpus*.

lyrátus . . Yel. pur. 7, H. A. ½ Alexandria 1836
 acúatus, *pterocárpus* 1.

ENCALÝPTA, *Hedwig*. From *en*, within, and *kalypter*, a covering; the calyptra is usually large, entirely enclosing the theca. *Linn.* 24, Or. 5, Nat. Or. *Bryaceæ*. Small, mostly greenish plants, found at all seasons on mountains, moist rocks, &c. *Synonyme*: 1, *Bryum extinc-tórium*—ciliata, alpina, cóncolor, rhaptozápa, streptocápa, vulgáris 1. See *Glyphomítrion*.

ENCÉLLA, *Adanson*. Derived from *egchelson*, a little eel; in allusion to the appearance of the seeds. *Linn.* 19, Or. 3, Nat. Or. *Asteraceæ*. Very pretty dwarfish shrubs, growing best in loamy soil, or loam and peat mixed. Cuttings strike with ease in sand, under a glass, if not over-watered. *Synonymes* 1, *Pallásia halimifolia*; 2, *P. grandiflora*.

canescens 1 . . Orange 7, G. Ev. S. 1½ Peru . . 1786
 halimifolia 2 . Yellow 7, G. Ev. S. 1½ Mexico . 1826

ENCEPHALÁRTOS, *Lehm.* From *enkephale*, in the top, and *artos*, bread; from the use made of the plant by the Caffres. See *Zámia*.

ENCHANTER'S NIGHTSHADE. See *Circóa*.

ENCÉLIUM, *Agardh*. From *en*, within, and *koilos*, hollow; the fronds are tubular and hollow. *Linn.* 24, Or. 7, Nat. Or. *Fucaceæ*. Plants found during the summer and autumn on the sea-coast. *Synonyme*: 1, *Úlva fistulosa*—bulbósum, *Lyngbyanum* 1.

ENCYCLIA, *Hooker*. From *egkylleo*, to wrap round; form of lip. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. A genus separated from *Epidendron*, on account of the curious form of the lip, which wraps over the column. The cultivation is precisely the same as for *Epidendron*. See *Epidéndrum*.

viridiflora . . Green 2, S. Epi. 1 Rio Janeiro . 1827

ENDIVE. See *Cichórium endívia*.

ENDOCARP, the inner lining of fruits, which forms the cells.

ENDOCÁRPON, *Hedwig*. From *endon*, within, and *karpos*, a fruit; the receptacles are deeply imbedded in the leaf. *Linn.* 24, Or. 8, Nat. Or. *Parmeliaceæ*. Green and greyish species, found most plentiful in summer, on rocks. *Synonyme*: 1, *Lichen fuscéllus*—complicátum, euplocum, *Hedwigii*, láchneum, lætevirens, leptophyllum, macrocápon, miniátum, pállidum, parasíticum, psaromoldes, pulchellum, rufóviréscens, rugósum, samarágdulum, sínópicum, sorediátum, sulphúreum, tephroides 1, *Weberi*.

ENDOGENS, or **MONOCOTYLEDONES**. A great natural class of plants, of extremely diversified habits, but which all agree in constantly developing their new woody matter in the interior of the trunk; the palm-tree and grasses may be taken as examples.

ENDOPLÉTRA, the inner coat of seeds, under the spermodermis.

ENDÓPTERA, *De Candolle*. From *endon*, within, and *pteron*, a wing. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. *Synonymes*: 1, *Crépis áspera*, *Barkháusia muricáta*; 2, *Crépis Dioscórídís*, *Crépis pátula*—áspera 1, *Dioscórídís* 2.

ÉNÉRVIS, having no veins.

ENGLISH MERCURY. See *Chenopódium Bónus Héuricus*.

ENGLISHMAN'S FOOT. See *Plantago major*.
ENHYDRA, De Candolle. See *Meyera sessilis*.
ENKIANTHUS, Loureiro. From *enkous*, pregnant, and *anthos*, a flower; the flowers are swollen. *Linn.* 10, Or. 1, Nat. Or. *Ericaceæ*. Most beautiful greenhouse plants, which have been considered difficult to propagate. The difficulty is now removed, as ripened cuttings root readily, planted in pots of sand, and placed under a handglass, without bottom heat. The best soil for them is an equal mixture of sandy loam and peat, and care must be taken not to over-water them, when not in a growing state. When they become pretty large they are the greatest ornament for the greenhouse or conservatory.
 quinqueforus . Pink . 5, G. Ev. S. 2 China . 1812
 reticulatus . . Pink . 1, G. Ev. S. 3 China . 1822
ENNEANDRIA. Class nine in Linnæan botany, comprising all plants whose flowers have nine stamens.
ENODIS, without knots, smooth.
ENSATE. See *Iridaceæ*.
ENSATE, or ENSIFORM, shaped like a sword, with a straight blade.
ENSLËNIA, G. Don. Named in honour of Aloysius Enslén, an excellent botanist. *Linn.* 5, Or. 2, Nat. Or. *Asclepiadaceæ*. Grows in common light soil.
 albida. . . White 7, H. Her. Cl. Virginia . 1828
ENTADA, Adanson. The name given to one of the species in Malabar. *Linn.* 23, Or. 1, Nat. Or. *Fabacææ*. Ornamental stove climbers, of easy culture; loam and peat are the best soil for the plants, and sand for cuttings, in which they soon take root, if under a glass, in heat. The natives use the seeds of *E. Purseetha* for washing the hair. *Synonymes:* 1, *Adenanthera scandens*; 2, *Mimosa scandens*; 3, *M. Entada*; 4, *M. polystachya*; 5, *M. scandens*.
 Adenanthera 1 White 4, S. Ev. Cl. 20 S. Sea. Isl. 1817
 Gigalbbium 2 . White 5, S. Ev. Cl. 20 W. Ind. . 1819

 polystachya 4 . White 4, S. Ev. Cl. 25 W. Ind. . 1816
 Purseetha 5 . White 4, S. Ev. Cl. 20 E. Ind. . 1780
ENTELEA, R. Brown. From *enteles*; alluding to the stamens being all perfect. *Linn.* 13, Or. 1, Nat. Or. *Tiliacææ*. These plants are well worth cultivating; they thrive best in garden loam mixed with a little sandy peat, and are propagated by cuttings in sand.
 arborescens . White 5, G. Ev. T. 25 N. Zeal. . 1820
 palmata . . White 5, G. Ev. S. 5 N. Zeal.
ENTOPHYTES. See *Uradinacææ* and *Mucoracææ*.
ENTEROMORPHA, Link. From *enteron*, entrail, and *morphe*, form; appearance of plants. *Linn.* 24, Or. 9, Nat. Or. *Confervecææ*. Found in pools and the ocean—*cornucopia*, *Linkiana*. See *Solènta*.
ENTOSTHODON, Schw. From *entosth*, within, and *odon*, a tooth; from the insertion of the peristome. See *Weissia*.
EPACRIDACEÆ, or EPACRIDIS. Small shrubs and trees, remarkable for the beauty of their flowers. They resemble heath-worts in their habits, and abound in the Indian archipelago, Australia, and Polynesia, just as heaths do in

the Cape of Good Hope. The berries of some kinds are eatable.
EPACRIS, Forster. From *epi*, upon, and *akros*, the top; in reference to the species growing on the tops of hills. *Linn.* 5, Or. 1, Nat. Or. *Epacridacææ*. Very elegant greenhouse plants, growing in general from two to four feet high; they grow best in a very sandy peat soil, and the rougher and more turfy soil is, the better the plants will thrive. If the plants are to be turned out of doors from the greenhouse in summer, they ought, just before, to be shifted into fresh pots and soil, otherwise, the roots being so fine, the hot sun against the pots is apt to destroy the points of them, and frequently kills the plant altogether. Cuttings taken from the tips of the young shoots, and planted in sand, under a glass, in autumn, winter, or spring, will root readily; but they will not strike so freely in summer. When rooted they should be potted singly in small pots, and set in a close frame, and hardened to the air by degrees. See *Lysinèma*.

EPHEDRA, Linn. The Greek name for the herb* horsetail; because of the resemblance. *Linn.* 23, Or. 13, Nat. Or. *Gnetacææ*. This is a curious genus of plants, succeeding in any common garden soil, and young plants are obtained by layering the shoots or branches. The berries ripen in July and August; they are sweetish, mucous, and leave a little heat in the throat. They are eaten by the Russian peasants, and by the wandering hordes of all Great Tartary.

EPHËMERIS, thing of a day's continuance.
EPHËMERUM. See *Lysinèchia Ephëmerum*.
EPHËLIS, W. See *Maytåba*.
EPICARP, the outside covering of a fruit.
EPIDENDRUM, Linn. From *epi*, upon, and *dendron*, a tree; the plants are usually found growing on the branches of trees. *Linn.* 20, Or. 1, Nat. Or. *Orchidacææ*. This is a very extensive genus of *epiphytes*, many of which

are highly deserving of culture, either for the beauty or delicious fragrance of their flowers. They thrive best when grown in a good strong heat, and a plentiful supply of water; they may be potted, and otherwise treated as *Stanhöpea*. *Synonymes*: 1, *Epidéndrum ellipticum*; 2, *E. ciliäre*; 3, *E. lineatum*; 4, *E. anceps*; 5, *Epihècia glauca*; 6, *Encyclia patens*; 7, *Hormidium uniflorum*; 8, *Encyclia viridiflora*; 9, *Epidéndrum ramosum*; 10, *Parkinsonianum aloifolium*; 11, *Encyclia macrostachya*; 12, *crassifolium*; 13, *rubro-cinctum*; 14, *polyanthum*; 15, *cepiforme*; 16, *ochroleucum*; 17, *alatum*; 18, *papillosum*; 19, *leiodubrum*; 20, *linearifolium*; 21, *Grahamii*; 22, *E. marginatum*; 23, *E. basilare*. EPIDERMIS, the outer skin of a plant.

EPIGAEA, *Linn.* From *epi*, upon, and *gaia*, the earth; alluding to the trailing habit of the plant. *Linn.* 10, Or. 1, Nat. Or. *Ericaceae*. These are very pretty trailing plants, and to grow well, they require a sandy peat soil, mixed with a very little loam, and are most readily increased from layers.

repens White. 7, H. Ev. Tr. 1/2 N. Amer. . 1736
 rubicunda Red . 3, H. Ev. Tr. 1/2 N. Amer. . 1836

EPILOBNIUM. From *epi*, upon, and *gynae*, a woman. Construction of interior of flower. *Linn.* Or. Nat. Or. *Vacciniaceae*. Handsome shrubs nearly related to *Thibaudia*, and requiring similar treatment. Increase is by cuttings. *Synonymes*: 1, *Thibaudia acuminata*, *Agapetes acuminata*.

acuminatum 1. Red . 4, S. Ev. S. 4 Silhet . . 1856
 leucobotrys White 5, G. Ev. S. 3 Bengal . . 1858

EPILOBNIUM, *Linn.* From *epi*, upon, and *lobos*, a lobe; the flowers have the appearance of being seated on the top of the pod. *Linn.* 8, Or. 1, Nat. Or. *Onagraceae*. Many of the species of this genus are very ornamental, as *E. angustifolium*, while a few others, such as *E. montanum*, are mere weeds. They all grow well in common soil, and are either increased by seeds, or by dividing the roots. *Synonymes*: 1, *E. Halleri*; 2, *E. mollis*; 3, *E. squamatum*.

EPIPHORA, *Lindley*. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. An epiphyte from South Africa with fragrant bright yellow flowers, streaked with red; it approaches very near the genus *Polystachya*.
 pubescens . . . Brn. yel. 5, S. Epi. 1 Delagoa Bay 1838

EPIPHYLLOUS, growing upon the leaves.

EPIPHYLLUM, *Haworth*. From *epi*, upon, and *phyllon*, a leaf; alluding to the flowers growing from the flat branches, which appear like leaves. *Linn.* 12, Or. 1, Nat. Or. *Cactaceæ*. These splendid-flowering plants are the pride of every well-furnished garden. Their culture and propagation are the same as that recommended for *Cereus*, and the other genera of this order. *Synonymes*: 1, *Cactus phyllanthus*; 2, *C. phyllanthoides*; 3, *C. speciosa, elegans*; 4, *C. truncata*; 5, *Cereus Russellianus*; 6, *C. crenatus*; 7, *C. oxyptalon*; 8, *C. biformis, Discocactus biformis*; 9, *Phyllocactus angulifer*; 10, *P. caulorhizus*.

EPIPHYTES, plants which grow upon other plants without deriving any nutriment from them.

EPIPOGON. See *Limodorum* and *Satyrium*.

EPISCIA, *Martius*. From *epi*, upon, and *skia*, a shadow; on account of the plants delighting in shady places. *Linn.* 14, Or. 2, Nat. Or. *Gesneraceæ*. A genus nearly related to *Besleria*, and requiring the same treatment.

bicolor . . . Purple 7, S. Tr. P. 1 N. Grenada 1847
 melittifolia . . . Red. 4, S. Her. P. 1 W. Indies.

EPISTAPHIUM, *Humboldt and Kunth*. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. A genus of very singular terrestrial Orchids.

sessiliflorum . . . Purple. 2, S. Ter. 1 Sta. Martha. 1845

EPISTOMEUS, spigot-shaped.

EPITHECIA, *Knowles and Westcott*. From *epitheke*, an appendage; in allusion to the shape of the flowers. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*.

glauca . . . Grn. pur. 6, S. Epi. 1 Mexico.
 limbata . . . Yel. brn. 8, S. Epi. 1 R. Folechio. 1843

EPITHECIUM. See *Epidendrum*.

EQUAL, applied to petals and sepals when they are equal in size and shape with each other.

EQUESTRIS, fancied resemblance to a horse's head.

EQUIDISTANT, equally distant.

EQUILATERAL, having equal sides.

EQUISETACEÆ OR **HORSETAILS**. An order of well-known plants found in ditches, rivers, damp places, and road sides in most parts of the world, some of the kinds are called dutch rushes, and are used for polishing furniture.

EQUSETUM, *Linn.* From *equus*, a horse, and *seta*, hair; in allusion to the fine hair-like branches. *Linn.* 24, Or. 2, Nat. Or. *Equisetaceæ*. Although looked upon as mere weeds, they have a very interesting aspect when seen growing in their natural situations; they are found in boggy places, and multiplied by divisions—*arvense, Drummondii, fluviatile, hyemale, limosum, palästre, pratense, scirpoides, sylvaticum, unnbrosum, variegatum*.

EQUITANT, a mode of arrangement of leaves with respect to each other, in which the sides or edges alternately overlap each other.

ERAGRÖSTIS, *Beauvois*. From *eros*, love, and *agrostis*, grass; in allusion to the beautiful dancing spikelets; whence the English name, Love Grass. *Linn.* 3, Or. 2, Nat. Or. *Graminaceæ*. Pretty species of grass, growing about a foot high, in any common soil. *Synonymes*: 1, *Poa cynosuroides*; 2, *P. meicicana*; 3, *P. Eragröstis*.

ERICA, Linn. The *Erica* of Pliny, which is derived from *erico* or *creico*, to break; because some of the species are supposed to have the quality of breaking stone in the bladder. Linn. 8, Or. 1, Nat. Or. *Ericaceæ*. This is a genus comprising a great number of very beautiful and interesting plants, but not so much cultivated as they ought to be, on account of the supposed difficulty in managing and propagating them; but the greatest difficulty lies in getting proper soil for them, without which they will not thrive. The free-growing kinds thrive best in good black peat, and like largish pots to grow in. The dwarf and hard-wooded kinds must have a very sandy peat, and smaller pots, well drained with potsherds, over which a few bits of rough turfy peat should be placed; they also require less water than the free-growing kinds, as they grow chiefly at the Cape on the tops and sides of mountains, and in the crevices of rocks, and such like situations, chiefly in very sandy soil, and but little of it; they all require a good deal of air, and must not be crowded too thick together. Too much fire heat in winter will hurt them as much as anything, as they only require to be kept from frost; most of the kinds might be preserved through the winter in frames: the only difficulty is to keep the damp from them. Cuttings of most species strike readily, by taking off the very tender tops of the shoots, and planting them in sand, under glasses. The strong growing kinds require the cuttings to be rather larger than the others, and some of the stunted growing kinds should be kept in the stove a little while when they begin to grow, to draw them to a sufficient length of young wood, or cuttings cannot be procured; as soon as rooted they should be potted off singly into small pots, and placed in a close frame, and hardened by degrees. The hardy sorts require to be grown in the same kind of soil; cuttings planted in sand, under a glass, will root freely: they may also be increased by layers. *Synonyms*: 1, *Erica cylindrica*; 2, *E. amœna*; 3, *E. florida*; 4, *E. aristata minor*; 5, *E. Linnaeana superba*; 6, *E. pulchella*; 7, *E. quadriflora*; 8, *E. cuniculata minor*; 9, *E. calycina*; 10, *E. eriocephala*; 11, *E. inaperta*; 12, *E. sessiliflora*; 13, *E. calycina*; 14, *E. mirabilis*; 15, *E. rupestris*; 16, *E. transpærens*; 17, *E. articulæris*; 18, *E. peltata*; 19, *E. octophylla, coronata*; 20, *E. ERICÄLA, Ren. See *Gentiana*.
 ERICOILA, Bork. See *Gentiana*.
 ERIGERON, Linn. From *er*, spring, and *geron*, an old man; the plants become old in the beginning of the season. Linn. 19, Or. 2, Nat. Or. *Asteröccc*. This genus comprehends many exceedingly handsome species, varying from a few inches to two feet or more high, and producing a great and copious display of blossom; they will grow in almost any soil, and are increased with facility from either seeds or divisions. In the United States, *E. heterophyllum* and *E. philadelphicus*, are used as diuretics. Synonymes: 1, *E. Serpentarius*; 2, *Conjya chilensis*; 3, *Aster bonariensis*; 4, *A. ännuus*; 5, *Conjya ambigua*; 6, *C. atatica*;

7, *Conyza alticola*, *E. ciliatus*; 8, *Aster pulchellus*; 9, *Stenactis speciosa*. See *Inula* and *Stenactis*.

ERINUS. See *Campánula Erinus* and *Lobelia Erinus*.

ERIOBOTRYA, *Lindley*. From *erion*, wool, and *botrys*, a bunch of grapes; the raceme is very woolly. *Linn.* 12, Or. 2, Nat. Or. *Pomaceæ*. *E. japonica* is the loquat tree of Japan, and is deserving of the most extensive culture, both as a plant of ornament and utility. The flowers are produced in terminal bunches in January, and the fruit ripens, and is fit for table, in April. Plants may be obtained from cuttings, seeds, or grafting. By cuttings—take off the young ripe wood in June, each cutting about two inches long, always cut off at a joint; plant them in a pot of sand, under a glass, plunged up to the rim of the pot in a brisk heat, and they will soon root. By seeds—as soon as they are gathered, they must be sown in a pot of fine-sifted leaf-mould, and the pot plunged in a brisk heat; the soil should be covered with moss, to prevent the surface drying, and in about a fortnight young plants will make their appearance. When about an inch high, they should be planted singly into thimble pots, in a mixture of leaf and heath-mould broken very fine; plunge the pots again in a hotbed till they require another potting, after which, treat them as old plants. By grafting—the best stock for grafting on is the Whitethorn, and for plants grown in the stove, the end of October is the proper time, but if growing out of doors, grafting may be performed at the usual grafting season. *Synonymes*: 1, *Méspilus culta*; 2, *M. japonica*. See *Cotoneaster*.

monte-vidensis, ciliatus, 6.

ERINEUM, *Fries*. From *erinos*, a hedgehog; because of its erinaceous appearance. *Linn.* 24, Or. 9, Nat. Or. *Mucoraceæ*. Very minute species, mostly brown or whitish; they are found growing in little tufts, on various kinds of leaves—*acerinum*, *alveum*, *adveum*, *betulinum*, *clandestinum*, *fagineum*, *griseum*, *Juglandis*, *landsum*, *Padi*, *populinum*, *Pseudopeltati*, *purpurascens*, *pyrinum*, *roseum*, *Sorbi*, *tiliacum*, *tortuosum*, *Vitis*.

ERINOSMA. See *Leucodjum*.

ERINUS, prickly, rough.

ERINUS, *Linn.* Meaning unknown. *Erinos* is the wild fig-tree. *Linn.* 14, Or. 2, Nat. Or. *Scrophulariaceæ*. These are pretty dwarf species, and should be in every collection of Alpines. If the soil is sandy, they will succeed well, and young plants are easily obtained from seeds, or divisions. See *Nycteria*.

- ERIOPHYLLUM**, *Lagasca.* From *erion*, wool, and *phyllon*, a leaf; in allusion to the silky, wool-like substance covering the leaves. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. The species are pretty, and will thrive in any common soil, and young plants grow well from divisions of the roots. *Synonymes*: 1, *Trichophyllum lanatum*, *Actinella lanata*; 2, *Trichophyllum oppositifolium*.
- caespitosum 1 . . . Yellow 5, H. Ev. Tr. 1 N. Amer. 1826
 oppositifolium 2 Yellow 5, H. Her. P. $\frac{1}{4}$ Missouri
- ERIOPHYLLUM**. See *Bahia*.
- ERIOPSIS**, *Lindley.* From *Eria*, a well-known genus, and *opsis*, resemblance; woolliness of flowers. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. This small genus belongs to the Maxillarids, among Vandeuse, Orchids; but has so much the habit of an *Eria* when not in flower, that it may be easily mistaken for one. The leaves are large and plaited, placed two or three together, upon the summit of a fleshy oblong stem, and it throws from the base a long spike of gay orange-coloured blossoms. For culture, see *Eria*.

EROPHILA, De Candolle. From *er*, the spring, and *phileo*, to love; alluding to the time of flowering. *Linn.* 15, Nat. Or. *Brassicæcæ*. Minute plants, one of which, *E. vulgaris*, is a native of Britain, and better known by the name of *Draba verna*; it is very pretty in spring when seen growing upon old walls, and other like places, where it is generally abundant. Any soil seems to suit these plants; but if it consists chiefly of loam, so much the better they will grow; seed is produced in abundance. *Synonymes*: 1, *Draba præcox*; 2, *D. verna*.

ERYNGIUM, *Tournefort*. From *ereugo*, to belch; according to Dioscorides, this plant is a specific against all complaints arising from flatulence. *Linn.* 5, Or. 2, Nat. Or. *Apiaceae*. Most of the species of this extensive genus are extremely ornamental and beautiful, more especially the hardier kinds, which are, on that account, particularly well adapted for the flower-border. They thrive best in a light sandy soil, though they will all grow in any common garden soil. The greenhouse and frame kinds should be grown in pots, so that they may be sheltered in winter. They are readily increased by seeds, or dividing at the roots. The roots of *E. campéstre* are slightly aromatic.

ERYTHRINA, Linn. From *erythros*, red; in reference to the colour of the flowers. *Linn.* 17, Or. 4, Nat. Or. *Fabaceæ*. These are all splendid plants, with fine large leaves, and beautiful brilliant, scarlet, or red flowers; the compost best suited for them is one part fresh maiden loam, one part sandy peat, and one part of horse-dung, well rotted and pulverised. The whole should be well incorporated and chopped, and also well exposed during frost in winter. As soon as the plants have done growing, cut them down, and set them in a cool greenhouse, where they may be kept

quite dry till the end of November, when they may be potted into fresh soil, and pots of a proper size. When potted, water, and set them in a house where the heat is about sixty degrees, and about March they will flower in perfection. When the plants are again out of flower, cut them down, as before, to five or six eyes, according to the strength of the stems; re-pot them, and place them in the stove until they have taken root, and made shoots from nine to twelve inches, when they must be removed to a house of the temperature of from fifty-five to sixty degrees, allowing them plenty of light; they must be frequently syringed, to prevent the attacks of the red spider. Continue this treatment till they show flower, then allow them plenty of air and moisture, and they will flower freely again in July, after which, it is advisable to give them their winter. Cuttings taken off at a joint, without depriving them of their leaves, root readily in sand, under a hand-glass, in a moist heat. *E. Cristagalli*, and *E. laurifolia*, will thrive and flower freely in warm sheltered situations out of doors; in such situations, they are killed to the stump in winter unless they are cut down to about four inches of the stem, and sheltered by an inverted flower-pot. *Synonymes*: 1, *E. velutina*; 2, *E. arborea*. See also *Euphorbia Erythrina* and *Psidium Erythrina*.

ERYTHROCHITON, Nees and Martius. From *erythros*, red, and *chiton*, a coat. *Linn.* 5, Or. 1, Nat. Or. *Rutaceæ*. A small tree attaining about ten feet in height; it has the habit of *Theophrasti*, being without branches, and hav-

ing all the leaves collected at the summit. The flowers are white with red calyxes; it is one of those fragrant tropical trees whose foliage is filled with a sweet volatile oil, like that of the orange, and whose aromatic, tonic bark is valuable as a remedy for the fevers of such countries. The genus is indeed very near *Galipèa*, one of whose species furnishes the *Angostura* bark of Medicine.

Braziliensis . White 7, S. Ev. T. 10 Brazil . . 1842

ERYTHROLÆNA, *Sweet*. From *erythros*, red, and *chlœna*, a cloak; alluding to the scales of the calyx. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*.

A very pretty Mexican species, producing its scarlet and orange flowers in abundance; it delights in a rich soil, and young plants are readily obtained from seed.

conspicua . . Scar. oran. 9, H. B. 4 Mexico 1825

ERYTHRONIUM, *Linn.* From *erythros*, red; in allusion to the colour of the leaves and flowers. *Linn.* 6, Or. 1, Nat. Or. *Liliaceæ*. These are handsome, though dwarf-garden plants. They all thrive in common garden soil, except *E. lanceolatum*, which requires a peat soil, or it will not succeed; they are increased from off-sets. *Synonyme*: 1, *E. americanum*.

ERYTHROPLÆUM, *Azel.* From *erythros*, red; in reference to the red juice which flows from the tree when cut. *Linn.* 10, Or. 1, Nat. Or. *Fabacææ*. This is a lofty and an ornamental tree, growing about a hundred feet high. The natives of many parts of Western Africa use the red juice of the tree as an ordeal, to detect the guilt of those accused of any crime. The juice is taken in large draughts, and those who are not sufficiently strong to stand this ordeal, are pronounced guilty, and those who are, are considered innocent; whence the tree is called *Grege-tree*, or *Ordeal-tree*. *Synonyme*: 1, *Azéliâ grandis*.

guineense . Pa. yel. 6, S. Ev. T. 100 S. Leone . 1793

ERYTHROPOGON, *De Candolle*. From *erythros*, red, and *pogon*, a beard; paleæ of flowers. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. *Synonymes*: 1, *Metalâsia uniflora*; 2, *M. umbellata*.

imbricatus . White 5, G. Ev. S. 2 C. G. H. . . 1816
umbellatus . Rose . 5, G. Ev. S. C. G. H. . . 1816

ERYTHROXYLACÆE or **ERYTHROXYLS**. A small order of trees and shrubs, nearly related to *Malpighiads*. They are chiefly natives of South America and the West Indies.

ERYTHRÓXYLON, *Linn.* From *erythros*, red, and *xylon*, wood; the wood of the trees is red. *Linn.* 10, Or. 3, Nat. Or. *Erythroxylicææ*. These trees are not possessed of much beauty, but in their native countries they are valuable for their domestic and medicinal uses. "E.

Côca is a plant much used by the miners of Peru for its stimulating properties, which in many respects resemble opium, and no effects that have been ascribed to the immoderate use of opium are exceeded by what seems the consequence of chewing the *Coca* leaf." They require to be grown in a mixture of peat and loam, and cuttings, not too ripe, will root in sand, under a glass, in a moist heat. See *Séthia*, also *Melhania Erythroxyylon*.

ESCALLONIA, *Mutis*. In honour of Escallon, a Spanish traveller in South America, who first found the species in New Grenada. *Linn.* 5, Or. 1, Nat. Or. *Escalloniaceæ*. All the species of this genus are very fine, evergreen, greenhouse shrubs, several of which are sufficiently hardy to stand our winters when planted against a south wall, with the protection of a mat in severe weather. They grow best in a mixture of peat, sand, and loam; cuttings taken off as soon as the wood is ripened, will root readily if planted in sand, under a glass. *Synonyme*: 1, *E. divida*.

ESCALLONIACÆE or **ESCALLONIADS**. A small order of shrubs, found growing in the temperate parts of the world at considerable elevations. All are evergreen, and emit a powerful odour.

ESCHAROTIC, having the power to scar or burn the skin.

ESCHSCHOLTZIA. See *Chryseis*.

ESCULENT, good for food.

ESCULUS. See *Quercus Esculus* and *Dutea*.

ESPALETIA, *Mut.* In honour of Don Jose Espaléta, Viceroy of New Grenada. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. Perennial species, growing freely in the open border in summer, but requiring the shelter of a frame in winter; increase is by division of the roots.

argentea . Yellow 6, F. Her. P. N. Grenada 1845
grandiflora Yellow 6, F. Her. P. N. Grenada 1845

ESPRIT D'IVA. An aromatic liquor made from *Piârnica moschata*.

ÉSULA. See *Euphòbia*.

ETHER CENANTHIC is found in the rind of the Quince.

ETHÛLIA, *Cassini*. Meaning unknown. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. Stove annuals, not worth cultivating, except in botanical collections. *Synonyme*: 1, *E. sinapifolia*—*brasilensis*, *conyzoides*, *divaricata*, *integrifolia* 1.

EUCALÝPTUS, *L'Heritier*. From *eu*, well, and *kalypto*, to cover; the limb of the calyx covers

the flower before expansion, and afterwards falls off in the shape of a lid, or cover. *Linn.* 12, Or. 1, Nat. Or. *Myrtaceæ*. All the species of this genus are very tall and handsome, and as they grow fast, are well adapted for conservatories. *E. perfoliata* will endure the open air against a south wall, in which situation it looks very handsome, on account of its hoary, bluish foliage, and neat growth of the branches. They delight to grow in a mixture of peat, loam, and sand; and cuttings, not too ripe, root readily in sand, under a glass. A kind of gum, called *kino*, is got from *E. resinifera*, and sold in the medicine bazaars of India; and various other species yield a large quantity of tannin, which is extracted from the trees in New Holland, and sent to the English market, and is said to be twice as powerful in its operations as oak-bark. *Synonymes*: 1, *E. cordata*; 2, *Metrosideros salicifolia*.

EUCHÆTIS, Bartling. From *eu*, well, and *chaite*, a head of hair; petals bearded inside. *Linn.* 5, Or. 1, Nat. Or. *Rutaceæ*. See *Diósma* for culture, &c.

glomerata . . .	White . 5, G. Ev. S. C. G. H.	. 1818
-----------------	-------------------------------	--------

EUCARIDIUM, Fischer and Meyer. From *eucharis*, agreeable; in allusion to the appearance of the plant. *Linn.* 8, Or. 1, Nat. Or. *Onagrææ*. Pretty little plants, nearly allied to *Clarkia*; they flower in about six weeks from the time of germination, and are perfectly hardy.

concinnum . . .	Purple . 6, H. A. 1 N. Amer.	. 1836
grandiflorum . . .	Rosy red 6, H. A. 1 N. Gren.	. 1836
album . . .	White . 6, H. A. 1 Gardens.	. 1856

EUCHILUS, R. Brown. From *eu*, well, or good, and *cheilos*, a lip; the upper lip of the calyx is very large. *Linn.* 10, Or. 1, Nat. Or. *Fabaceæ*. A very pretty plant when in flower. For culture and propagation, see *Pultenea*.

obcordatus . . .	Yellow 4, G. Ev. S. 2 N. Hol.	. 1803
------------------	-------------------------------	--------

EUCHROMA, Nuttall. From *eu*, well, or good, and *chroma*, a colour; alluding to the colour of the bracteas. *Linn.* 14, Or. 2, Nat. Or. *Scrophulariææ*. Dwarf ornamental plants, of easy culture. *Synonymes*: 1, *Bartsia coccinea*, *Castilleja coccinea*; 2, *Castilleja sessiliflora*, *grandiflora*.

coccinea 1 . . .	Yellow . 7, H. A. 1 N. Amer.	. 1787
grandiflora 2 . . .	Pur. yel. 7, H. Her. P. 1 Louisiana	. 1811

EUCHROMA. See *Castilleja*.

EUCLEA, Linn. Derived from *eukleia*, glory; alluding to the beautiful evergreen foliage. *Linn.* 22, Or. 10, Nat. Or. *Ebenææ*. These are very ornamental shrubs, succeeding in peat and loam mixed, and multiplied from cuttings.

racemosa . . .	White . 11, G. Ev. S. 5 C. G. H.	. 1772
undulata . . .	White . 10, G. Ev. S. 5 C. G. H.	. 1794

EUCLIDIUM, R. Brown. From *eu*, well, and *kleidos*, to shut up; on account of the well-closed seed-pods. *Linn.* 15, Nat. Or. *Brassicææ*. Plants which are only worth growing in general collections. *Synonymes*: 1, *Bunias syriaca*; 2, *Vella tenuissima*.

syriacum 1 . . .	White . 7, H. A. 1 Levant	. 1778
tataricum 2 . . .	White . 7, H. A. 1 Tartary	. 1821

EUCNIDA, Zucc. See *Microsperma*.

EUCOMIS, Linn. From *eukomes*, beautiful-haired; alluding to the tufted crown of the flower-spike. *Linn.* 6, Or. 1, Nat. Or. *Liliæææ*. Ornamental plants, succeeding in any rich soil, and increased from offsets.

bifolia . . .	Lt. gn. 4, G. Her. P. 1 C. G. H.	. 1792

- EUNOMIA, De Candolle.** From *eu*, good, and *nomos*, order; because the leaves are opposite, and the seeds twin. *Linn.* 15, Nat. Or. *Brassicææ*. This is a pretty little plant, growing freely in sand, loam, and peat, and increased by cuttings in the same kind of soil, under a glass, or by seed. *Synonyme*: 1, *Lepidium oppositifolium*.
 oppositifolia 1 . . . White 6, F. Her. P. 1 Syria . 1827
- EUNYMUS, Linn.** From *eu*, well, and *onoma*, a name, well named. *Linn.* 5, Or. 1, Nat. Or. *Celastrææ*. This is a genus of good sized ornamental shrubs, well suited for large shrubberies. *E. atropurpureus*, and *E. latifolius*, are the most showy; any situation or soil will suit them. They increase by seed, or cuttings of the ripened wood, planted in autumn, will take root. *Synonyme*: 1, *E. scandens*.

- EUPATÓRIA.** See *Agrimonia Eupatória* and *Stevia Eupatória*.
EUPATÓRIUM. Linnæus derived the name from *Mithridates Eupator*, who used it as a counter-

poison. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. Some species of this genus are very ornamental, as *E. floribandum*, while others, as *E. coriaccum*, are quite uninteresting. They require a mixture of peat and loam to grow in, and young plants are obtained from seeds without difficulty. *E. Ayapana* has been famed for curing the bite of serpents, and an infusion of its leaves forms excellent diet-drink, and, when fresh bruised, are said to be very useful for cleaning the face of a foul ulcer. *E. perfoliatum* is tonic, stomachic, and febrifugal. *Synonymes*: 1, *E. nepalense*; 2, *E. atriplicifolium*; 3, *E. mólle*, *Ageratum guianense*; 4, *E. coriátum*; 5, *Eriopappus paniculatus*; 6, *E. Dalea*; 7, *E. atriplicifolium*. See *Caesalpinia*, *Ozothamnus*, and *Achillea*.

EUPHORBIA. Linnæus named this genus after Euphorbus, a physician to Juba, King of Mauritania. *Linn.* 11, Or. 3, Nat. Or. *Euphorbiaceæ*. This is an exceedingly variable, and very extensive genus of plants, comprising a number of very handsome species, as well as a number that are entirely unworthy of cultivation. Many of the stove and greenhouse species are of a succulent nature, therefore require to be grown in a dry soil, consisting of loam, and old brick and lime rubbish; they require but little water; those that are not of a succulent nature require a light rich soil, and plenty of moisture. They all abound in a milky juice. Sweet says, "The way we have succeeded best in striking the cuttings, is to stick them in the tan among the pots, in a good heat, and not cover them with any glass; but the best way of getting good plants is from seed, which will ripen plentifully if care be taken to fertilize the stigmas with the pollen when in bloom." The hardy perennial species thrive in any common garden soil, and increase by divisions of the roots, or by seeds. The hardy annuals and biennials merely require sowing in the open ground. The tender kinds must be sown in the hothouse, or in a hotbed frame, and when potted off, must be set with other tender annuals and biennials. The root of *E. Ipecacuanha* is said to be equal to the true *Ipecacuanha*. *E. antiquorum*, *canariensis*, and some other fleshy species, produce the drug *Euphorbium*, which is the inspissated milky juice of such plants. The native practitioners of India prescribe internally the juice of the leaves of *neriefolia* as a purge and obdurator. The Tamool doctors of India give the leaves and seeds of *E. thymifolia* in worm cases. In India, the fresh acrid juice of *E. Tirucalli* is used as a vesicatory. The juice of *E. heptagona*, according to Virey, furnishes the Ethiopians with a deadly poison for their arrows. *Synonymes*: 1, *E. eupleuroides*; 2, *Medusa major*; 3, *Treisia tuberculata*; 4, *Dactylanthus globosa*; 5, *Treisia clava*; 6, *T. hystrix*; 7, *E. virgata*; 8, *Dactylanthus patula*; 9, *Tithymalus pendulus*; 10, *E. minima*; 11, *E. rigida*; 12, *E. jacquiniflora*; 13, *Tithymalus geniculatus*; 14, *Tithymalus repandus*; 15, *Craton clubioides*; 16, *Tithymalus unistlorus*; 17, *E. jacquiniflora*. See *Pedilanthus*.

EUPHORBIAEAE, or SPURGE-WORTS. A large order of trees, shrubs, and herbaceous plants, often abounding in acrid milk. A very large number are poisonous, the noxious principle residing in the milky secretion. Many, however, are most important for their medicinal properties, others contain so much starch as to be useful for food, some furnish dyes, and the wood of others, as the Box, &c., is so close-grained that it is extensively used by engravers.

EUPHORIA, *Jussieu*. From *euphorus*, fertile; alluding to the fruit. *Linn.* 8, Or. 1, Nat. Or. *Sapindaceae*. A genus of fruit-bearing trees, attaining from fifteen to twenty feet high, and thriving in any rich mould; they may be increased either by layers or seed. *Synonymes*: 1, *Dimocarpus Litchi*; 2, *D. Longan*; 3, *Nephelium lappaceum*, *Scytalia Rambootan*.

EURYALE, *Salisbury*. From *Euryale*, one of the Gorgons; alluding to the thorny menacing habit of the plant. *Linn.* 13, Or. 1, Nat. Or. *Nymphaeaceae*. This is a very handsome plant, on account of its fine large leaves, which float on the surface of the water, in which it requires to be constantly grown. The only way of propagating it is by seed, which is readily obtained by shaking the pollen on the stigma when the

flowers are well expanded. *Synonyme*: 1, *Anneslea spinosa*. See *Victoria*.

ferox . . . Red . 8, S. Aq. P. floa. India . . . 1809

EURYBIA, *Cassini*. From *euries*, wide-spreading; alluding to its creeping offsets. *Linn.* 19, Or. 2, Nat. Or. *Asteraceae*. Rather a pretty genus, each corymb usually consisting of numerous heads of flowers. For culture and propagation, see *Aster*. *Synonymes*: 1, *Aster aculeatus*; 2, *Aster corymbosus*, *A. cordifolius*; 3, *Aster tomentosus*; 4, *A. lyratus*; 5, *A. argophyllus*. See *Olearia*.

EUSTREPHUS, *R. Brown*. From *eu*, well, and *strephe*, to twine; twining habit of the plants. *Linn.* 6, Or. 1, Nat. Or. *Liliaceæ*. These are very pretty evergreen twiners, and if carefully managed, they will succeed in sandy peat. Young plants are obtained from cuttings without any difficulty.

angustifolius Pa. pur. 7, G. Ev. Tw. 3 N. S. W. 1820
silenifolius . Pa. pur. 6, G. Ev. Tw. 3 N. S. W. 1800

EUTAXIA, *R. Brown*. From *eutaxia*, modesty; in allusion to the delicate appearance of the plants when in flower. *Linn.* 10, Or. 1, Nat. Or. *Fabaceæ*. The plants of this genus are very pretty, and thrive best in a mixture of loam and peat. To have handsome bushy plants, the tops should be frequently plucked off, and in potting, plenty of drainage should be given. Cuttings root readily planted in sand, under a glass. *Synonyme*: 1, *Dillwynia pungenis*.

Baxteri . . Yellow 6, G. Ev. S. 4 N. Holland 1830
myrtifolia . Orange 3, G. Ev. S. 1½ N. Holland 1803

EUTERPE, *Gœrtner*. From *euterpe*, pleasing; alluding to the habit of the species. *Linn.* 21, Or. 6, Nat. Or. *Palmaceæ*. This is a fine genus of palms; some of the species grow upwards of forty feet high. To grow them well, they require a sandy loamy soil, and plenty of heat; they are increased from seed. *E. oleracea* is the highest of American palms. The sheaths of the leaves are very close, and form the green top of the trunk, a foot and a half in length. The inhabitants cut off this top, take out the white heart, of two or three inches in diameter, consisting of the leaves closely folded together, and eat it either raw, with pepper and salt, or fried with butter, like the artichoke. *Synonymes*: 1, *A. spicata*; 2, *Arëca oleracea*; 3, *E. globosa*. See *Arëca*.

EXCENTRICAL, out of the centre.

EXCIPULA, *Fries.* From *excipio*, to catch; alluding to the roughness of the plant to the touch. *Linn.* 24, Or. 9, Nat. Or. *Uredinacæ*. Minute species of black *Fungi*, found in autumn upon dead raspberry stems—*Rubi, strigosa*.

EXCISA, bluntly cut off.

EXCORIATE, stripped of the skin.

EXCURRENT, projecting beyond the edge or point of anything.

EXETER ELM. See *Ulmus montana*.

EXETER OAK. See *Quercus Cærris*.

EXIDIA, *Fries.* From *exidio*, to exude; alluding to the sporules exuding from the receptacle. *Linn.* 24, Or. 9, Nat. Or. *Aguricacæ*. Brownish species, found in autumn and winter on various species of trees—*auricula-Judæ, flaccida, glandulosa, recisa, rubescenti-fusca*.

EXILARIA, *Greville.* From *exilis*, slender; habit of the plants. *Linn.* 24, Or. 7, Nat. Or. *Diatomacæ*. Greenish, very minute species, found in summer in the sea, and various watery places—*circularis, fasciculata, flabellata, fulgens*.

EXIGUUS, mean, small.

EXOCARPUS, *Labillardière.* From *exo*, outside, and *carpos*, fruit; the seed is situated on a large fleshy receptacle. *Linn.* 21, Or. 5, Nat. Or. *Thymelacæ*. These are large-growing plants, especially *E. cupressiformis*, which is described as a timber tree. They require a mixture of peat and loam to grow in, and cuttings root freely in sand, under a glass.

cupressiformis . Apetal 4, G. Ev. T. 35 V. D. L. 1824

humifusus . . Apetal 5, G. Ev. Tr. 1½ V. D. L. 1824

strictus . . . Apetal 4, G. Ev. S. 5 N. Holl. 1822

EXOGENOUS, growing by addition to the outer parts of the stem.

EXOGENIUM, *Choisy.* From *exo*, external; exerted stamens. *Linn.* 5, Or. 1, Nat. Or. *Convólulacæ*. The *Synonymes* of the species of this genus sufficiently indicate its mode of culture. *Synonymes*: 1, *Convólulus Jalapa*, *Ipomæa Jalapa*, *Ipomæa Purga*, *Ipomæa Schiediana*; 2, *Ipomæa filiformis*; 3, *Ipomæa repanda*.

filiforme 2 . Purple 10, S. Ev. Tw. 10 W. Indies 1823

Purga 1 . . . Ro. pur. 9, S. Ev. Tw. 10 Vera Cruz 1838

repandum 3 . Scarlet 6, S. Ev. Tw. 10 W. Indies 1793

EXOSMUS. See *Laurus albidus*.

EXOSPORIUM, *Link.* From *exo*, outside, and *spora*, a spore. *Linn.* 24, Or. 9, Nat. Or. *Botrytacæ*. A very minute plant, found growing at any season on the lime-tree branches—*Tilia*.

EXOSTEMMA, *De Candolle.* From *exo*, without, and *stemma*, a crown; alluding to the exerted stamens. *Linn.* 5, Or. 1, Nat. Or. *Cinchonacæ*. Trees, attaining from twenty to thirty feet high. *E. floribandum* is described as a timber tree. They all require to be grown in loam and peat, and are increased from cuttings in sand, under a glass, in heat. *Synonyme*: 1, *Cinchona longiflora*.

EXPECTORANT, anything that promotes the discharge of mucus from the chest.

EXSCÁPUS, without a stalk.

EXSERTED, projecting much beyond something else.

EXSCCATED, dried up.

EXSÚCCUS, dry, sapless.

EXURGENT, growing upwards.

EXTRA-AXILLARY, growing from above or below the axils of the leaves or branches.

EXTRA-FOLIACEOUS, away from the leaves, or inserted in a different place from them.

ΕΚΨΥΙΑ, whatever is cast off from plants.

EYEBRIGHT. See *Euphrasia*.

EYSENHÄRDIA, *Kunth*. In honour of Charles William Eysenhardt, M.D., a professor in the University of Königsberg, in Prussia. *Linn.* 17, Or. 4, Nat. Or. *Fabaceæ*. This shrub will

thrive in a mixture of loam and peat, and young cuttings will strike root in sand, under a bell-glass, in heat.

amorphoides. Pa. yel. 6, S. Ev. S. Mexico. . 1837

EZOBO, or **HYSSOP** of our gardens, is the *Hysosopus officinalis*, but the Hyssop, or Ezob, of the Jews, appears to be the Egyptian caper plant (*Cápparis aegyptiaca*).

F.

FÀBA, *De Candolle*. From *phago*, to eat; the esculent seeds of the common bean are well known. *Linn.* 14, Or. 4, Nat. Or. *Fabaceæ*. This species, and its garden varieties, are well known, on account of their seeds being so much used in cookery. They only require to be sown in the open ground. *Synonyme*: 1, *Vicia Fàba*.

vulgàris 1 . White . 7, H. A. 3 Egypt.
equina . Purple . 7, H. A. 3

FABÀCÆ, or leguminous plants. A most extensive order, consisting of annuals, herbaceous plants, shrubs, and immense trees. It has been long known by the name of *Leguminosæ*, on account of the fruit being produced in pods. This is one of the most important orders in the vegetable world, supplying food, medicine, timber, dyes, scents, cordage, canvas, and many other products far too numerous to mention.

FABÀGO, *Tournefort*. From *faba*, a bean; resemblance of the leaves. *Linn.* 10, Or. 1, Nat. Or. *Zygophyllacæ*, bean caper. This species thrives well in a light soil and a dry situation; it is increased from seed. *Synonyme*: 1, *Zygophyllum fabago*.

màjor 1 . . Wht. saf. 7, H. Her. P. 4 Syria. . 1596

FABIÀNA, *Ruiz* and *Pavon*. In honour of Francisco Fabiano, of Valencia, in Spain, a promoter of botany. *Linn.* 5, Or. 1, Nat. Or. *Solanacæ*. The soil adapted to, this pretty little shrub is peat and sand, and it may be multiplied by cuttings or seed, in the same manner as Cape-heaths.

imbricatà . . White . 6, G. Ev. S. 1 Chili . . 1840

FABRÍCIA, *Gartner*. In honour of J. C. Fabricius, the celebrated Danish entomologist. *Linn.* 12, Or. 1, Nat. Or. *Myrtacæ*. Ornamental plants, well adapted for conservatories, as they require to grow to a good size before they will flower. For culture and propagation, see *Leptospermum*.

FÀGUS. From *phago*, to eat; in early ages the nuts of the beech tree were used as food. *Linn.* 21, Or. 9, Nat. Or. *Corylacæ*. Hand-

some and very ornamental timber trees, particularly *F. sylvatica*, which is one of the handsomest and best adapted of trees for planting singly in parks or lawns. The beech tree thrives best in a chalky clay or loamy soil, preferring a sheltered situation. They may all be increased by seed, budding, or grafting. The timber is brittle, but much used by turners, joiners, and millwrights. *Synonymes*: 1, *Bétula antarctica*; 2, *F. sylvatica asplenifolia*, *s. incisa*, *s. laciniata*, *s. salicifolia*. See *Castanea*.

FALSE BILBERRY. See *Gaylussàcia Pseudo-Vaccinium*.

FALSE CORK-TREE. See *Quercus Pseudo-Sàber*.

FALSE DITTANY. See *Dictamnus Fraxinèlla*.

FALSE SENNA. See *Colutea*.

FALSELY TWO-VALVED; imperfectly two-valved, or having two valves with an origin different from that of ordinary valves.

FAN-NERVED, the nerves disposed like a fan.

FAN PALM. See *Coriþha* and *Chamærops*.

FÀQUAHIA. See *Pandanus*.

FARÀMEA, *Aublet*. Meaning of the name not given. *Linn.* 3, Or. 1, Nat. Or. *Cinchonacæ*. This shrub is well deserving of culture on ac-

count of its sweet-scented flowers, which are about the size of those of the jasmine. It succeeds well in a mixture of turfy loam, peat, and sand, and may be increased by ripened cuttings planted in sand, under a glass, in a moist heat. The plants require plenty of pot room, and a liberal supply of water. *Synonymes*: 1, *Tetramèrium odoratissimum*, *Coffea occidentalis*, *Ixora americana*.

odoratissima . White . 5, S. Ev. S. 6 W. Indies . 1793

FARCTUS, filled full of anything, as an orange with pulp.

FÀRFARA. See *Tussilàgo Fàrfara*.

FÀRIAM, in rows; as bifariam, trifariam, &c.

FÀRINA, meal.

FÀRINACEOUS, full of flour.

FÀRINACEOUSLY TOMENTOSE, } covered with a
FÀRINOSELY-TOMENTOSE, } mealy kind of
 down.

FÀRSETIA, *Turra*. In honour of Philip Farseti, a noble Venetian botanist. *Linn.* 15, Nat. Or.

Brassicacæ. The frame species of this interesting genus thrive well in any light soil, and cuttings strike readily in the same kind of soil, under a glass. The perennial kinds are well suited for rock-work, or for the front of flower-borders; they may be increased from cuttings planted under a glass, or from seed. The annual species merely require sowing where intended to flower. *Synonymes*: 1, *Algisum cheiranthifolium*; 2, *F. aegyptiaca*, *Cheiranthus Farsètia*; 3, *Algisum clypeatum*; 4, *Lunaria græca*. See *Aubriètia* and *Berteroa*.

FERNELLA, *Commerson*. After J. Fernel, physician to Henry II. of France, who died in 1558. *Linn.* 4, Or. 1, Nat. Or. *Cinchonaceae*. Elegant little plants, with fine glossy leaves, well worthy a place in every collection. They succeed well in a mixture of turfy loam and peat, and cuttings planted in sand, under a glass, will root freely in the stove. *Synonyme*: 1, *Coccothrypsium buxifolium*.

buxifolia 1 . Purple . 5, S. Ev. S. 3 I. France . 1816
obovata . . Purple . 5, S. Ev. S. 3 I. France . 1816

FERNS or **FILICALES** consist of three orders of flowerless plants; some species have trunks forty feet or more high.

FERONIA, *De Candolle*. From *Feronia*, the God-

dess of the forests; in allusion to the situation where this fruit-bearing tree grows. It is a native of the woods of Coromandel. *Linn.* 10, Or. 1, Nat. Or. *Aurantaceae*. A fruit-bearing genus, thriving in a mixture of rich loam and heath mould, and increased by ripened cuttings planted in sand, under a glass, in heat.

elephantum . Blush . 4, S. Ev. T. 40 E. Indies . 1804

FERRARIA, *Linn.* In honour of J. B. Ferrari, an Italian botanist. *Linn.* 16, Or. 1, Nat. Or. *Iridaceae*. Rather ornamental plants when in flower, succeeding best in a mixture of sandy loam and peat; when in a dormant state, they should be kept quite dry. As soon as they begin to grow they should receive a fresh potting, and a regular supply of water. If grown in a warm border, in sandy soil, the bulbs should be planted about six inches deep, and protected from severe weather; they are increased by offsets, or seeds. *Synonyme*: 1, *Ferrariola viridiflora*. See *Tigridia* and *Vieusseuxia*.

FEUILLE. See *Jollisia*.

FEVERFEW. See *Pyrethrum*.

FEVERWORT. See *Triosteum*.

FIBGIA. See *Farsètia*.

FIBRILLÆ, the root-like holdfasts of Lichens and other plants.

FIBRILLARIA. See *Racodium*.

FIBRILLOSE, covered with little strings, or fibres.

FIBROUS, composed of fibres.

FIBRO-VASCULAR, consisting of woody tissue, and spiral and other vessels.

FIBULIFORMIS, button-shaped.

FICARIA, *Dillenius*. Derived from *ficus*, a fig; the roots bear tubercles, resembling little figs. *Linn.* 13, Or. 6, Nat. Or. *Ranunculææ*.

These desirable plants succeed best if planted in any common soil, under the shade of trees. They are increased by separating the tubers in autumn. *Synonyme*: 1, *F. ranunculoides*, *Ranunculus ficaria*.

FICOIDALES. An alliance of succulent plants, consisting of four orders, viz., *Basellææ*, *Mesembryææ*, *Tetragoniææ*, and *Scleranthææ*.

FICOIDÆE. See *Mesembryææ*.

FICUS, *Linn.* The derivation of the name is unknown. *Linn.* 23, Or. 2, Nat. Or. *Moræææ*. This is an extensive but easily cultivated genus of plants, some of which are very desirable, especially *F. elástica*, which is one of the most noted. They all thrive well in any light rich soil, or in loam and peat. Cuttings, with their leaves uninjured, root in sand; the stove species in heat. *F. elástica* is

famed for producing a species of India rubber. The glutinous juice of *F. indica* is applied to the teeth and gums to ease the toothache; the Hindoos consider the bark a powerful tonic, and use it in diabetes. *F. racemosa* is slightly astringent, and the juice of the root is also a powerful tonic. *F. indica* is the celebrated Banyan Tree of India, the seeds of which are supposed to be cooling and alterative. *Synonymes*: 1, *cerasiformis*; 2, *scabra*, *glandulosa*; 3, *nitida*; 4, *venosa*, *leucosticta*; 5, *virens*; 6, *scabra*; 7, *speciosa*, *indica*; 8, *Roeburghii*; 9, *marginalis*; 10, *puberula*; 11, *Saussuriana*, *Brassii*, *Galactodendron speciosum*.

FIDDLE. See *Rumex pulcher*.
FIDDLE-WOOD. See *Urticaceæ*.
FIELD Madder. See *Rubia*.
FIELD RHUBARB. See *Ferraria cathartica* and *purgans*.
FIELDIA, A. Cunningham. In honour of Baron Field, once chief judge of New South Wales. *Linn.* 14, Or. 1, Nat. Or. *Bignoniaceæ*. An ornamental species, which may be successfully grown in a mixture of loam and peat; cuttings will root readily in sand, under a glass, if their leaves are left entire.
australis. White . 7, G. Ev. Cr. 1 N. Holl. . 1826

FIELDIA, Gaud. See *Vanda*.
FIG MARIGOLD. See *Mesembryanthemum*.
FIG TREE. See *Ficus*.
FIGWORT. See *Scrophularia*.
FILAGO, Linn. From *filum*, a thread; the plant appears as if covered with cotton, or down; whence the name Cotton Rose. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. A worthless annual, which merely requires sowing in the open border. *Synonym:* 1, *Evax pygmaea* — *pygmaea* 1. See *Gnaphalium*.
FILAMENTOSE, thready, or cotton-like.
FILÃO. See *Casuarina*.
FILBERT. See *Corylus Avellana*.
FILFIL BUREE, or WILD PEPPER. See *Vitex trifolia*.
FILICALES, an alliance of Acrogens, consisting of the three orders of Ferns.
FILICES. See Ferns.
FILICOLOGY, the study of Ferns.
FILIFORM, like a thread in form.
FILIPENDULA. See *Spiraea Filipendula* and *Potentilla Filipendula*.
FILIX FEMINA. See *Asplenium Filix Femina*.
FILIX MASCULA. See *Aspidium Filix Mas*.
FILMY LEAF. See *Hymenophyllum*.
FILUM, or SEA WHIPLASH. See *Chorda filum*.
FIMBRIARIA, Juss. From *fimbria*, a fringe; leaves much fringed. *Linn.* 10, Or. 4, Nat. Or. *Malpighiaceæ*. A desirable shrub, thriving in a mixture of loam, heath mould, and sand, and increased by ripened cuttings planted in sand, under a glass, in heat.
elegans . . . Yellow 6, S. Ev. Cl. 6 S. Amer. . 1842

FIMBRIARIA. See *Odonthalia*.
FIMBRIATE, fringed round the margin.
FIMBRILLIFEROUS, bearing many little fringes.
FIMBRISTYLIS, Vahl. From *fimbria*, a fringe, and *stylus*, a style; the style is fringed.

Linn. 3, Or. 1, Nat. Or. *Cyperaceæ*. Herbaceous species of grass, requiring to be grown in ponds or ditches, and increased by seeds—*annua, dichotoma, diphylla, puberula*.

FINGER GRASS. See *Digitaria*.
FINGER-PARTED, five lobes resembling the human hand.
FINGERED LEMON, or PHAT-THU. See *Citrus*.
FIORIN. See *Agrostis stolonifera*.
FIR. See *Pinus*.
FIR MOSS. See *Lycopodium*.
FIRE WEED. See *Senecio hieracifolius*.
FIRM, hardish, tending to solidity.
FISCHERIA, G. Don. In honour of F. E. L. Fischer, M.D., Director of the Botanic Garden, St. Petersburg. *Linn.* 5, Or. 2, Nat. Or. *Asclepiadaceæ*. For culture, &c., see *Hoya*.
Martiana . Grn. yel. 5, S. Ev. Cl. 4 S. Amer.
scandens . Grn. yel. 5, S. Ev. Cl. 4 S. Amer. . 1826

FISH POISON. See *Lepidium piscidium*.
FISH WOOD. See *Piscidia erythrina*.
FISSIDES, Hedw. See *Dicranum*.
FISSUS or FIDUS. Divided half way into two or more parts.
FISTULA. See *Cartartocarpus Fistula*.
FISTULAR, { hollow, like a pipe.
FISTULOUS, }
FISTULINA, Bulliard. From *fistula*, a pipe. *Linn.* 24, Or. 9, Nat. Or. *Agaricaceæ*. Crimson little plants, growing in patches about six inches high, and most conspicuous in autumn—*hepatica*.
FITZROYA, Hooker. Named in honour of Capt. Robert Fitzroy, R.N. *Linn.* 21, Or. 8, Nat. Or. *Pinaceæ*. Handsome pinaceous trees with the habit of a drooping Cypress; they grow in any light soil, and may be increased either by cuttings or seeds.
patagonica . Apetal 5, H. Ev. T. 20 Patagonia . 1846

FLABELLATE, fan-shaped.
FLACCID, feeble, weak.
FLACOURTIA. L'Héritier named this genus in honour of Etienne Flacourt, a botanist, and a director of the French East India Company in 1648. *Linn.* 22, Or. 12, Nat. Or. *Placourtiaceæ*. These are ornamental fruit trees, or shrubs, from four to twenty feet high, and very successfully grown in loam and peat; cuttings root freely in sand, under a glass, in heat. *F. Ramontchi* bears leaves and fruit similar to those of the plum. The natives eat the fruit, which are sweet, but leave a slight bitterish taste in the mouth.

sépida . White . 6, S. Ev. S. 10 E. Ind. . 1800
sepiaria . White . 7, S. Ev. S. 6 E. Ind. . 1816

FLACOURTIACEÆ, or BIXADS, an order of shrubs and small trees, chiefly natives of tropical climates; a few species bear eatable fruit, and others are useful in medicine, and for various domestic purposes.
FLAGELLARIA, Linn. From *flagellum*, alluding to the long flexible branches. *Linn.* 6, Or. 3,

- Nat. Or. *Commelynaceæ*. A curious plant, growing about seven feet high in a mixture of peat and loam ; it may be readily increased by suckers. The leaves of this plant are said to be astringent and vulnerary.
India . . . White . 6, S. Ev. Cl. 6 India . . 1782
- FLAGÉLLE**, runners without leaves.
- FLAGELLIFORM**, in form of runners, creeping along the ground.
- FLAKES**, **BIZARRES**, and **PICOTEES**, are terms used by florists to distinguish different kinds of carnations : *bizarres* are such as contain two colours laid on in stripes upon a white ground ; *flakes* have only one colour striped on a white ground ; and *picotees* are smaller, without stripes, and with fringed edges.
- FLAME LILY**. See *Pyrolirion*.
- FLAT**, plane, level.
- FLAT PEA**. See *Platylóbium*.
- FLAVERIA**, *Jussieu*. From *flavus*, yellow ; because in Chili the plants are used for dyeing that colour. *Linn.* 19, Or. 5, Nat. Or. *Asteraceæ*. Annuals and biennials of no value. They require to be sown in heat, and when potted off, treated as other tender plants. *Synonymes* : 1, *Mülleria contrayérba* ; 2, *M. angustifolia* ; 3, *Flavéria lineáris*.
Contrayérba 1 . Yellow 8, S. B. 1½ Peru . 1794
flavescens . . Pa. Yel.
angustifolia 2, *maritima* 3.
- FLAX**. See *Linum*.
- FLAX LILY**. See *Phormium*.
- FLAX STAR**. See *Lysimáchia Linum-stellátum*.
- FLEABANE**. See *Conyza*.
- FLEAWORT**. See *Inula Pulicária*.
- FLEAWORT**. See *Plantágo Psyllium*.
- FLEMINGIA**, *Rowburgh*. In honour of John Fleming, M.D., F.R.S., F.L.S., &c., an acute botanist, and formerly president of the East India Company's medical establishment in Bengal. *Linn.* 17, Or. 4, Nat. Or. *Fabaceæ*. Plants only worth cultivating in collections. They succeed in any light soil, and cuttings will root in sand, under a glass, in heat.
procumbens . Purple . 8, S. Ev. Tr. 1 E. Ind. . 1816
prostrata . . Purple . 8, S. Ev. Tr. 1 E. Ind. . 1816
congésa, lineáta, nána, semialáta, stricta.
- FLEXILE**, easily bent in different directions, pliable.
- FLEXUOUS**, having a bent or undulating direction, zigzag.
- FLINDÉRSIA**, *R. Brown*. In compliment to Captain M. Flinders, R.N., who, accompanied by the famous botanist and naturalist, Robert Brown, explored the coast of New Holland in the beginning of the present century. *Linn.* 10, Or. 1, Nat. Or. *Cedreláceæ*. This is a fine tall-growing tree, the wood of which is employed by the natives for various domestic uses ; indeed, it is said to be very little inferior to mahogany. It succeeds well in loam and peat, and cuttings of the ripened wood, with their leaves not cut, will root in sand, under a glass.
austrális . White . 5, G. Ev. T. 60 N. Holl. . 1823
- FLIX-WEED**. See *Sisymbrium Sophia*.
- FLOCCOSE**, } covered with little tufts, like wool.
FLOCKY, }
- FLOCCOSELY-TOMENTOSE**, down, disposed in little tufts.
- FLORAL**, of or belonging to a flower.
- FLORAL-ENVELOPES**, the calyx and corolla, which envelop the inner parts of the flower, are so called.
- FLORESTINA**, *Cass.* *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. *Synonymes* : 1, *Stévia callósa* ; 2, *S. pedáta*.
callósa 1 . . White . 6, H. A. 1½ Arkansas . 1824
pedáta 2 . . White . 7, G. A. 1½ Mexico . 1803
- FLORETS**, little flowers ; chiefly applied to composite and grasses.
- FLÓS-CÚCULI**. See *Lýchnis Flós-cúculi*.
- FLÓS JÓVIS**. See *Lýchnis Flós Jóvis*.
- FLÓS MÁRTINI**. See *Astréméria Flós-Mártini*.
- FLOSCULOSUS**, composite flowers, consisting of many tubular monopetalous florets.
- FLOWER FENCE**. See *Poinciána*.
- FLOWER OF FOUR HOURS**. See *Mirábilis dichótoma*.
- FLOWER OF JOVE**. See *Lýchnis flós Jóvis*.
- FLOWERS OF HEAVEN**. See *Nóstoc cæruleum*.
- FLOWERING ASH**. See *Ornus*.
- FLOWERING FERN**. See *Osmúnda regális*.
- FLOWERING FLAGS**. See *Iridáceæ*.
- FLOWERING RUSH**. See *Bítomus*.
- FLOWKWORD**, or WATER CUP. See *Hydrocótyle vulgaris*.
- FLÚGGEA**, *Willdenow*. In honour of John Flugge, a German cryptogamic botanist. *Linn.* 22, Or. 6, Nat. Or. *Euphorbiáceæ*. An evergreen shrub of no beauty, and of the simplest culture—*leucopyrus*.
- FLUFPANS**, floating,
- FLUVIALES**. An order of plants now merged in *Juncagináceæ*, *Pistiáceæ*, and *Naiadáceæ*.
- FLY HONEYSUCKLE**. See *Lonicera Xylósteum*.
- FLY ORCHIS**. See *Ophrys muscifera*.
- FŒNICULUM**, *De Candolle*. See *Anéthum litérum*.
- FŒNUGREEK**. See *Trigonélla Fœnum Græcum*.
- FOERSCH** on the Upas tree. See *Antiaris*.
- FOETENS**, stinking.
- FOETIDIA**, *A. Cunningham*. From *foetidus*, fetid ; alluding to the smell of the wood. *Linn.* 12, Or. 3, Nat. Or. *Barringtoniáceæ*. An ornamental tree, about twenty-five feet high ; it requires a turfy loam, mixed with a little peat, and ripened cuttings will soon root if planted in sand, under a glass, in heat.
mauritiána . White . 4, S. Ev. T. 25 Maurit. . 1825
- FOLIACEOUS**, having the texture of leaves.
- FOLIATE** ; when a leaf is divided into leaflets, it is called 1, 2, 3, 5, or 10-foliate, according to the number of leaflets.
- FOLLICLE**, a particular kind of two-valved seed-vessel, such as that of *Pæony*.
- FOLLICULAR**, like a follicle.
- FOLIOSE FERNS**. See *Lycopódium*.
- FOLIOSE MOSSES**. See *Bryáceæ*.
- FONTANÉSIA**, *Labillardière*. In honour of the celebrated Desfontaines, professor of botany at Paris. *Linn.* 2, Or. 1, Nat. Or. *Oleáceæ*. If this very ornamental species is planted out in the open ground, it will require a little protection in severe weather. It thrives well in

- any common soil, and may be easily increased by layers, or cuttings, under a glass.
- phillyræoides*. Yellow 8, F. De. S. 10 Syria . . . 1787
- FONTINALIS**, *Linn.* From *fons*, a fountain; alluding to the place of growth. *Linn.* 24, Or. 5, Nat. Or. *Brydæca*. Greenish-looking plants, most conspicuous in the summer season. *F. antipyrretica* is very common, floating in large masses in rivers and pools of water—*antipyrretica*, *capillacea*, *squamæsa*. See *Cinclidottus*.
- FOOLS' PARSLEY**. See *Æthusa*.
- FOOLS' WATER-CRESS**. See *Helosciadium nodiflorum*
- FOOTSTALKS**, the stalks of leaves, &c.
- FORAMEN**. An aperture.
- FORBIDDEN FRUIT**. See *Citrus Paradisi*.
- FORFICATUS**, pince, or nipper-shaped.
- FORGET-ME-NOT**. See *Myosotis palustris*.
- FORMOSA**, handsome, ornamental.
- FORNICATE**, arched.
- FORRESTIA**, *Rich.* See *Peltia*.
- FORSKÅHLIA**, *Linn.* In honour of Peter Forskahl, a traveller in Egypt. *Linn.* 21, Or. 6, Nat. Or. *Urticæca*. Curious little plants, somewhat resembling the nettle. *F. candida* thrives well in any light rich soil, and cuttings root readily in the same kind of soil, under a glass. The annual kinds require to be sown in a gentle hotbed, and when of sufficient size, transplanted into the open ground.
- angustifolia* Wht. grn. 7, H. A. 2 Teneriffe 1779
candida . . . Wht. grn. 7, G. Her. P. 1½ C. G. H. 1774
tenacissima Wht. grn. 7, H. A. 1½ Egypt . . . 1767
- FORSYTHIA**, *Carul.* Named after Mr. Forsyth, a celebrated gardener and writer on Horticulture. *Linn.* 2, Or. 1, Nat. Or. *Oleæca*. A genus of ornamental deciduous, nearly hardy shrubs. Its members thrive in common garden soil, and readily increase by cuttings or layers.
- suspensa* . . . Yellow . 3, G. De. S. 10 Japan . . . 1845
viridissima . . . Yellow . 2, H. De. S. 10 China . . . 1845
- FORTUNÆA**, *Lindley*. In compliment to Mr. Fortune, a collector for the Horticultural Society, by whom he was sent to China. *Linn.* 22, Or. 5, Nat. Or. *Juglandæca*. An empty cone of this singular plant was received some years ago from Canton by Lord Auckland, then Governor-General of India, and it was at that time supposed to belong to some unknown conifer. It was rediscovered by Mr. Fortune, who sent home seeds, which vegetated.
- chinensis* . . . Yellow . 8, G. Dec. S. 35 China . . . 1844
- FOSSIL PLANTS** are such as belong to the ancient world, and are found in a state of petrification.
- FOTHERGILLA**, *Linn.* In memory of John Fothergill, M.D., an eminent physician of London, and patron of botany. *Linn.* 13, Or. 2, Nat. Or. *Hamamelidæca*. Beautiful shrubs when in leaf and flower, growing from three to six feet high, and bearing pretty, white, sweet-scented flowers. In the shrubbery, they thrive well in a peat soil, and may be increased by layers in spring or autumn, or by seed, which is annually imported from America. *Synonymes*: 1, *F. Gardëni*; 2, *F. major*. See *Chitonia*.
- alnifolia* . . . White . . . 5, H. De. S. 4 N. Amer. 1765
albata 1 . . . White . . . 6, H. De. S. 4 N. Amer. 1765

- FOURCROYA**. See *Furcræa*.
- FOUR O'CLOCK FLOWER**. See *Mirabilis dichotoma*.
- FOUR THIEVES' VINEGAR**, a preparation from *Rosmarinus officinalis*.
- FOWLER'S SERVICE**. See *Sorbus Aucuparia*.
- FOVEATE**, } pitted, full of little pits.
FOVEOLATE, }
- FOVEOLÆ**, little pits or hollows.
- FOXGLOVE**. See *Aconitum Vulpæria*.
- FOXGLOVE**. See *Digitalis*.
- FOX-GRAPE**. See *Vitis labræca*.
- FOX-TAIL GRASS**. See *Alopecurus*.
- FRAGARIA**, *Linn.* From *fragrans*, fragrant; the perfumed fruit of the strawberry is well known. *Linn.* 12, Or. 1, Nat. Or. *Rosæca*. The cultivation and propagation of this genus is so familiar to every one, as are also the wholesomeness and deliciousness of the fruit, that neither need be particularised here any further than that seeds, sown early in spring, will generally fruit the same year very late in autumn. *Synonyme*: 1, *grandiflora*.

- FRANCOA**. Cavanilles named this genus after F. Franco, a Valencian promoter of botany in the sixteenth century. *Linn.* 8, Or. 4, Nat. Or. *Francoæca*. Beautiful plants when in flower, and well worthy a place in every collection. They may be planted out in the open ground,

in a warm sheltered situation, with a slight protection in severe weather. They can only be increased by seeds.

appendiculata. Purple 7, H. Her. P. 3 Chile . 1830
 ramosa . . . White 7, H. Her. P. 2 Chile . 1881
 sonchifolia . . Purple 7, H. Her. P. 2 Chile . 1880

FRANCOACEÆ, or FRANCOADS, Herbaceous plants without stems. All hitherto discovered are natives of Chili. The species are used in medicine and as dyes.

FRANCEÛRIA, De Candolle. See *Inula*.

FRANGÛLA, Tournefort. See *Rhamnus*.

FRANKËNIA. Named by Linnæus in honour of John Frankenius, professor of botany at Upsal, who died in 1661. *Linn.* 6, Or. 1, Nat. Or. *Frankeniaceæ*. Truly beautiful, little evergreen shrubs or herbs. The hardy kinds are particularly well adapted for ornamenting rock-work, or they may be grown in small pots, and placed among the alpine plants. The greenhouse species should be placed on the front shelf in winter. All the species grow well in loam, peat, and sand, with the pots well drained; they are easily increased by cuttings planted in sand, under a glass, by seeds, or divisions of the roots. *Synonymes*: 1, *hispida*; 2, *hirsuta*.

FRANKËNIACEÆ, or FRANKËNIADS. Herbaceous plants or small undershrubs. They form but a small order, and are but little used in their native countries for any domestic purposes.

FRANKINCENSE of Indian temples. See *Balsamodendron* and *Boswellia thurifera*.

FRANKINCENSE. See *Pinus Tæda*.

FRANZËRIA, Cavanilles. In honour of Antony Franzer, a botanist. *Linn.* 21, Or. 5, Nat. Or. *Asteraceæ*. Greenhouse shrubs of no interest. They grow in peat and loam, and may be increased by cuttings — *ambrosioides, artemisioides*.

FRASËRA. Michaux dedicated this genus in honour of John Fraser, an indefatigable collector of North American plants. *Linn.* 4, Or. 1, Nat. Or. *Gentianaceæ*. A very curious little plant, found in the morasses of North America, and successfully cultivated in peat soil, and increased by seeds or divisions. The root of this plant is a pure and excellent bitter. *Synonymes*: 1, *Waltèri*.

carolinensis 1. Grn. yel. 7, H. P. 4 Carolina. 1795

FRAXINËLLA. See *Dictamnus Fraxinella*.

FRAXINUS, Linn. From *phraxis*, a separation; the wood is used in making hedges. *Linn.* 23, Or. 2, Nat. Or. *Oleaceæ*. Most of the species are large-growing trees, well suited for plantations. *F. excelsior* is one of the most useful of our native timber trees; its wood is much used by coachmakers, wheelwrights, and for many

implements used in husbandry. Any of the kinds may be increased by budding or grafting on the common ash, but they are most frequently raised from seeds, which do not vegetate till the second year. The bark of several of the species yields a concrete discharge called *manna*, which is a sweet and gentle purgative. *Synonymes*: 1, *discolor*; 2, *crispa*; 3, *simplicifolia*; 4, *caroliniana, subserrata*; 5, *Bôscii*; 6, *Fraxinus nana*; 7, *nigra*; 8, *excelsior verrucosa*. See *Ornus* and *Pterocarya*.

- FRODS** are not leaves, but a combination of leaves and stems, as in many algae and liverworts, and also the leaves of palms and ferns.

FRONDOSE FERNS, or CLUB MOSSES. See *Lycopodium*.

FROSTED, covered with glittering particles.

FRUCTIFEROUS, that which bears fruit.

FRUCTIFICATION, all those parts composing the fruit of plants.

FRUIT ANIMALCULÆ. See *Zoocarpæ*.

FRUIT OF JOVE. See *Diospyros*.

FRUSTÛLLA, *Agardh*. From *frustula*, fragments. These species are found in fresh water.—*fasciata*, *Uva*.

FRUTESCENT, } shrubby.

FRUTICOSE, }

FRUTESCENT CELANDINE. See *Bocconia frutescens*.

FRUTICULOSE, applied to a little shrub.

FUCÆCÆ, FUCALES, or SEA-WRACKS. An extensive order of aquatic plants, most of which occupy the sea, although a few are found in fresh water. Some are eatable, others possess important medicinal properties, and others are extensively used for domestic purposes.

FUCATUS, coloured, stained.

FUCHSIA, *Plumier*. In honour of the celebrated German botanist, Leonard Fuchs, author of *Historia Stirpium*, in 1542. *Linn.* 8, Or. 1, Nat. Or. *Onagræcæ*. A most beautiful and well-known genus of plants, well worthy a place in every garden. The garden varieties are now numbered by hundreds, and some are exceedingly beautiful. Descriptions of their colours and characters are given in the nurserymen's annual catalogues. A mixture of loam and peat suits them well, but they will grow equally well in any light-rich soil; and young cuttings will root freely in sand or soil; if placed under a glass, it must occasionally be taken off to give air, or the cuttings are liable to damp. *Synonymes*: 1, *macrostemon cónica*; 2, *m. discolor*; 3, *Skinnera exorticata*; 4, *macrostemon globosa*; 5, *m. elegans*; 6, *m. gracilis*, *F. decussata*; 7, *radicans*; 8, *cordifolia*. See *Schrædera*.

SELECTION OF GARDEN HYBRIDS.—Light-coloured flowers.—*Acantha, Alice Maud, Alicia, Bell's Queen, Candidissima, Cassandra, Chandlerii, Cleopatra, Conspicua arborea, Coronet, Countess Cornwallis, Decora, Delicata, Dr. Jephson, Duchess of Sutherland, Helena, Lady Julia, Leucantha, Mrs. Lane, Napoleon, Norfolk Hero, Nymph, Prima Donna, Queen of Beauties, Roseo-alba, Sanguinea, Sanspareil, Smith's Queen Victoria, Sir H. Pottinger, Sylph, Tricolor, Venusta, Venus Victoria, Veta, Zelica*.—Dark-coloured flowers.—*Admiral, Atlas, Attraction, Bridegroom, Brockmanni, Brewsteri, Colossus, Corallina, Conductor, Countess Tyrconnel, Defiance, Eclipse, Elegans, Erecta-elegans, Ecimia, Exoniensis, Expansa, Formosa-elegans, Gem, Gigantea, Globosa superba, Globosa Devonica, Ivoryana, Kentish Bride, Kentish Hero, Lady Walsingham, Lanei, Lindleyana, Lovii, Magnet, Magnifica, Magniflora, Majestica, Paragon, President, Queen of Beauties, Recurra, Reflexa, Riccartoni, Robusta, Standishii, Stannelliana, Splendida, Willmoreana, Youellii, Youell's Queen Victoria, &c.*

FUCUS, *Linn.* Derived from *phukos*, a Greek name for sea-weed. *Linn.* 24, Or. 7, Nat. Or. *Fucæcæ*. All the species of this genus are common on the sea-coasts, especially *F. vesiculosus*, which is much employed in the manufacture of kelp, and in some of the Scottish islands it is the chief support of horses, cattle, and sheep in the winter months; while *F. serratus* is the chief food of the cattle in Norway—*canaliculatus, ceranoides, distichus, idreus, nodosus, Mackaii, serratus, tuberculatus, vesiculoides, laterifractus, linearis, longifractus, subcostatus*.

FUGACIOUS, lasting but for a short time.

FUGOSIA, *Cavanilles*. In honour of Bernard Cienfuegos, a Spanish botanist of the sixteenth century. *Linn.* 16, Or. 8, Nat. Or. *Malvæcæ*. Pretty flowering shrubs, resembling *Turæras*, propagated easily by cuttings, and requiring the temperature of the stove, or a warm greenhouse. *Synonymes*: 1, *Hibiscus cuneiformis, Lagunaria cuneiformis, H. capriodorus*; 2, *H. hakeæfolius*; 3, *H. lilacinus*.

cuneiformis 1	Wt. red 7, G. Ev. S. 4	Australia . 1856
hakeæfolia 2	Lil. red 8, G. Ev. S. 4	Swan R. . 1846
heterophylla	Yel. red 8, S. Ev. S. 4	St. Martha 1845
lilacinus 3 . . .	Lilac . 8, G. Ev. S. 5	Swan R. . 1836

FUIRÈNE, *Rottboll*. In honour of G. Fuiren, a Danish botanist. *Linn.* 3, Or. 1, Nat. Or. *Cyperacæ*. A curious species of grass, growing best in a boggy soil, and increased by divisions. *umbellata* . Apetal . 6, S. Grass 1 W. Indies . 1825

FULCRA, scales and stipules.

FULGENT, bright, glittering, shining.

FULHAM OAK. See *Quercus Cerris Fulhamensis*.

FULVOUS, tawny-yellow, or fox-coloured.

FUMARIA, *Linn.* From *fumus*, smoke; alluding to the disagreeable smell of the plant. Our English word *fumitory* is derived from the French name of the genus *Fumeterre*. *Linn.* 17, Or. 2, Nat. Or. *Fumariaceae*. *F. capreolata* and *media* are two species well worthy of extensive culture; they do best sown under a hedge, to which they will attach themselves and make a beautiful appearance. They only require sowing in the open ground. *Synonymy*: 1, *F. capreolata*. See *Corydalis*, *Cysticæpnos*, *Dilytra*, *Sarcocæpnos*.

capreolata	Flesh	7, H. Cl. A.	4 Europe	
Burchellii	Pink	4, H. A.	4 C. G. H.	. 1816
densiflora	Pink	7, H. A.	1 Montpel.	. 1824
formosa	Pink	7, H. A.	1 S. Europe	. 1816
media	Flesh	7, H. Cl. A.	3 Brit., corn fields.	
micrantha	Pink	7, H. A.	1 Spain	. 1823
spicata	Flesh	7, H. A.	6 S. Europe	. 1714
Vaillantii	Pink	7, H. A.	1 Eng., corn fields.	

officinælis, parviflora.

FUMARIACEÆ, or **FUME-WORTS**, are a small order of herbaceous plants, possessing in some species considerable beauty. They are but little used for domestic purposes.

FUMITORY. See *Fumaria*.

FUMOSUS, strong-scented.

FUNARIA, *Linn.* From *funis*, a rope; alluding to the twisted formation of the fruit-stalks. *Linn.* 24, Or. 5, Nat. Or. *Bryaceae*. Minute species of moss, found growing in tufts on rocks and cottage-roofs, during the winter and spring months. See *Entosthodon* and *Weissia*. —*hibernica, hygrometrica, Muhlenbergii.*

FUNDI, or **FUNDUNGI**. See *Paspalum exile*.

FUNERAL CYPRESS. See *Cupressus funèbris*.

FUNGI. Extensive groups of singular plants, known as blights, blasts, mildews, and mushrooms.

FUNGIFORMIS, shaped like a mushroom.

FUNGOID FLOWERS. See *Rhizogens*.

FUNGOUS, having the consistence of a mushroom.

FUNGOUS MELITENSIS, or **MALTESE MUSHROOM**, is *Cymodorium coccineum*.

FUNICLE, a little stalk, by which the seed is attached to the placenta.

FUNKIA. Named by Sprengel in honour of Henry Funk, a German cryptogamist. *Linn.* 6, Or. 1, Nat. Or. *Liliaceae*. Ornamental species, requiring a warm situation in the flower-garden, otherwise they will not flower well; they are easily multiplied by dividing the roots. *Synonyms*: 1, *Hemerocallis lanceæfolia*; 2, *H. cœrulea*; 3, *H. japonica*.

albo-margi- nata	Lilac	7, G. Her. P.	1 Japan	. 1837
lanceæfolia	Lilac	8, H. Her. P.	2 Japan	. 1829
variegata	Lilac	7, H. Her. P.	1 ½

Sieboldiana	Lilac	6, H. Her. P.	1 Japan	. 1830	
subcordata	3	White	8, H. Her. P.	1 Japan	. 1790
undulata	Lilac	8, F. Her. P.	1 Japan	. 1834	
variegata	Lilac	8, F. Her. P.	1 Japan	. 1834	

FURCATE, forked.

FURCATELY-DIVIDED, divided in a furcate manner.

FURCELLARIA, *Lamour.* From *furcella*, a little fork; alluding to the arrangement of the fronds. *Linn.* 24, Or. 7, Nat. Or. *Ceramitaceae*. A small plant, most conspicuous in spring and autumn—*fastigiata*.

FURCRAEA. Named by Ventenat, in honour of M. Fourcroy, a celebrated French chemist. *Linn.* 6, Or. 1, Nat. Or. *Amaryllidaceae*. A noble genus of plants, resembling in a great measure the genus *Agave*, and requiring the same treatment. *Synonymy*: 1, *Agave fœtida*.

australis	Green	6, S. Her. P.	4 N. Hol.	. 1811
Cântula	Gr. Yel.	7, S. Her. P.	6 China	. 1818
cubensis	Green	7, S. Her. P.	6 S. Amer.	. 1739
flavo-viridis	Gr. yel.	7, G. Her. P.	6 Mexico	. 1859
gigantea	Green	8, S. Her. P.	16 S. Amer.	. 1690
longæva	Yellow	5, G. Ev. T.	50 Mexico	. 1833
madagascariensis	Yellow	8, S. Her. P.	8 Madagas.	. 1825
rigida	Green	5, S. Her. P.	6 S. Amer.	. 1763
tuberosa	Green	8, S. Her. P.	10 S. Amer.	. 1739

FURFURACEOUS, scaly, mealy, scurfy.

FUROGGI. See *Symplocos japonica*.

FURROWED, having longitudinal furrows, or channels.

FURZE. See *Ulex europæus*.

FUSANUS, *Linn.* Derived from the French, *fusain*, a spindle tree; on account of the resemblance of the leaves and fruit. *Linn.* 23, Or. 1, Nat. Or. *Santalaceae*. A worthless, evergreen, Cape shrub, requiring the same treatment as other Cape greenhouse shrubs—*compressus*.

FUSARIUM, *Link.* From *fusus*, a spindle; alluding to the shape of the sporules. *Linn.* 24, Or. 9, Nat. Or. *Botrytaceae*. An extremely minute species, of a pinkish colour, found chiefly in spring on dead nettle stems—*roseum, tremelloides*.

FUSCOUS, blackish-brown.

FUSIDIUM, *Fries.* From *fusus*, a spindle; the sporidia are spindle-shaped. *Linn.* 24, Or. 9, Nat. Or. *Botrytaceae*. Whitish-coloured species, chiefly to be met with in autumn on dead beech leaves—*candidum, flavo-virens, griseum*. See *Fusisporium*.

FUSIFORM, spindle-shaped, like the root of a carrot.

FUSISPORIUM, *Link.* From *fusus*, a spindle, and *spora*, a seed; referring to the fusiform spores. *Linn.* 24, Or. 9, Nat. Or. *Botrytaceae*. Found on onions, decayed cucumbers, &c.—*atrovirens, aurantiacum, Buxi.*

FUSTIC-WOOD. See *Maclura tinctoria*.

G.

GÆRTNERA, *Lamarck*. In honour of J. Gärtner, M.D., F.R.S., a celebrated botanist. *Linn.* 10, Or. 1, Nat. Or. *Loganiaceæ*. These plants are ornamental, and thrive well in a mixture of loam and peat, and cuttings root readily in sandy soil, under a glass, in heat. *Synonymes*: 1, *Hiptage obtusifolia*; 2, *H. mandablotia*.

obtusifolia 1. White 4, S. Ev. Tw. 20 China. . 1810
racemosa 2. Wt. yl. 4, S. Ev. Tw. 15 E. Indies. 1796

GÆGEA, *Salisbury*. In honour of Sir Thomas Gage, a botanical amateur. *Linn.* 6, Or. 1, Nat. Or. *Liliaceæ*. The species of this genus are very handsome, and thrive well in any light soil, in the open ground, and may be readily increased from offsets. *Synonymes*: 1, *Ornithogalum bohemicum*; 2, *O. luteum*; 3, *O. luteum*, *Gægea lutea*; 4, *O. pygmaeum*; 5, *Anthericum serotinum*; 6, *O. minimum, arvense*; 7, *O. striatum*; 8, *O. uniflorum*; 9, *O. fistulosum*.

GALACTIA, *P. Brown*. From *gala*, milk. *G. pendula* yields a milky juice when cut or broken. *Linn.* 17, Or. 4, Nat. Or. *Fabaceæ*. These are very handsome plants, especially *G. pendula*, which is a very desirable twiner. They require precisely the same treatment in culture and propagation as *Clitoria*, except that the North American species do not require to be grown in heat. *Synonymes*: 1, *Ervum volubile*; 2, *Hedysarum volubile*. See *Barbiera*.

<i>cubensis</i> . . .	Rose 7,	S. Her. Cl. 4	Cuba	. . . 1826

GALLACEÆ, or STELLATES. An order of herbaceous plants, with whorled leaves and angular stems, separated from *Cinchonaceæ*. They are very common weeds, natives of the cooler parts of the northern hemisphere. Madder (*Rúbia tinctoria*) is a well-known dye, and all the stellates possess this quality in a greater or less degree.

GALIUM, Linn. From *gala*, milk; the flowers of *G. vérum* are used for curdling milk. *Linn.* 4, Or. 1, Nat. Or. *Galiaceæ*. This is an extensive genus of plants, of very little merit. They all grow well in common garden soil. The herbaceous kinds are increased by dividing the roots, and the annuals need only be sown in the open ground. *Synonymes*: 1, *gláicum*; 2, *reflexum*, *Valántia tábrica*; 3, *G. anisophýllum*; 4, *Valántia cucullária*; 5, *G. vérum*; 6, *saxatíle*; 7, *murdle*; 8, *hispidum*; 9, *saccharátum*, *Valántia Aparine*; 10, *Aparine Vaillántii*. See *Aspérula*, *Sherardia* and *Valántia*.

GARCÍNIA, *Linn.* In honour of Laurent Garcin, M.D., F.R.S., an oriental traveller. *Linn.* 11, Or. 1, Nat. Or. *Clusiaceae*. This is a valuable and much admired genus of fruit-bearing trees. The plants thrive best in a light loamy soil with a little peat mixed: they require a strong moist heat to flourish well, and ripened cuttings will root in sand, under a glass, in a moist heat. The *G. Mangostana* bears a fruit which, in the East Indies, ranks with that of the pine-apple. It rises with a taper stem, sending out many branches, not unlike a fig-tree, with oval leaves, seven or eight inches long. The flower is like that of a single rose; the fruit round, the size of a middling orange; the shell is like that of the pomegranate, the inside of a rose colour, divided by thin partitions, as in oranges, in which the seeds are lodged, surrounded by a soft juicy pulp, of a delicious flavour, partaking of the strawberry and the grape, and is esteemed one of the richest fruits in the world. According to Dr. Garcin, it is esteemed the most delicious of the East Indian fruits, and a great deal of it may be eaten without any inconvenience; it is the only fruit which sick people are allowed to eat without scruple. It is given with safety in almost every disorder; and we are told that Dr. Solander, in the last stage of a putrid fever in Batavia, found himself insensibly recovering by sucking this delicious and refreshing fruit. The pulp has a most happy mixture of the tart and sweet, and is no less salutary than pleasant. All the other species bear excellent fruit, but by no means equal to the *Mangostana*. *C. Gambôgia* produces the gamboge of commerce: the fruit is powerfully purgative.

GARDÊNIA, *Ellis*. Named in compliment to Alexander Garden, M.D., of Charleston, Carolina, a correspondent of Ellis and Linnæus. *Linn.* 5, Or. 1, Nat. Or. *Cinchonaceae*. This

is a splendid genus of plants, producing their sweet-scented flowers very freely. They require a mixture of loam and peat; and the stove kinds, a strong moist heat and plenty of water at the roots. Cuttings of all root readily if not too ripe when taken off, planted in sand, under a glass, in a moist heat, with the pots plunged. *Synonymes*: 1, *Mussaenda spinosa*; 2, *Cánthium coronatum*, *Posoquéria dumetorum*; 3, *Posoquéria fragrans*; 4, *P. longispina*; 5, *nütans*; 6, *Cánthium chinense*; 7, *Mussaenda tetraacantha*; 8, *Randia longistyla*; 9, *G. longifolia*. - GARRYACEÆ.** A small order of shrubs with opposite leaves, and pendulous amentaceous racemes of flowers; they are found in North and Central America in temperate latitudes, and in the West Indies.
- GARUGA, Roxburgh.** The Telingas call it Garuga, or Garoogoo. *Linn.* 10, Or. 1, Nat. Or. *Burséraceæ*. An ornamental genus, attaining the height of twenty feet; for culture and propagation, see *Boswellia*.
- pinnata . . Yel. 5, S. Ev. T. 20 E. Indies . 1808
madagascariensis Yel. 5, S. Ev. S. 20 Madagasc. 1824
- GASTERIA, Haworth.** Derived from *gaster*, the belly; alluding to the enlarged base of the flowers. *Linn.* 6, Or. 1, Nat. Or. *Liliaceæ*. These plants are all extremely interesting, and remarkable for producing their leaves, more or less regular, in two rows. Sandy loam, a little leaf-mould, and peat, well mixed together, with a small quantity of brick rubbish, is the best compost for them; and being of a very succulent nature, they require to be only moderately watered at any time, particularly when not growing. They all increase from suckers, or leaves, which will produce young plants from their base, as *Furcraea* and *Aloe*.
Synonymes: 1, *longifolia*; 2, *nigricans*; 3, *nigricans fasciata*.

- GAYA**, *Kunth*. After M. Gay, a distinguished French botanist. *Linn.* 16, Or. 8, Nat. Or. *Malvaceæ*. See *Sida*.
- GAYLUSSACIA**, *Humboldt* and *Bonpland*. Named after M. Gay Lussac, the eminent French chemist and philosopher. *Linn.* 18, Or. 1, Nat. Or. *Vaccinaceæ*. A very pretty hardy greenhouse shrub, thriving in a mixture of sandy peat and leaf-mould. It may be raised from seeds or layers, as *Vaccinium*; the same temperature as for Cape Heath suits it. *Synonymes*: 1, *Andrömeda coccinea*; *Vaccinium brasiliense*.
- pseudo-vaccinium Red . 5, H. Ev. S. 1 $\frac{1}{2}$ Brazil . 1844
- GAZANIA**, *Gærtner*. From *gaza*, riches; alluding to the splendour of the flowers. *Linn.* 19, Or. 3, Nat. Or. *Asteraceæ*. Very showy and interesting plants, of easy management. Peat and loam suits them best, and young plants are obtained from cuttings in sand, under a glass. *G. subulata* may also be increased by dividing the roots. *Synonyme*: 1, *Gorteria rigens*.
- heterophylla . . . Orange 7, G. Her. P. $\frac{1}{2}$ C. G. H. 1812
 pavonia . . . Yellow 7, G. Her. P. 1 C. G. H. 1804
 rigens 1 . . . Orange 6, G. Ev. S. 1 C. G. H. 1755
 subulata . . . Yellow 7, G. Her. P. 1 C. G. H. 1792
 uniflora . . . Yellow 7, G. Ev. S. 1 C. G. H. 1816
- GEÄSTER**. See *Gedstrum*.
- GEÄSTRUM**, *Michaux*. From *ge*, the earth, and *aster*, a star; star-like appearance of the plants. *Linn.* 24, Or. 9, Nat. Or. *Lycoperdaceæ*. Small, mostly brownish species, found most plentiful in pine-woods and pastures during the autumn months. *Synonyme*: 1, *Lycoperdon recolligens*—*Bryantii*, *coliforme*, *multifidum* 1, *quadrifidum*, *striatum*, *striatum minus*, *Woodwardi*.
- GEBANG PALM**. See *Coriöpha Gebänga*.
- GEBLERA**, *Fischer* and *Meyer*. In honour of Gebler, a German botanist. *Linn.* 5, Or. 1, Nat. Or. *Euphorbiaceæ*.
- suffruticosa . . . H. De. S. Russia . 1835
- GEISSOIS**, *Labil*. From *Geisson*, the caves of a house; the seeds are imbricated like the tiles of a house. *Linn.* 8, Or. 1, Nat. Or. *Crononi-*

accæ. A very pretty plant, with bright crimson flowers, hanging in racemes. It forms a handsome tree, thriving in very sandy loam and a little peat, and is increased by cuttings planted in sand, under a glass, in heat.
racemosa . Crimson 5, G. Ev. T. 20 N. Caledon. . 1850

GEISSOMERIA, *Lindley*. From *geisson*, a tile, and *meris*, a part; in allusion to the imbricated calyx. *Linn.* 14, Or. 2, Nat. Or. *Acanthaceæ*. These are very handsome species; rich soil, comprising loam and rotten dung, suits them best; and cuttings root without difficulty, either in sand or soil, under a glass, in heat.
Synonyme: 1, *Ruellia fulgida*.
fulgida 1 . Scarlet 8, S. Ev. S. 3 W. Indies 1804
fulgida . . . Scarlet 7, S. Ev. S. 3 Brazil . . 1825
nitida . . . Scarlet 8, S. Ev. S. 3 Brazil . . .

GEISSORHIZA, *Ker*. From *geisson*, a tile, and *rhiza*, a root; shape of the root. *Linn.* 3, Or. 1, Nat. Or. *Iridææ*. Handsome Cape bulbs; for culture, &c., see *Galaxia*.

GEITONOPLESIMUM, *Cunningham*. From *geiton*, neighbour, and *plesion*, near; alluding to the scrambling habit of the plants. *Linn.* 6, Or. 1, Nat. Or. *Liliææ*. These form a genus of curious and ornamental plants, requiring to be grown in a mixture of peat and loam, or sandy peat; and increasing by cuttings in sand, under a glass. *Synonymes*: 1, *Luzuriaga cymösa*; 2, *L. montana*.
asperum . . . Green 5, G. Her. P. 1 N. Hol. . 1831
cymösium 1 . Green 5, G. Ev. Tw. 1 N. S. W. 1825
montanum 2 . Green 5, G. Her. P. 1 N. Hol. . 1820

GELA, *Loureiro*. From *gelo*, to shine; supposed to refer to the leaves. *Linn.* 8, Or. 1, Nat. Or. *Xanthoxylææ*. Ornamental plants, succeeding in sandy peat, and increased by cuttings planted in sand, under a glass. *Synonyme*: 1, *Selas lanceolata*. See *Cymindöma*.
lanceolata 1 . Yellow 6, G. Ev. S. 4 Cochin Ch. 1820
oblongifolia . Wht.gr. 6, G. Ev. T. 8 N. Hol. . 1823

GELASINE, *Herbert*. From *kelas*, the latter season; continues in flower until late; or perhaps from *gelasinas*, a smiling dimple, alluding to the delicacy of the flowers. *Linn.* 6, Or. 1, Nat. Or. *Iridææ*. A hardy herbaceous plant, growing freely in common soil in the open borders, and increased by division of the roots.
azorea . . . Blue . 4, H. Her. P. 1 1/2 N. Amer. . 1838

GELATINE, jelly, a term in chemistry.
GELATINOUS, consisting of jelly.
GELIDUS, cold, frigid.
GELONIUM, *Roxburgh*. The meaning unknown. *Linn.* 22, Or. 2, Nat. Or. *Euphorbiææ*. Unin-

teresting stove shrubs, of the easiest culture—*bifarium, fasciculatum, lanceolatum*.

GELSEMIUM, *Jussieu*. An Italian name of the jasmine. In America the species is known under the name of *Carolina Jessamine*. *Linn.* 5, Or. 1, Nat. Or. *Bignoniææ*. This species is not possessed of much beauty; it thrives best in sandy peat, and cuttings root readily under a glass. *Synonyme*: 1, *Bignonia sempervirens*.

sempervirens . Yellow 6, F. Ev. Cl. 6 N. Amer. 1640
GEMINATE, twin, producing flowers or leaves in pairs.

GEMMÆ, leaf buds, as distinguished from *alabastra*, or flower-buds.

GEMMIFEROUS, bearing buds.
GENDARUSSA, *Nees*. An alteration of the Indian name. *Linn.* 2, Or. 1, Nat. Or. *Acanthææ*. See *Justicia*.

GENETÝLLIS, *De Candolle*. Meaning unknown. *Linn.* 12, Or. 1, Nat. Or. *Myrtææ*. For culture, see *Myrtus*. *Synonyme*: 1, *G. pubescens*.

diosmoides . White 4, G. Ev. S. 3 Australia . 1827
Hookeriana 1 . Scarlet 6, G. Ev. S. 2 Australia . 1854
macrostegia . Red 6, G. Ev. S. 2 Australia . 1854

GENIP-TREE. See *Genipa*.
GENISTA, *Lamarck*. Derived from the Celtic word *gen*, a small bush. *Linn.* 10, Or. 6, Nat. Or. *Fabææ*. These are all exceedingly ornamental and free-flowering plants. The greenhouse and frame kinds thrive best in a mixture of loam, peat, and sand; and young cuttings planted in sand, under a glass, root very readily. The hardy species are particularly adapted for the front of shrubberies, on account of their generally low growth; they may be increased from layers or seeds. Some of the species are purgatives, and others are diu-

retics. *Synonymes*: 1, *Spärtium aethnense*; 2, *angulatum*; 3, *aphyllum*; 4, *cinereum*; 5, *sericeum*; 6, *congestum*; 7, *ferox*; 8, *linifolium*; 9, *monospermum*; 10, *parviflorum*; 11, *patens*; 12, *Genista prostrata*; 13, *Spärtium purgans*; 14, *radiatum*; 15, *Genista januensis*; 16, *Spärtium Scörpius*; 17, *sphaerocarpon*; 18, *umbellatum*; 19, *virgatum*; 20, *Cytisus racemibis*; 21, *Spärtium interruptum*. See *Adenocarpus* and *Cyclöpia*.

GENITALS, styles and stamens.

GENTIANA. See *Gentiana*.

GENTIANA, *Linn.* After *Gentius*, king of Illyria, who first experienced the virtues of the plant. *Linn.* 5, Or. 2, Nat. Or. *Gentianaceae*. This is an extremely beautiful genus of plants; most of the herbaceous kinds grow well in a rich light soil, but some require to be grown in peat; indeed, all will grow much stronger in it. Some of the species should be grown in

pots, and placed among alpine plants, and protected in winter; some of them may be increased by divisions. The annual and biennial kinds may be sown in a dry sandy situation, in the open border; but the seeds must be sown as soon as ripe, for if left till spring before they are sown, they will not, very probably, come up till the second year. The stems and roots of most of the species, especially *G. Amarella*, *campéstris*, *cruciata*, *lutea*, and *purpurea* are tonic, stomachic, and febrifugal. *Synonymes*: 1, *quinqueflora*; 2, *ciliata*; 3, *fimbriata*; 4, *ciliata*; 5, *amarelloides*; 6, *Pneumonanthe pseudo-pneumonanthe*.

GENTIANACEÆ, or **GENTIAN-WORTS**, form a well-known order of plants, principally herbaceous, and extending over almost all parts of the world. Bitterness in roots, leaves, and flowers are their characteristics, and on this account they are much used in medicine.

GENTIANELLA. See *Gentiana*.

GEODORUM, *Jackson*. From *ge*, the earth, and *doron*, a gift. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. These are rather interesting plants, succeeding well in a hot, damp stove, with the same treatment as is recommended for *Bletia*.

GEOFFROYA, *Jacquin*. In honour of M. E. F. Geoffroy, author of *Materia Medica*, who died in 1731. *Linn.* 17, Or. 4, Nat. Or. *Fabaceæ*. Stove trees, from twenty to thirty feet high; loam and peat mixed suits them well, and cuttings root freely in sand, under a glass, in heat. See *Andira*.

spinosa . . .	Yellow 6, S. Ev. T. 25	S. Amer. . 1818
violacea . . .	Violet 7, S. Ev. T. 20	Guiana . . 1823

GEOGLOSSUM, *Persoon*. From *ge*, the earth, and *glossa*, tongue; alluding to the form of the plants. *Linn.* 24, Or. 9, Nat. Or. *Helvellaceæ*. Small species of a brownish colour, found in autumn among grass, and in moist meadows; whence the English name *Earth-Tongue*—*difforme*, *glabrum*, *glutinidum*, *hirsutum*, *viride*, *viscidum*.

GEONOMA, *Willdenow*. From *geonomos*, skilled in agriculture; the species are difficult to propagate. *Linn.* 22, Or. 6, Nat. Or. *Palmaceæ*. A fine genus of palms, the species of which grow from four to twenty feet high. They require to be grown in a rich sandy loam, and a strong heat. They can only be increased from seed, which, in this country, is seldom produced.

GEOPHILA, *Don*. From *ge*, the earth, and *phileo*, to love; alluding to the trailing habit of the plant. *Linn.* 5, Or. 1, Nat. Or. *Cinchonaceæ*. A minute species, with but little beauty, and of easy cultivation. *Synonyme*: 1, *Psychotria herbacea*.

reniformis	1 Pa. red 6, S. Her. Tr. 3	W. Indies . 1793
------------	----------------------------	------------------

GEORGINA. See *Dahlia*.

GERANIUM. Named by Linnæus from *geranos*, a crane; in allusion to the crane-like beak terminating the carpels. *Linn.* 16, Or. 6, Nat. Or. *Geraniaceæ*. Some species of this extensive genus produce very handsome flowers, while others are mere weeds. The greenhouse

and frame kinds thrive in loam and peat, mixed with vegetable soil, and are easily increased from cuttings or seeds. The hardy kinds do well in the open border; *G. argenteum*, however, requires to be protected in winter: they ripen seeds freely, from which they may be increased. The annual kinds merely require to be sown in the open border. In North America they consider the root of *G. maculatum* a valuable astringent, and in North Wales, *G. Robertianum* is used in nephritic complaints. *Synonymes*: 1, *varium*; 2, *albannum*; 3, *prostratum*; 4, *Londæsi*; 5, *pyrenaicum*, *nemorum*; 6, *rabifolium*. See *Erodium*, *Pelargonium* and *Sarcocaulon*.

GERANIACEÆ. An order of herbaceous plants and shrubs, possessing an astringent principle and an aromatic or resinous flavour. The Peltargoniums are chiefly noted for their beautiful flowers.

GERÁRDIA, Linn. In honour of John Gerard, a famous old English botanist, and author of Gerard's Herbal, published in 1597. *Linn.* 14, Or. 2, Nat. Or. *Scrophulariaceæ.* These are handsome plants, growing well in a peaty soil. The perennial kinds may be increased by cuttings planted under a glass; but the best way of obtaining young plants is by seed. See *Rehmannia, Seymèria, and Pterostigma.*

GESNERACEÆ. An extensive order of little soft-wooded herbs or shrubs; they generally possess considerable beauty, and inhabit the hotter parts of the world.

GETHÝLLIS, Linn. From *getho*, to rejoice; alluding to the perfume of the flowers. *Linn.* 6, Or. 1, Nat. Or. *Amaryllidaceæ.* These small, ornamental, Cape plants thrive best in a mixture of sandy loam and peat, and require but little water when not in a growing state; they are increased by offsets from the bulbs, or by seeds.

Àtra . . .	White 7, G. Bl. P. ½	C. G. H. . .	1820

GISEKIA, *Linn.* In honour of P. D. Giseke, a Danish botanist. *Linn.* 5, Or. 5, Nat. Or. *Phytolaccaceae*. A curious little plant, requiring the same treatment as other tender annuals,

pharnacoides . Pa. gr. 6, S. A. 1 E. Indies . 1788

GITHAGO. See *Lychnis*.

GLABROUS, smooth, destitute of hairs.

GLACIALIS, having a frozen appearance.

GLADIATE, shaped like a short straight sword.

GLADIOLUS, *Linn.* From *gladius*, a sword; alluding to the sword-shaped leaves. *Linn.* 3, Or. 1, Nat. Or. *Iridaceae*. This is an extensive genus, consisting chiefly of beautifully flowering Cape bulbs. The species thrive best in a mixture of very sandy loam and decayed leaves, or peat soil, and require no water after they have done flowering till they begin to grow afresh. In the month of October they should be taken out of their pots and replanted in fresh soil, when they should be set in a cool frame, or some such place, as they require to be only protected from frost till such time as their pots are full of young roots; then they may be set in a warmer situation, and watered regularly, and they will flower freely. The hardy species thrive well in a light sandy soil, and are rapidly increased, as well as the tender kinds, by offsets from the bulbs; they require to be planted in a warm south border. If intended to remain in the ground all the winter, the smaller bulbs must be planted six inches deep, and the larger ones eight inches, so as to be out of the reach of frost; they should also be covered with a little dry litter in severe frost, or they may be taken up in autumn, and laid to dry all the winter where the frost cannot hurt them; they must then be planted early in spring, and they will generally flower well. *Synonyme*: 1, *G. psittacinus*. See *Anisanthus*, *Babiana* and *Synndia*.

GLOCHIDATE, having hairs, the ends of which are split and hooked back.

GLOMERATE, } gathered into round heaps, or
GLOMERATED, } heads.

GLORIOSA, *Linn.* Derived from *gloriosus*, glorious; because of the magnificent flowers. *Linn.* 6, Or. 1, Nat. Or. *Liliaceæ*. This is a truly handsome and curious genus of plants, well worthy of cultivation in every collection of stove plants. The following method of treatment is given by the late Mr. Sweet:—"We have found them succeed best, and flower luxuriantly, by being planted in rather more than one-third turfy loam, full one-third white sand, and the remainder peat; as soon as planted, to be set in a hotbed frame till they have begun to grow; then move them to a warm part of the hothouse, and as they grow, train them up a stick or wire, where they will flower, and if a little pains be taken to fertilise the stigmas with the pollen when in bloom, they will produce plenty of seeds, which should be sown as soon as gathered. After flowering, the stems must be let die down, and they require no more water; the pots may then be laid on their sides, in a dry situation, and there left till the March following, when they should be planted." Young plants are generally obtained by dividing the roots; they are also raised from seeds. *Synonyme*: 1, *simplex*.

GLORIOSUS, superb, grand.

GLORY PEA. See *Clanthus*.

GLOSSANTHUS, *R. Brown.* See *Klugea*.

GLOSSASPIS, *Lindl.* From *glossa*, a tongue, and *aspis*, a serpent. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. A genus of no particular beauty, the flowers being small and inconspicuous. Treat similar to other terrestrial orchids.

tentacula . . .	Green	4, G. Ter. 1	China	1840
-----------------	-------	--------------	-------	------

GLOSSASPIS. See *Glossula*.

GLOSSOCARDIA. See *Verbesina*.

GLOSSOCOMIA, *D. Don.* From *glossokomos*, a money-bag; in allusion to the shape of the flowers. *Linn.* 5, Or. 1, Nat. Or. *Campanulaceæ*. A hardy perennial, with pretty campanulate flowers, growing about one and a half feet high. It flourishes in any good garden soil, and is easily increased by seeds. *Synonyme*: 1, *Codonopsis ovata*, *Wahlenbergia Rivini*, *W. clematidea*.

ovata 1 . . .	White	7, H. Her. P. 1	N. India	1830
---------------	-------	-----------------	----------	------

GLOSSODIA, *R. Brown.* From *glossa*, a tongue, and *oidos*, like; alluding to the tongue-like appendage within the flower. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. Pretty plants, thriving well in sandy loam and peat, and increased by offsets from the roots. They require very little water when not in a growing state.

majör . . .	Blue	6, G. Ter. 1	N. Holl.	1810
minor . . .	Blue	6, G. Ter. 1	N. Holl.	1810

GLOSSOLOGY, that part of botany which teaches the meaning of technical terms.

GLOSSULA, *Lindley.* From *glossa*, a tongue; in allusion to the tongue-like segments of the labellum. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. A curious species, with very minute green flowers. It requires the heat of the stove, and to be otherwise treated like *Glossodia*.

tentaculata . . .	Green	12, S. Ter. 2	China	1824
-------------------	-------	---------------	-------	------

GLOTTIDIUM, *Desfontaines.* From *glotta*, a tongue; and the valves of the legume separate into two membranes each, which have been compared to the superior opening of the larynx. *Linn.* 17, Or. 4, Nat. Or. *Fabaceæ*. A tall growing plant, the seeds of which require to be sown in peat and sand, and placed in heat, and when of sufficient size, planted singly in the same kind of soil, and shifted into larger pots as they grow. *Synonyme*: 1, *Phaca floridana*, *Sesbania dispersa*, *Aschynomena platycarpa*.

floridana 1 . . .	Yellow	7, G. A. 2	Florida	1816
-------------------	--------	------------	---------	------

GLOXINIA, *L'Heritier.* Named in honour of P. B. Gloxin, a botanist of Colmar. *Linn.* 14, Or. 2, Nat. Or. *Gesneraceæ*. A splendid genus of plants, well deserving of extensive cultivation; they thrive best in a rich soil, consisting of loam, peat, and sand, in equal quantities, with a little vegetable soil, well mixed together. In the summer they should have a plentiful supply of water; in winter they require very little water. *G. maculata* is easily increased by divisions. The leaves of most of the others, if taken off close to the stem, and planted, will soon make young plants.

GLUMACEOUS ; plants are said to be glumaceous when their flowers are like those of grasses.

GLUME, a part of the floral envelopes of a grass. GLUTEN, glue.

GLUTINOUS, } adhesive, gluey.

GLYCERIA, *R. Brown*. From *glykeros*, sweet ; alluding to the herbage. *Linn.* 3, Or. 2, Nat. Or. *Graminææ*. An aquatic of no interest or beauty ; it is of the simplest culture. *Synonymy*: 1, *Festuca fluitans*—*fluitans*. See *Hydrochloa*.

GLYCINE, *Linn.* From *glykys*, sweet ; the leaves and roots of some of the species are sweet. *Linn.* 17, Or. 4, Nat. Or. *Fabæææ*. A beautiful genus of plants, producing their pretty flowers in fascicles, or racemes, from the axils of the leaves ; for culture and propagation, see *Citidria*. *Amphicarpa*, *Apios*, *Chaetocalyx*, *Fagelia*, *Poirétia*, *Rhynchostia*, *Róthia*, *Rudóphia*, *Sweetia*, *Voandzeia* and *Wistária*.

debilis, *parviflora*.

GLYCÓSMIS, *Correa*. From *glykys*, sweet, and *osme*, smell ; alluding to the sweet-scented flowers. *Linn.* 10, Or. 1, Nat. Or. *Aurantiacææ*. These trees are said to attain the height of twenty feet, and thrive well in a rich mould. They may be increased by cuttings in sand, under a glass, in heat. *Synonymes*: 1, *Limónia citrifolia*, *L. parviflora* ; 2, *Limónia pentaphylla*.

arborea White . 7, S. Ev. T. 20 E. Ind. . 1796
citrifolia 1 White . 2, G. Ev. S. 6 China . 1820
pentaphylla 2 White . 7, S. Ev. T. 20 E. Ind. . 1790

GLYCYRRHIZA, *Tournefort*. From *glykys*, sweet, and *rhiza*, a root ; and the sweetness of the root of the Liquorice is well known. *Linn.* 17, Or. 4, Nat. Or. *Fabæææ*. A deep light sandy loam suits all the species of this genus, and they are readily increased by slips from the roots with eyes, and planting them in spring. The sweet, subacid, mucilaginous juice is much esteemed as a pectoral. *Synonymes*: 1, *aspera*, *hispida* ; 2, *Liquiritia officinális*.

GLYPHOFTRION, *Bridel*. From *glypho*, to emboss, and *místrion*, a little diadem. *Linn.* 24, Or. 5, Nat. Or. *Bryæææ*. Small tufts of moss, found on rocks in the spring. *Synonymy*: 1, *Grámnia Daviési*, *Encalypta Daviési*—*Daviési*.

GMELINA, *Linn.* In honour of George Gmelin, a celebrated German naturalist and traveller.

Linn. 14, Or. 2, Nat. Or. *Verbenæææ*. This is a genus of fine plants, though they seldom flower in this country. They grow best in rich loam, mixed with a little peat, requiring a very strong heat to grow them well. They may be increased without difficulty by cuttings planted in sand, in heat, under a glass. *Synonymy*: 1, *Cambúlu*.

GNAPHALIUM, *Linn.* From *gnaphalon*, soft down ; alluding to the woolly covering of the plants. *Linn.* 19, Or. 2, Nat. Or. *Asteræææ*. Some of these are interesting plants, on account of the quality the flowers possess of retaining their colours after they are gathered from the plants. They grow in any rich light soil, and the shrubby and herbaceous kinds may be increased by cuttings and divisions. The annual and biennial kinds require the same treatment as other tender and hardy annuals and biennials. *Synonymes*: 1, *Filago arvensis* ; 2, *F. cephaloideum* ; 3, *Gnaphalium spicatum* ; 4, *F. gállicæ* ; 5, *germánica* ; 6, *alpéstris* ; 7, *Lagópus* ; 8, *montána* ; 9, *G. spatulata* ; 10, *F. pusilla* ; 11, *pyramidata* ; 12, *recta* ; 13, *sphérica* ; 14, *G. alpinum* ; 15, *F. sylvática* ; 16, *G. multicaule*. See *Antennaria*, *Astéma*, *Helichrysum*, *Leontopodium*, *Longchampsia*, *Metalasia* and *Spirálepis*.

GNEMON. See *Gnetum*.
GNETUM, *Linn.* Derived from *gnemon* ; the name given to it in the island of Ternate. *Linn.* 21, Or. 1, Nat. Or. *Gnetæææ*. This plant will grow in sandy peat and loam mixed ; it is multiplied by cuttings in sand, under a glass, in heat. In Amboyna, they eat the seeds roasted, boiled, or fried, and the tasteless green leaves form a favourite vegetable in lieu of spinach.
Gnemon Grn brn. 6, S. Ev. T. 10 E. Ind. . 1815

GNETACEÆ, or JOINT-FIRS. An order of small trees or shrubs, nearly related to *Pinacææ*. Some species bear eatable fleshy fruit, and the leaves of others are boiled and eaten as spinach.

GNIDIA, *Linn.* The ancient name of the laurel. *Linn.* 8, Or. 1, Nat. Or. *Thymelæææ*. The species of *Gnidia* are very pretty, and thrive well in a peat soil, if carefully watered, in which respect they require particular attention, as they have very tender roots. They are rather difficult to propagate, particularly

- G. radiata*; the shoots should be taken off when young, planted in sand, under a glass, and placed where there is not much damp. *Synonymes*: 1, *denudata*; 2, *acerdsa*. See *Lachnæa*.

GOMPHONEMA, *Agardh*. From *gomphos*, a club, and *nema*, a filament; filaments wedge-shaped. *Linn.* 24, Or. 7, Nat. Or. *Diatomaceæ*. Minute plants, of a yellowish colour, found in lakes and Alpine rivulets—*ampullaceum*; *gemindatum*, *minutissimum*, *paradoxum*.

GOMPHOSTYLIS, *Willd.* See *Pleione*.

GOMPHRENA, *Linn.* From *gomphos*, a club; alluding to the shape of the flowers. *Linn.* 5, Or. 1, Nat. Or. *Amarantaceæ*. The Globe Amaranth, which is the type of this genus, is well known for its round heads of purple and white flowers. They will succeed in rich mould; but to grow them very fine, they require a great deal of attention to shifting, watering, &c.; they all increase from seeds, and the shrubby kinds from cuttings also. See *Oplotheca*.

GOMPHUS, *Fries*. From *gomphos*, a club; in reference to the shape of the plants. *Linn.* 24, Or. 9, Nat. Or. *Agaricaceæ*. Small species, found in pine woods during the summer and autumn months—*glutinósus*, *ritillus*.

GOMBUS, *Rumphius*. Its name in Malabar. *Linn.* 21, Or. 9, Nat. Or. *Palmaceæ*. This is a fine palm, described as growing upwards of forty feet high; it requires a strong heat and

rich mould, and can only be increased by seeds.

saccharifer . Str. . 6, S. Palm 40 Moluccas . 1829
GONATANTHUS, *Klotzsch*. From *gonia*, an angle, and *anthos*, a flower. *Linn.* 21, Or. 7, Nat. Or. *Araceæ*. A singular stemless herb, requiring the same treatment as *Pòthos*. *Synonyme*: 1, *Caladium sarmentósum*.

GORDONIA, *Ellis*. In honour of Alexander Gordon, a celebrated nurseryman at Mile End, London, who lived in the time of Miller. *Linn.* 16, Or. 2, Nat. Or. *Ternstroemiaceæ*. This is a genus of elegant plants, well deserving of extensive cultivation on account of their large and beautiful flowers. The plants are hardy enough to stand our British winters in the open air, yet the young shoots often get injured, owing to the shortness of our summer not suffering them to ripen the wood, or even to flower in perfection; they should therefore be treated as greenhouse plants. The best soil for them is peat, mixed with a little loam; they are readily increased by layers, or cuttings in sand, under a glass. *G. Haematocylon* requires to be grown in the stove; and cuttings of the ripened wood will root in sand, under a glass, in heat. *Synonyme*: 1, *Lacathea fibrada*. See *Polygona*.

GORY-DEW. See *Palmella cruenta*.

GOSSYPIUM, *Linn.* From *goz*, or *gothn*, an Arabic word, signifying a soft substance; whence the Latin and English name of the genus. The name of the cotton-tree in Egypt is *Gotnense-giar*. *Linn.* 16, Or. 8, Nat. Or. *Malvaceæ*. This is a highly valuable genus of plants, especially the species *barbadense* and *herbaceum*, the former being extensively cultivated in the West Indies, and the latter in the south of Europe. A light rich soil and a moist heat suit all the species best. Cuttings of the shrubby kinds, if not too ripe, will root freely in a light soil, under a glass; they may also be increased by seeds. The annual and biennial species should be sown in pots in spring, and placed in heat, and when the plants are of sufficient size, they should be planted singly into small pots, and shifted as they grow. See *Cochlospermum Gossypium*.

GRÉWIA, *Jussieu*. In honour of Nehemiah Grew,

M. D., F. R. S., a famous English vegetable physiologist, who died in 1711. *Linn*. 13, Or. 1, Nat. Or. *Tiliaceae*. These are shrubs, with elm-looking leaves, but not possessed of any great beauty; they succeed in sandy loam and peat, and cuttings root in sand, under a glass, in heat. The fruit of *G. asiatica* is acid and pleasant; it is much used in the manufacture of sherbet. *Synonymes*: 1, *Mallockea crenata*; 2, *G. hirsuta*.

GRAS, *Linn*. From *grao*, to eat; the fruit is edible. *Linn*. 13, Or. 1, Nat. Or. *Barringtoniaceae*. This is an elegant fruit-bearing tree, from thirty to fifty feet high, with leaves about three feet long, and large flowers growing out of the stem and old branches; it thrives best in a loamy soil, and large cuttings will root under a handglass, in heat. In the West Indies, the fruit is eaten under the name of *Anchovy Pear*. It is of a brown russet colour, and the size and shape of an alligator's egg. It is pickled, and eaten in the same way as the East Indian mango, and is very similar to that fruit in taste. To grow it for fruit, it should be planted in a border, and trained near the light.

cauliflora . White . 5, S. Ev. T. 40 Jamaica . 1768

GRIELUM, *Linn*. From *grielum*, old, grey; hoary aspect of the plants. *Linn*. 10, Or. 4, Nat. Or. *Rosaceae*. Pretty Cape plants, will thrive best in sandy gravel, with the pots well drained, as they are very impatient of water. Cuttings root with the greatest ease in the same kind of soil, with or without glasses.

humifsum	Yel.	5, G. Her. P.	1 C. G. H.	1825
laciniatum	Yel.	8, G. Her. P.	3 C. G. H.	1825
lanatifolium	Yel.	5, G. Her. P.	2 C. G. H.	1780

GRIFFINIA, *Ker*. In honour of William Griffin, Esq., of South Lambeth. *Linn*. 6, Or. 1, Nat. Or. *Amaryllidaceae*. These are very pretty bulbous plants, which succeed best in a mixture of rather more than one-third turfy loam, a third of white sand, and the rest peat, keeping them quite dry when in a dormant state;

- but as soon as they begin to grow, or show bloom, they must be well supplied with water. An airy situation suits them best; they may be increased by offsets from the bulbs, or by seeds.

GUAYACINE. A peculiar substance, differing both from gum and resin, found in the various species of *Guaiacum*.

GUAZÚMA, *Plumier*. The name of the plant in Mexico. *Linn.* 18, Or. 1, Nat. Or. *Sterculiaceæ*. These are ornamental trees, described as growing from twenty to forty feet high; they thrive in a mixture of peat and loam, and increase from cuttings in sand or soil, under a glass, in heat. *Synonymes*: 1, *Bubröma guazúma*, *Theobroma guazúma*; 2, *Bubröma polybotryum*.

polybotrya 2 . . . Yel. . 6, S. Ev. T. 25 Brazil . 1816
tomentosa Yel. . 6, S. Ev. T. 25 Cumana . 1820
ulmifolia 1 Yel. . 6, S. Ev. T. 40 Jamaica 1739

GUELDER-ROSE. See *Viburnum Öpulus*.

GUEPÑIA. See *Teesdalia*.

GUERNSEY-LILY. See *Nerine sarniensis*.

GUETTARDA, *Ventenant*. In honour of Etienne Guettard, a French botanist. *Linn.* 21, Or. 6, Nat. Or. *Cinchonáceæ*. Splendid trees, attaining from upwards of twenty feet high; they succeed best in peat and loam mixed; and cuttings strike in sand without any difficulty. *Synonymes*: 1, *Laugeria hirsuta*; 2, *L. bicida*; 3, *L. odorata*; 4, *Mathiola scabra*. See *Isertia*.

GUEVINA. See *Quadría*.

GUEVO UPAS. A valley in Java, of a fearfully poisonous character, which deleterious nature has been attributed, without sufficient authority, to the injurious influence of the *Antiaris toxicaria*.

GUICHENÓTIA, *Gay*. In honour of Anthony Guichenot, who sailed round the world. *Linn.*

5, Or. 1, Nat. Or. *Bythneriaceæ*. This is a very pretty shrub; for culture, &c., refer to *Corethrostylis*.

macrantha . Pa. pur . 3, G. Ev. S. 3 Swan R. 1847

GUILANDINA, *Jussieu*. In honour of Melchior Guilandina, of Prussia, a great traveller, and a professor of botany at Padua, who died in 1589. *Linn.* 10, Or. 1, Nat. Or. *Fabáceæ*. These are pretty stove shrubs, of easy culture in sandy peat, mixed with a little loam; and young plants are obtained either by cuttings or by seeds, without difficulty. The native practitioners of India suppose the kernels of *G. Bonducella* to possess powerful tonic virtues.

Bonduc . . . Yellow . 6, S. Ev. S. 10 India . . 1640

GUILBÔGUI. See *Lardizábala biternata*.

GUIMAÛVE. See *Aithæa officinalis*.

GUINEA-HEN WEED. See *Petivéria alliaacea*.

GUINEA-PEACH. See *Sarcocéphalus*.

GUINEA-PLUM. See *Parinariüm excelsum*.

GUIZÓTIA, *De Candolle*. In honour of M. Guizot, the great French minister. *Linn.* 19, Or. 2, Nat. Or. *Asteráceæ*. See *Verbesina*.

GULDENSTÄDTIA, *Fischer*. In honour of J. A. Guldenstedt, a Russian naturalist. *Linn.* 17, Or. 4, Nat. Or. *Fabáceæ*. A dwarf plant, of little beauty, and very simple culture. *Synonyme*: 1, *Astrágalus pauciflorus*.
pauciflora 1 . Red . . 7, H. Her. P. † Siberia . 1827

GUM-AMMONIAC. See *Heracleum*.

GUM-ANIMI is obtained from the roots of *Hymenæa Covrbaril*.

GUM-ARABIC TREE. See *Acácia arabica*.

GUM-BUTEA is yielded by *Butea frondosa* and *supërba*.

GUM-CISTUS. See *Cistus Ladaniiferus*.

GUM-DOCTORS is produced by *Rhús metopium*.

GUM-DRAGON is the produce of *Pterocarpus Draco* and *Santalinum*.

GUM-ELEMI is procured from a species of *Iceia*.

GUM-GUTTA is the produce of *Vismea guianensis*.

GUM-HOG. See *Rhús*.

GUM-KINO. See *Coccoloba uvifera*, *Pterocarpus erinaceus*, and *Eucalyptus resinifera*.

GUM-LAC is obtained from *Erythrina monosperma*.

GUMMIFEROUS, producing gum.

GUM-SANDARACH is produced by *Thüja quadrivalvis*.

GUM-SENEGAL. See *Acácia verek* and *Adansonia*.

GUM-SUCCORY. See *Chondrilla*.

GUM-TRAGACANTH. See *Astrágalus verus*.

GUM-TREE. See *Eucalyptus robusta*.

GUNDELLA, *Tournefort*. From Andrew Gundelscheimer, a German botanist, and first discoverer of the plant. *Linn.* 19, Or. 5, Nat. Or. *Asteráceæ*. A curious plant, though possessed of no great beauty; it does best in sandy peat, and is readily increased by divisions.

Tournefortii Lgt. grn. 7, H. Her. P. 1‡ Levant . 1739

GÜNNERA, *Linn.* In honour of E. Gunner, bishop of Drontheim, a good botanist. *Linn.*

2, Or. 1, Nat. Or. *Arabiæææ*. A curious Cape genus, growing best in rich mould kept moist; it is increased by divisions.

perpènsa . Purple . 7, G. Her. P. 1½ C. G. H. 1688
scabra . Purple . 7, G. Her. P. 1½ C. G. H.

GUNNIA, *Lindley*. In compliment to Ronald Gunn, Esq., a zealous investigator of the botany of Van Diemen's Land. *Linn.* 20, Or. 1, Nat. Or. *Orchidæææ*. This is a curious genus, with dingy purple flowers, succeeding well with the treatment recommended for *Burvingtonia*.

linearis . Purple . 6, S. Epi. ½ N. Hol. . 1836
picta . Purple . 6, S. Epi. ½ Sydney . 1837

GUSTAVIA. Linnæus dedicated this genus to his patrôn Gustavus III. of Sweden, who presented a large collection of Indian plants to him. *Linn.* 16, Or. 8, Nat. Or. *Myrtiæææ*. *G. augusta* is a truly splendid plant, growing upwards of ten feet high; all the species thrive well in rich soil, and increase from cuttings in sand, in heat, under a glass.

augusta . White . 5, S. Ev. T. 10 Guiana . 1794

GUTTIFERÆ. See *Clusiæææ*.

GUZMÁNIA, *Ruiz* and *Pavon*. In honour of A. Guzman, a naturalist. *Linn.* 6, Or. 1, Nat. Or. *Bromeliæææ*. This is a pretty species, and will do well in any rich mould; it is increased by suckers.

tricolor . Grn. sca. 4, S. Her. P. 1 S. Amer. . 1820

GYMNAËNIA, *R. Brown*. From *gymnos*, naked, and *aden*, a gland; in allusion to the gland of the pollen masses. *Linn.* 20, Or. 1, Nat. Or. *Orchidæææ*. The plants of this genus do best in sandy loam and peat, and if grown in pots, they must be well drained, and very little water given to them when not in a growing state; they are increased by divisions of the roots. *Synonymes*: 1, *Orchis angustifolia*, *ibérica*; 2, *Orchis conopsea*; 3, *Habenaria tridentata*; 4, *Satgrium viride*. See *Peristylis*.

angustifolia 1 White . 6, H. Ter. ½ Caucasus 1819

viridis 4 . Green . 6, H. Ter. ½ Eng., mead.

GYMNEMA, *R. Brown*. From *gymnos*, naked, and *nema*, a thread; in reference to the stamens. *Linn.* 5, Or. 2, Nat. Or. *Asclepiadæææ*. Interesting stove twiners, easily cultivated in loam and peat; cuttings take in sand, in heat, under a glass. The milky juice yielded by *G. lactiferum* is used by the Cingalese for food, who also use the leaves when boiled. Indigo of excellent quality is obtained from *G. tingens*. *Synonymes*: 1, *Asclepias tenacissima*; 2, *A. tingens*.

lactiferum . Yel. . 6, S. Ev. Tw. 6 Ceylon . 1824
sylvestre . Green . 6, S. Ev. Tw. 8 Ceylon . 1816

GYMNOËRUPUS. See *Paronæchia*.

GYMNOËIDIUM. The swelling occasionally found at the base of the spore case of *Urn Mosses*.

GYMNOCLADUS, *Lamarck*. From *gymnos*, naked, and *klados*, a branch; appearance of the branches. *Linn.* 22, Or. 9, Nat. Or. *Fabæææ*. A very handsome hardy tree, growing well in open loamy soil, and propagated by cuttings of the roots.

canadensis . White . 5, H. De. T. 20 Canada . 1748

GYMNODISCUS, *De Candolle*. From *gymnos*, naked, and *discus*, a disk. *Linn.* 19, Or. 4, Nat. Or. *Asteræææ*. Grows in any common soil.

capillaris . Yellow . 6, H. A. 1½ C. G. H. 1822

GYMNOGENS. A large class of trees and shrubs, including firs, yews, and other similarly constituted plants.

GYMNOGRAMMA, *Desfontaines*. From *gymnos*, naked, and *gramma*, writing; alluding to the naked sori. *Linn.* 24, Or. 1, Nat. Or. *Polypodiæææ*. The species of this genus are among the most interesting of the fern tribe, and not difficult of cultivation, growing well in a mixture of loam and peat; and young plants are obtained by divisions of the roots. *Synonymes*: 1, *Acróstichum calomélanos*; 2, *A. chrysophylla*; 3, *A. leptophylla*; 4, *Hemionitis pedata*; 5, *H. rufa*; 6, *H. tartarea*; 7, *Acróstichum trifoliata*.

GYMNOSPÉRMA, *De Candolle*. See *Sellida*.

GYMNOSPHERA, *Blume*. From *gymnos*, naked, and *sphaira*, a globe. *Linn.* 24, Or. 1, Nat. Or. *Polypodiaceæ*. Stove fern.
squamulata. Brn. yel. 4, S. Her. P. 1 ½ Malacca .

GYMNOSPORANGIUM, *De Candolle*. From *gymnos*, naked, and *sporangium*, a seed-vessel. *Linn.* 24, Or. 9, Nat. Or. *Uredinaceæ*. Found on the *Juniperus communis*. See *Anictangium* and *Schistostega*—*juniperi*.

GYMNOSTÁCHYS, *R. Brown*. From *gymnos*, naked, and *stachys*, a spike. *Linn.* 4, Or. 1, Nat. Or. *Orontiacæ*. This is a pretty plant, of easy culture in peat and loam, and is increased by suckers.
anceps . White . 6, G. Her. P. 1 N. Hol. . 1820

GYMNOSTÁCHYUM, *Nees*. The same as *Gymnostachys*. *Linn.* 2, Or. 1, Nat. Or. *Acanthaceæ*. A genus nearly related to *Eranthemum*, and requiring the same treatment.
zeylanicum . Yellow . 11, S. Ev. T. 2 Ceylon . 1852

GYMNÓSTOMUM, *Hedwig*. From *gymnos*, naked, and *stoma*, a mouth; alluding to the open orifice of the theca. *Linn.* 24, Or. 4, Nat. Or. *Bryaceæ*. A numerous genus of plants, growing in tufts and patches of various colours, found at every season, and in almost every situation. *Synonymes*; 1, *tutoolum*; 2, *stelligerum*; 3, *obtusum*; 4, *æruginosum*; 5, *pau-cifolium*; 6, *intermedium*; 7, *Grimmia Forstèri*—*æstivum* 1, *caespitosum*, *conicum*, *curvirostrum* 2, *Donianum*, *fasciculare*, *Griffithianum*, *Heimii* 3, *lapponicum*, *microstomum*, *minutulum*, *ovatum*, *gracile*, *vulgare*, *pyriforme*, *rupèstre* 4, *ténue* 5, *tortile*, *truncatum* 6, *viridissimum* 7, *Wilsoni*.

GYMNÓSTYLIS. See *Soliva*.

GYNANDRÓPSIS, *De Candolle*. From *gyne*, a female, *aner*, *andros*, a male, and *opsis*, resemblance; the stamens appear as if inserted on the top of the ovary. *Linn.* 15, Nat. Or. *Capparidaceæ*. These are very pretty plants; for culture, &c., see *Cledome*. *Synonymes*; 1, *Cledome candelabrum*; 2, *C. pentaphylla*; 3, *triphylla*; 4, *speciosa*; 5, *triphylla*.

candelabrum Red . 7, H. A. 1 S. Amer. 1824

triphylla 5 . White . 7, H. A. 1 W. Ind. 1816

GYNANDROUS, having the stamens and style combined in one body.

GYNÉRIUM, *H. and B.* From *gyne*, a female, and *erion*, wool. *Linn.* 22, Or. 2, Nat. Or. *Graminaceæ*. This is called the pampas grass, in consequence of its inhabiting the vast plains of South America. It is very ornamental in the flower garden, growing in favourable situations to the height of six feet.

argenteum . Yel. wht. 7, H. Grass 6 S. Amer.
roseum . Pa. rose . 7, H. Grass 6 S. Amer.

GYNOBASE, a fleshy receptacle, bearing separate fruits.

GYNOBASIC, having a gynobase.

GYNOFHORE, a lengthened receptacle, bearing the petals, stamens, and pistils, but not the calyx.

GYNOPLÉURA. See *Malesherbia*.

GYNOPOGON. See *Aljiza Gynopogon*.

GYNOSTEMIUM. The column of Orchids.

GYNOUS; flowers are said to be 3, 4, 5, &c., gynous, when they contain so many styles.

GYNOXIS, *Dec.* From *gyne*, a female, and *oxys*, sharp; achenia. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. A pretty climbing plant, with tuberous roots, and fragrant yellowish flowers; it is of easy culture, and may be increased by cuttings.
fragens . Yellow . 6, G. P. Cl. 3 Guatem. 1840

GYNŪRA. See *Senecio* and *Caecilia*.

GYPSOCÁLLIS, *Sal.* The moor heath. Derived from *gypsos*, lime, and *kallos*, beauty. The plants grow on limestone commons. For species and culture, see *Erica*.

GYPSÓPHILA, *Linn.* From *gypsos*, chalk, and *phileo*, to love; in reference to the favourite habitat of the plants. *Linn.* 10, Or. 2, Nat. Or. *Caryophyllaceæ*. The plants of this genus do not possess much beauty; they are all easily cultivated in any open soil, and the herbaceous kinds are increased by cuttings. The annuals need only be sown in the open border.
Synonymes: 1, *scorzonerifolia*. See *Tinnica*.

GYRÈNIA, *Knowles* and *Westcott*. From *gyros*, a circle. *Linn.* 6, Or. 1, Nat. Or. *Asphodelaceæ*.
biflora . Greenish . 9, F. Bl. P. 2 Mexico . 1837

GYROCÀRPUS, *Jacquin*. From *gyro*, to turn round, and *karpos*, a fruit; in allusion to the fruit moving in the air. *Linn.* 23, Or. 1, Nat. Or. *Combretaceæ*. These plants are very ornamental, and of easy cultivation in loam and peat. Cuttings strike readily in sand, in heat, under a glass. *Synonymes*: 1, *G. Jacquini*; 2, *Jacquini*.

americanus 1 Yellow . 5, S. Ev. T. 20 W. Ind. 1816
asiaticus 2 . Yellow . 5, S. Ev. T. 20 E. Ind. 1812

GYRÒMIA. See *Meddola*.

GYRÓPHORA, *Acharius*. From *gyros*, a circle, and *phoreo*, to bear; alluding to the disk of the shield. *Linn.* 24, Or. 8, Nat. Or. *Parmeliaceæ*. Very interesting plants of the lichen tribe, found growing chiefly upon exposed rocks, or granite stones; some of the species are peculiar to the Highlands of Scotland—*cylindrica*, *densata*, *erosa*, *glabra*, *polyphyllo*, *murina*, *pellita*, *proboscidea*, *arctica*, *pustulata*.

GYROSE, turned round like a crook.

GYROSTÈMON, *Desfontaines*. From *gyros*, a circle, and *stemon*, a stamen; in reference to the concentric arrangement of the stamens. *Linn.* 22, Or. 12, Nat. Or. *Euphorbiaceæ*. The species of this genus are ornamental trees, thriving well in loam and peat; and are increased by cuttings planted in sand. *Synonyme*: 1, *Codonocarpus australis*.

attenuatus . White . 5, G. Ev. T. 25 Moreton B. 1830
ramulosus . White . 5, G. Ev. S. 10 Australia . 1820

GYROSUS, bent backwards and forwards like the anthers of *Cucurbitis*.

GYROTHÈCA, *Sweet*. From *gyros*, a circle, and *theca*, a spore-case; resemblance in flowers. *Linn.* 3, Or. 1, Nat. Or. *Hæmodoraceæ*. See *Lachnanthes*.

GYRUS, the articulated circle which surrounds the spore-cases of ferns.

H.

HABASIA, *Blume*. See *Dehasia*.

HABENÀRIA, *Willdenow*. From *habena*, a rein, or thong; in allusion to the long strap-shaped spur. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. This is a genus of interesting plants, well deserving of a place in every collection. The hardy kinds will grow well in the open border, with a slight protection for the American species in severe, frosty, or rainy weather. The stove species grow best in a mixture of leaf-mould and peat, placed in a hot, damp part of the house when in a growing state; but like the genus *Blètia*, after the plants have lost their leaves, and the roots become dormant, they require to be kept cool and dry until the roots begin to push, when the plants should be repotted, and again placed in a hot and moist heat. They are all increased by divisions of the roots. *Synonymes*: 1, *Orchis foliodes*; 2, *virescens*; 3, *O. spectabilis*; 4, *O. incisa*; 5, *O. psychodes*; 6, *O. procera*; 7, *O. gigantea*. See *Hermínium*, *Peristylis* and *Platanthera*.

HABIT, features, or general appearance of a plant.

HÀBITA, habitation, locality, native country.

HÀBLITZIA, *Bieberstein*. In honour of C. Von Hablitz, a traveller, and author of *Travels in the Crimea*. *Linn.* 5, Or. 1, Nat. Or. *Amarantaceæ*. We can give no particulars of this plant; indeed, it is possible that it may be lost to the country. Increase is by cuttings, or seeds.

tamnoides . White 8, H. De. Cl. 6 Caucasus . 1828

HÀBRÀNTHUS, *Herbert*. From *habros*, delicate, and *anthos*, a flower. *Linn.* 6, Or. 1, Nat. Or. *Amaryllidaceæ*. All the species of this genus are pretty when in flower. A mixture of three parts sandy loam, and one part peat, suits the various species of this genus. They may be increased by offsets from the roots, or by seeds, which are frequently produced in abundance. *Synonymes*: 1, *Amaryllis advena*; 2, *A. intermedia*; 3, *A. pratensis*.

HABROTHÁMNUS, Endl. From *habros*, gay, and *thamnos*, a shoot or branch; in allusion to the beauty of the species. *Linn.* 5, Or. 1, Nat. Or. *Solanaceæ*. Elegant greenhouse plants, bearing panicles of flowers in profusion. They are now in many collections, and their great beauty entitles them to a first rank in all. *Synonymes*: 1, *Meyenia corymbosa*, *Cestrum Endlicheri*; 2, *C. elegans*, *M. elegans*, *H. purpureus*; 3, *C. fasciculatum*; 4, *C. roseum*. See *Isochroma*.

HÆMÁNTHUS, Linn. From *haima*, blood, and *anthos*, a flower; colour of some of the flowers. *Linn.* 6, Or. 1, Nat. Or. *Amaryllidaceæ*. A genus of fine bulbous plants; all the species succeed well in sandy loam, mixed with a little peat. They do not require to be watered when in a dormant state, in consequence of which, the bulbs ripen, and afterwards flower freely; increased by offsets. See *Brunsvigia*.

HÆMÀRIA, Lindley. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. For culture, see *Goodyera*.

discolor . . . Red . 4, S. Epi. 1
 Brazil . . 1815 |

HÆMATOCÓCCUS, Agardh. From *haima*, blood, and *kokkos*, a grain; in allusion to the colour of many species. *Linn.* 24, Or. 7, Nat. Or. *Confervaceæ*. Found on irrigated cliffs, caverns, &c.—*fruticulosus*, *sanguineus*.

HÆMATÓDES, blood-coloured.

HÆMATÓXYLON, Linn. From *haima*, blood, and *xylon*, wood; logwood is well known for its red colour. *Linn.* 10, Or. 1, Nat. Or. *Fabaceæ*. The logwood tree attains the height of twenty feet; it grows well in a mixture of loam, peat, and a little sand, and it may be increased by cuttings in sand, in heat, under a glass, or by seeds, which are very frequently received in this country from the West Indies. The bark and the wood are slightly astringent. The wood is chiefly used in dyeing.

campechianum Yellow . 5, S. Ev. T. 20
 S. Amer. 1724 |

HÆMATÓXYLON OR RED WOOD. See *Gordonia Hæmatóxylon*.

HÆMÓCHARIS, Mart. See *Laplacæa*.

HÆMODORACEÆ OR BLOOD-WORTS. An order of herbaceous and tree-like lilies nearly related to *Amaryllids*; the *Vellozias* form trunks ten feet or more high, and as thick as a man's body, after the manner of *Dracenas*.

HÆMODÓRUM, Smith. From *haima*, blood, and *doron*, a gift; colour of the flowers; *Linn.* 3, Or. 2, Nat. Or. *Hæmodoraceæ*. Ornamental plants, growing freely in loam and peat; they are readily increased by division of the roots.

planifolium . .	Orange 8, G. Her. P. 1	N. S. W. . 1810

HAGBERRY. See *Prunus vulgaris*.

HAIR FLAG. See *Plocamium*.

HAIR GRASS. See *Aira*.

HAI-TSAI. See *Plocaria tenax*.

HÀKEA, Schrader. In honour of Baron Hake, a German promoter of botany. *Linn.* 4, Or. 1, Nat. Or. *Proteaceæ*. A genus of very desirable New Holland plants; they require to be grown in a soil composed of equal parts of loam, peat, and sand. It is necessary to drain the pots well, so that the plants are not injured by too much water. Cuttings of the ripened wood root without difficulty in sand, under a glass. *Synonyme*: 1, *H. Victoria*.

HALBERD-WEED. See *Neurotæna*.

HALEDSCHE or HILLELIC. See *Balanites ægyptiaca*.

HALENIA, *G. Don.* *Linn.* 5, Or. 2, Nat. Or. *Gentianaceæ*. See *Suertia*.

HALESIA, *Linn.* In honour of S. Hales, D.D., F.R.S., a vegetable physiologist. *Linn.* 11, Or. 1, Nat. Or. *Ebenaceæ*. All the species of the Snowdrop tree are most beautiful and valuable shrubs, on account of their flowering so early in the season; they grow freely in any common garden soil, and multiply by cuttings of the roots, or by layers.

diptera . . . White . 4, H. De. S. 6 N. Amer. . 1758
parviflora . . . White . 5, H. De. S. 8 N. Amer. . 1802
tetraptera . . . White . 5, H. De. S. 8 Carolina . 1756

HALICÁCABA or RED NIGHTSHADE. See *Erica Halicácaba*.

HALICÁCABUM or WINTER CHERRY. See *Cardiospermum Halicácabum*.

HALIMÓCNEMIS, *Led.* From *halimos*, maritime, and *nemos*, a grove; situation where the plants grow. *Linn.* 3, Or. 3, Nat. Or. *Chenopodiaceæ*. Hardy annuals, of no beauty, growing in common light soil.—*crassifolia*, *oppositifolia*, *sclerosperma*, *sibirica*, *vibroz*.

HALIMODÉNDRON, *Fischer.* From *halimos*, maritime, and *dendron*, a tree; in allusion to the shrubs growing in dry, naked, salt fields, by the river Irctis, in Siberia. *Linn.* 17, Or. 4, Nat. Or. *Fabaceæ*. These are very beautiful shrubs,

well worthy of a place in every garden; for culture and propagation, see *Caragana*. *Synonymes*: 1, *Robinia Halimodendron*, *Caragana argentea*; 2, *Robinia triflora*.

argenteum 1 . . . Pink . 5, H. De. S. 6 Siberia . 1779
brachysema . . . Pink . 6, H. De. S. 6 Siberia .
subviridescens 2 Pink . 5, H. De. S. 6 Siberia .

HÁLIMUS. See *Atriplex Hálimus*.

HALIPHILÆOS. See *Quercus Cérris crinita*.

HALISERIS, *Agardh.* From *hals*, the sea, and *seris*, lettuce; in reference to the membranous fronds. *Linn.* 24, Or. 7, Nat. Or. *Fucaceæ*. A species, with some likeness of a Polypodium; it is olive-green, and found in the ocean at all seasons of the year—*polypodioides*.

HALLERIA, *Linn.* In honour of Albert Haller, M.D., a distinguished botanical author. *Linn.* 14, Or. 2, Nat. Or. *Scrophulariaceæ*. A genus of ornamental shrubs, requiring to be grown in a light rich soil; cuttings root readily in sand, or soil, under a glass. They require an airy part of the greenhouse, and plenty of water in summer.

elliptica . . . Scarlet 7, G. Ev. S. 6 C. G. H. . 1816
lucida . . . Scarlet 7, G. Ev. S. 6 C. G. H. . 1752

HÁLLIA, *Thunberg.* In compliment to Berger Martin Hall, a pupil of Linnaeus. *Linn.* 16, Or. 6, Nat. Or. *Fabaceæ*. Herbaceous plants, with little to recommend them to the cultivator; they thrive best in sandy loam and peat, and cuttings of the young wood root freely in sand, under a glass. They sometimes ripen seed, from which plants may also be obtained. See *Eleiditis* and *Heylandia*.

imbricata . . . Pink . 8, G. Ev. S. 1½ C. G. H. . 1812
alata, *angustifolia*, *asarina*, *cordata*, *flaccida*.

HALM or MAT-GRASS. See *Elymus arenarius* and *Carex arenaria*.

HALOCNÉMUM. From *hals*, the sea, and *nemos*, a grove; situation where the plants grow. *Linn.* 1, Or. 2, Nat. Or. *Chenopodiaceæ*. A hardy annual, of no beauty.—*caspicum*.

HALORAGACEÆ or HIPPURIDS. Herbaceous plants and small shrubs, often inhabiting wet places, ditches, and slow streams. They possess no beauty and are therefore seldom cultivated.

HALORAGIS, *Forster.* From *hals*, the sea, and *rhaæ*, berry of grapes. *Linn.* 8, Or. 4, Nat. Or. *Haloragaceæ*. These are rather curious plants, thriving well in a mixture of loam and peat, and increased readily by cuttings in sand, under a glass.

Cercodia . . . Grn. red 6, G. Ev. S. 1¼ N. Zeal. . 1772
digyna . . . Green . 4, G. Ev. S. 1¼ Australia. 1826
prostrata . . . Grn. red 7, G. Ev. S. ¼ N. Zeal. . 1820

HALYMÉNIA, *Agardh.* From *hals*, the sea, and *hymen*, a membrane; alluding to the membranous fronds. *Linn.* 24, Or. 7, Nat. Or. *Ceramiceæ*. Interesting marine plants, with flat membranous fronds. *H. edulis* is the true, and *H. palmata* the common Dulse, both of which are eaten in Scotland—*edulis*, *e. media*, *furcellata*, *ligulata*, *Opuntia*, *palmata*, *p. marginifera*, *purpurascens*, *p. crispata*, *sarniënsis*.

HALYSERIS. See *Haliseris*.

HAMAMELIDACEÆ or WITCH-HAZELS. An order

of small trees and shrubs. Their flowers are small and inconspicuous, but several kinds form neat growing shrubs, and are therefore worthy of being cultivated.

HAMAMELIS, *Linn.* From *hama*, with, and *melon*, an apple; the fruit accompanies the flower. *Linn.* 4, Or. 2, Nat. Or. *Hamamelidaceæ*. The species of Witch-hazel are ornamental trees, producing a fruit something like a nut. They succeed in any common soil, and are commonly increased by layers.

macrophylla . . . Yel. . 5, H. De. T. 15 N. Amer. 1812
virginica . . . Yel. . 5, H. De. T. 12 N. Amer. 1812

HAMATUS. Hooks, hairs, or small spines which are hooked at the point.

HAMBURGH PARSLEY. See *Apium*.

HAMÉLIA. Named by Jacquin, in honour of the distinguished botanist H. L. Du Hamel Du Monceau, who died in 1782. *Linn.* 5, Or. 1, Nat. Or. *Cinchonaceæ*. This genus consists of handsome, free-flowering shrubs, easily cultivated in peat and loam; and cuttings, planted in the same kind of soil, root readily in a moist heat, under a glass. *Synonyme*: 1, *H. odorata*.

axillaris . . . Yel. . 8, S. Ev. S. 2 W. Indies . . . 1822

HAMILTONIA, *Roxburgh*. In honour of Mr. Hamilton, of Woodlands, near Philadelphia, an eminent botanist, and the first to erect a conservatory in North America, for the preservation of plants of hot climates. *Linn.* 22, Or. 3, Nat. Or. *Cinchonaceæ*. These plants are very desirable on account of their producing flowers very freely, which are delightfully fragrant; loam and peat suits them best, and cuttings root readily in sand, under a glass, in a moist heat. *Synonymes*: 1, *Spermatocytum azureum*; 2, *S. suaveolens*; 3, *Pyrrularia pubera*. See *Comandra*.

oleifera 3 . . . Gr. yel. 1, F. De. S. 6 N. Amer. . . 1800
scabra 1 . . . Pa. blue 1, S. Ev. S. 6 Nepal . . . 1823
suaveolens 2 . . . White 10, S. Ev. S. 6 E. Indies . . . 1818

HAMOSUS, hooked, bent.

HANCHINOL. See *Heimia salicifolia*.

HAND PLANT. See *Cherostemon platanoides*.

HAPALOSTEPHIUM, *Don.* From *hapalos*, soft, and *stephos*, a crown; alluding to the hairy receptacle. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. The plants included in this genus are well adapted for rockwork, or the front of flower-borders; they grow freely in any light rich soil, and increase by dividing the roots, or by seeds. *Synonymes*: 1, *Crèpis austriaca*; 2, *Hieracium grandiflorum*; 3, *lyratum*; 4, *paludosum*; 5, *blattarioides*, *Lepicavine multicaulis*; 6, *Hieracium pyrenaicum*; 7, *sibiricum*, *Crèpis sibirica*; 8, *Lepicavine spinulosa*.

HARDENBÉRGIA, *Bentham*. Named after the Countess of Hardenberg, sister to Baron Hugel, and in whose garden the plants collected by her brother, in his travels, were carefully nursed until his return. *Linn.* 17, Or. 5, Nat. Or. *Fabaceæ*. Pretty trailing greenhouse plants, suitable for training up a rafter or to a trellis. When grown in pots and suitably trained, they are very pretty objects in spring. A mixture of loam, peat, and sand suits them; and cuttings, planted in pots of sand, strike root readily. *Synonymes*: 1, *Keenèda cordata*; 2, *K. Comptoniana*; 3, *K. macrophylla*; 4, *K. monophylla*; 5, *K. ovata*, *latifolia*; 6, *K. monophylla*.

HARTWICH. See *Tordylium*.
HASCHISCH or BANGHE is an intoxicating drug made in Turkey from the dried leaves of hemp.
HASHISH. See *Haschisch*.
HASSAGY-TREE. See *Curtisia*.
HASSELQUISTIA. Named by Linnaeus, in honour of his pupil Frederick Hasselquist, M.D., who travelled in the Holy Land, &c., and died at Smyrna, in 1752. *Linn.* 5, Or. 2, Nat. Or. *Apiaceae*. Mere annual weeds, natives of Egypt; they grow in any common soil--*egyptiaca, cordata*.
HASTATE, formed like the head of a halbert.
HASTATELY-LANCEOLATE, between halbert-shaped and lance-shaped.
HASTATELY-SAGITTATE, between halbert-shaped and arrow-shaped.
HATCHET-VETCH. See *Biserrula*.
HAULM, dead stems of herbs.
HAUTBOY. See *Fragaria*.
HAVETIA, Kunth. In honour of M. Havet, a French botanical collector in Madagascar. *Linn.* 22, Or. 5, Nat. Or. *Clusiaceae*. This plant grows well in a mixture of light loam and heath mould, and ripened cuttings root in sand, under a glass. *Synonyme*: 1, *Clusia tetrandra*.
laurifolia White . . . S. Ev. S. S. Amer. . . 1820
HAWKWEED. See *Hieracium*.
HAWORTHIA. Prince Salm-Dyck named this genus in compliment to A. H. Haworth, F.L.S., a distinguished English botanist. *Linn.* 6, Or. 1, Nat. Or. *Liliaceae*. Haworthia is a singular and highly interesting genus of succulent

plants, nearly related to the genera *Aloe* and *Gasteria*, and they require the same treatment as those genera. *Synonymes*: 1, *Aloe atrovirens*; 2, *A. margaritifera minima*; 3, *Haworthia concava*; 4, *rigida*; 5, *Aloe margaritifera*; 6, *Haworthia fasciata*; 7, *Aloe rigida*; 8, *A. venosa*; 9, *A. viscosa*.

HEATHWORTS. See *Ericaceæ*.

HEAVENLY FRUIT. See *Diospyros*.

HEBECLÁDUS, Miers. From *hebe*, down, and *klados*, a slender stem, in allusion to the character of some of the species. *Linn.* 5, Or. 1, Nat. Or. *Solanaceæ*. A native of South America; requires the shelter of a greenhouse; grows freely in light soil, and is easily propagated by cuttings, planted in sand. *Synonyme*: 1, *Atropa biflora*.

biflorus . Pur. yel. . 8, G. Ev. S. 2 N. Grenada 1844

HEBECLÍNÍUM, De Candolle. From *hebe*, down, and *klíne*, a bed. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. See *Eupatorium*.

HEBENSTREÍTA, Linn. In honour of J. E. Hebenstreit, M. D., professor of botany at Leipsic. *Linn.* 14, Or. 2, Nat. Or. *Selaginaceæ*. This is a genus of pretty under-shrubs, with very neat foliage and modest flowers; they thrive best in a mixture of sandy loam and peat, and young plants are readily obtained from cuttings in the same kind of soil, under a glass. *Synonyme*: 1, *H. aivrea*.

thymoides . Red 7, H. A. $\frac{1}{2}$	France	1699

HÉDERA, Swartz. The name appears to be derived from *hedra*, a Celtic word, signifying a cord, and the English name, Ivy, is derived from *iw*, a word in the same language, signifying green, from its being always green. *Linn.* 5, Or. 1, Nat. Or. *Araliaceæ*. The common Ivy is very often employed for covering naked buildings, or trees, which latter it invariably kills; it is increased by slips taken off, and planted where they are to grow. The tender kinds will grow in any soil, though they appear to grow better in a very light one. See *Arália*.

HEDÝCHÍUM, König. From *hedys*, sweet, and *chion*, snow; alluding to the sweet-scented snow-white flowers of some of the species.

Linn. 1, Or. 1, Nat. Or. *Zingiberaceæ*. The species of *Hedýchium*, or Garland Flower, are all highly-prized flowering plants, more particularly *H. angustifolium* and *H. coronarium*; they are all well worthy of extensive cultivation, and will grow freely in rich light soil, but to flower them well, they require large pots, and a plentiful supply of water when in a growing state; they are readily increased by dividing the roots. *Synonymes*: 1, *angustifolium*; 2, *angustifolium*.

HEDYOTIS, *Linn.* From *hedys*, sweet, and *ous*, an ear; alluding to the sweet-scented ear-like leaves. *Linn.* 4, Or. 1, Nat. Or. *Cinchonaceæ*. Stove annuals, of neither interest nor value; they are readily grown in peat and loam. *Synonymes*: 1, *Spermacoce biflora*; 2, *Oldenlandia diffusa*; 3, *O. ramosissima*—biflora 1, cymosa, diffusa 2, herbacea, lactea, ramosissima 3, umbellata. See *Lipostoma*.

HEDYNOIS, *Tournefort*. From *hedys*, sweet, and *pnos*, to breathe; in reference to its having the power of scenting the breath. *Linn.* 19, Or. 1, Nat. Or. *Asteraceæ*. Hardy annuals, of no interest; the species need only be sown in the open ground—*coronopifolia*, *cretica*, *mauritanica*, *monspeliensis*, *pendula*, *rhaquadoloides*, *tuberosis*.

HEDYSARUM, *Linn.* From *hedysaron*, the name of a papilionaceous plant described by Theophrastus. *Linn.* 17, Or. 4, Nat. Or. *Fabaceæ*. Almost all the species of this genus are very handsome flowering plants, producing racemes of very beautiful pea flowers, particularly adapted for flower-borders, or rock-work. They grow freely in a light rich soil, or loam and peat, and the herbaceous kinds are increased by dividing the roots in spring, or by seeds. The seeds of the annual and biennial kinds only require sowing in the open border in spring. *Synonymes*: 1, *H. sibiricum*; 2, *H. alpinum*; 3, *H. obscurum altaicum*; 4, *H. humile*. See *Adesmia*, *Alhagi*, *Alysicarpus*, *Desmodium*, *Dicentra*, *Eleiobis*, *Flemingia*, *Galactia*, *Lespedeza*, *Lourea*, *Nicholsonia*, *Onobrychis*, *Ornocarpum*, *Pueraria*, *Stylosanthus*, *Taverniera*, *Uraria* and *Zornia*.

HEENG. See *Narthex assafetida*.

HEIMIA, *Link.* In honour of Dr. Heim, a celebrated Berlin physician. *Linn.* 11, Or. 1, Nat. Or. *Lythraceæ*. These plants are very pretty when in blossom; they grow well in an equal mixture of loam and peat, with a little sand. They only require to be protected from frost in winter, which may easily be done if the plants are against a south wall; if in pots, they should be removed into the greenhouse. Cuttings strike freely either in sand or soil, under a glass. *Synonyme*: 1, *Nesaea salicifolia*.

linariifolia.	Yellow	. 6, F. Ev. S. 4 S. Amer.	. 1829
myrtifolia.	Yellow	. 8, F. Ev. S. 5 S. Amer.	. 1826

HEINSIA, *De Candolle*. In compliment to the philologist Heinsius. *Linn.* 5, Or. 1, Nat. Or. *Cinchonaceæ*. A stove shrub, in some respects resembling the *Gardenia*; and will flourish with the same treatment as the stove species of that genus.

jasminiflora White . 3, S. Ev. S. 6 Sier. Leone 1824

HEINTZIA, *Karsten*. Most likely named after a botanist named Heintz. *Linn.* 14, Or. 2, Nat. Or. *Gesneriaceæ*. The only species of this genus yet introduced is a soft-wooded, strong-growing plant, and requires similar treatment to the shrubby species of *Gesneria*.

tigrina . . . Wht. rose 5, S. Ev. S. 4 Venezuela 1849

HEISTERIA. Named by Linnæus, in honour of Laurence Heister, once professor of botany at Helmstadt, who died in 1758. *Linn.* 10, Or. 1, Nat. Or. *Oleaceæ*. This is a tree which attains the height of about fifteen feet, and is cultivated in a mixture of loam, peat, and sand; and cuttings will root in sand, under a glass, in heat. The wood of this tree is the partridge-wood, or Bois Perdrix, of the cabinet-makers.

coccinea . Scarlet . 5, S. Ev. T. 15 W. Ind. . 1822

HÆLICIA, *Lindley*. From *helcium*, a word said to mean the collar of a horse; in reference to the appearance of one part of the flower opposed to the other when viewed front-wise. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. The relationship of this plant is evidently greatest to *Trichopilia*; it is, however, also closely associated with *Aspasia*, from which it differs in not having the lip united to the column, and in its deep-fringed anther-bed. All these are

stationed in a sub-division of *Vandææ*, to which Dr. Lindley proposed to give the name of *Brassidæ*. For culture, &c., see *Trichophyllia*. *sanguinolenta* Cr. br. wht. S. S. Epi. $\frac{1}{2}$ Guayaquil 1843

HELESTRUM. See *Aster*.

HELENA. See *Narcissus*.

HELENA. See *Helena* and *Narcissus*.

HELENIUM, Linn. Named after the celebrated Helen. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. Very pretty tallish-growing plants, well adapted for flower-borders; they will grow freely in any common garden soil. The herbaceous species may be increased by dividing the roots. The annuals and biennials require the same treatment as is generally given to such species. See *Eriophyllum, Monolopia*.

HELEOCHOLA, Host. Meaning unknown. *Linn.* 3, Or. 1, Nat. Or. *Graminaceæ*. Annual grasses—*alopecuroides, phalaroides, schenoides*. See *Crypsis*.

HELIANTHEMUM, Tournefort. From *helios*, sun, and *anthemon*, flower; in allusion to the yellow flowers. *Linn.* 13, Or. 1, Nat. Or. *Cisidææ*. This is a very showy, free-flowering genus of plants, comprising some of the prettiest little shrubs in cultivation, for ornamenting rock-work. In winter, some of the species require the protection of a frame or greenhouse, and on that account require to be grown in pots; they all thrive well in a mixture of sandy loam and peat. The shrubby kinds may be increased by cuttings, under a hand-glass, in a sheltered situation, or by seeds, by which the annual species are also to be raised. *Synonymes*: 1, *viscidulum*; 2, *roseum*; 3, *salicifolium*; 4, *sampsucifolium*; 5, *Cistus umbellatus*, *Cistus verticillatus*; 6, *Cistus umbellatus* var.

fol. var.	Varieg.	. 6, H. Tr.	S.	1	Gardens.	.

HELÍANTHUS, *Linn.* From *helios*, sun, and *anthos*, a flower; on account of the brilliant colour of the flowers, and from the erroneous idea that the flowers always turned towards the sun. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. The sun-flower is a highly ornamental and extensive genus of plants, and from their tall growth they are particularly adapted to the back of flower-borders or the front of shrub-beries, in which situation they make a splendid appearance in autumn; they grow well in any common garden soil, the tender kinds being protected in winter. They are all easily increased by seed, which is ripened in abundance; the annual kinds should be raised on a hotbed in spring, and when of sufficient size, transplanted into the open border, where they will grow and flower beautifully. *Synonymes*: 1, *H. procumbens*; 2, *asper*. See *Viguiera*.

HELICÔNIA, *Linn.* Derived from *Helicon*, the mountain of the Muses; from its affinity to the genus *Musa*. *Linn.* 5, Or. 2, Nat. Or. *Musaceæ*. A rich loamy soil mixed with sand is best adapted for these curious plants, and to flower them in perfection they require plenty of pot-room and a strong heat; young plants are easily obtained by division of the roots. *Synonymes*: 1, *buccinata*; 2, *psittacorum*. See *Phenacospium*.

HELICOSPORIUM, *Nees*. From *helicos*, twisted, and *spora*, a spore; in reference to the twisted sporules. *Linn.* 24, Or. 9, Nat. Or. *Botrytaceæ*. An extremely minute greenish species of fungi, found in autumn about the foot of trees—*ségetum*.

HELICTERES, *Linn.* Screw-trees. From *helix*, a screw; in reference to the carpels being twisted. *Linn.* 16, Or. 7, Nat. Or. *Sterculi-accæ*. A genus of free-flowering shrubs, not possessed of much beauty; they grow freely in a mixture of loam and peat, and cuttings taken off at a joint rot readily in sand, under a glass, in heat. See *Sterculia*.

HELIOCARPUS, *Linn.* From *helios*, the sun, and *karpos*, a fruit; the valves of the capsule are beautifully fringed, which gives them the appearance of a little sun. *Linn.* 11, Or. 1, Nat. Or. *Tiliaceæ*. An ornamental shrub, from fourteen to twenty feet high; it thrives in a mixture of sand, loam, and peat; and cuttings of the young wood will root in sand, under a glass, in a moderate heat.

americanus . Purple . S. Ev. S. 12 Vera Cruz 1733

HELIOPHILA, *Linn.* From *helios*, the sun, and *phileo*, to love; on account of the plants growing in places exposed to the sun. *Linn.* 15, Nat. Or. *Brassicæ*. A genus of pretty little plants, mostly annuals; they are well worthy of extensive cultivation, thriving well in sandy loam and peat; cuttings of the shrubby kinds strike readily in sand, under a glass, or they may be increased by seeds. The annuals should be sown early in spring, in pots, and placed in the greenhouse or a gentle hotbed; and in May they may be planted out in the open border. *Synonymes*: 1, *H. pidsa incisa*; 2, *Cleome capensis*, *Cheiranthus strictus*; 3, *Peltaria capensis*; 4, *Heliophila pinnata*; 5, *H. integrifolia*; 6, *H. pinnata*.

HELIOPSIS, *Persoon.* From *helios*, the sun, and *opsis*, appearance; alluding to the brilliant colour of the flowers. *Linn.* 19, Or. 2, Nat. Or. *Asteræ*. These are tall-growing plants, well suited for the back of flower-borders, where they flower beautifully in autumn. The annual kinds require the same treatment as those of the genus *Helianthus*; while the herbaceous kinds may be freely increased by dividing the roots. *Synonymes*: 1, *Acmella bupthalmoides*, *Bupthalmum scabrum*; 2, *B. helianthoides*.

HELIOTRÖPIUM, *Linn.* From *helios*, the sun, and *trope*, twining; the flowers are said to turn towards the sun. *Linn.* 3, Or. 1, Nat. Or. *Ehretiæ*. Some of the plants of this genus are highly valued for the fragrance of their flowers, and are therefore to be met with in

most gardens; they succeed freely in any rich light soil, and cuttings of the shrubby kinds, taken off when young, readily strike in the same kind of soil. The annuals and biennials require the same treatment as other hardy and tender annuals and biennials. *Synonymes*: 1, *H. grandiflorum*; 2, *H. chenopodioides*; 3, *Myosotis linifolia*; 4, *Tournefortia graphalodes*. See *Tiaridium*.

HENCKËLIA, Spreng. See *Didymocarpus*.

HÉNFRËYA, Lindley. Under the provisional name of *Dipteracanthus scándens*, the plant, on which the present genus is founded, was exhibited at a meeting of the Horticultural Society, in the spring of 1847. A full examination of its structure having shown that it formed a new and distinct genus, Dr. Lindley named it after the late Arthur Henfrey, a gentleman much distinguished for his sound acquaintance with botany, especially Vegetable Anatomy. The form of the stigma separates it decisively from both *Dipteracanthus* and *Strobilanthes*, to which it has, in other respects, much apparent affinity. The mode of culture is as follows:—After it has ceased to produce flowers in the spring, or beginning of summer, it should be divested of the old soil, and re-potted in fresh turfy peat and loam, in equal proportions, intermixed with a small portion of silver sand. The pot should be rather small in proportion to the size of the plant. Plunge it in bottom heat, where a humid glowing temperature, perfectly sweet, of seventy-five or eighty degrees, is kept up during night, and let it be partially shaded during bright sunlight. When roots have been plentifully produced, give it a final shift, using rough materials, as before described. A few round sticks will answer for its support, to which the shoots must be tied.

Synonymes: 1, *Asystasia scándens*, *A. quaterná*, *Ruellia quaterná*.

HENNA-PLANT. See *Lawsônia inermis*.

HEPATIC ALOES. See *Áloe vulgáris*, *purpuráscens*, *soccorína*, and *arboréscens*.

HEPÁTICA, Linn. From *hepatícos*, relating to the liver; the lobes of the leaves have been compared to the lobes of the liver. *Linn.* 13, Or. 6, Nat. Or. *Ranunculáceæ*. These are very pretty plants, and on account of their being abundant flowerers, and the flowers of much variety in shade and colour, they are all universal favourites in the flower-garden. They grow best in a light loam or peat soil, and increase readily by dividing the roots in spring. *Synonyme*: 1, *Anémone hepática*.

HERMANNIACEÆ. See *Byttneriaceæ*.**HERMAPHRODITE**, consisting of two sexes.

HÉRMAS, Linn. The meaning of the name is unknown. *Linn.* 23, Or. 1, Nat. Or. *Apiaceæ*. This is a genus of inconspicuous, stunted-looking plants, thriving well in peat, sand, and loam mixed. They may either be increased by seeds, or cuttings. *Synonyme: 1, H. depurperata.*

- ciliata* . . . Gr. yel. 5, G. Her. P. 2 C. G. H. 1816
gigantea . . . Green. 5, G. Her. P. 3 C. G. H. 1794
villosa 1 . . . Green. 5, G. Her. P. 2 C. G. H. 1795

HERMÁNÍUM, R. Brown. The meaning of the name is not explained. *Linn.* 20, Or. 1, Nat. Or. *Orchidaceæ*. The species of this genus are pretty, and grow freely in chalky soil, or in a mixture of loam, peat, and sand; they increase by divisions of the roots. *Synonymes: 1, Ophrys alpina, Chamorchis alpina; 2, Ophrys monorchis; 3, Habenaria cordata.*

- alpina 1* . . . White 5, F. Ter. $\frac{1}{2}$ Switzerl. 1824

monorchis 2 . . . Green 6, H. Ter. 1 Eng., chal. ba.

HERMONE, Salisbury. Named after Hermione, the daughter of Helen. *Linn.* 6, Or. 1, Nat. Or. *Amaryllidaceæ*. See also *Narcissus*.

aperticorona . . . Yel. or. 4 H. Bl. P. 1 Africa.

HERNÁNDA, Linn. In honour of Francisco Hernandez, M.D., a Spanish botanist. *Linn.* 21, Or. 3, Nat. Or. *Thymelacææ*. The species of this genus are elegant and lofty-growing trees, succeeding well in sandy loam and peat; and ripened cuttings, not divested of their leaves, will root readily in sand, under a glass. The juice of the leaves of *H. sonora* is a powerful depilatory; it destroys hair, without pain, wherever it is applied.

- guianensis* . . . Whit. gr. 6, S. Ev. T. 50 Guiana. 1820
ovigera . . . Whit. gr. 6, S. Ev. T. 50 E. Indies.
sonora . . . Whit. gr. 6, S. Ev. T. 50 E. Indies 1693

HERNÁNDIEÆ. See *Thymelacææ*.

HERNIÁRIA, Linn. From *hernia*, a rupture; because of its supposed effect in curing it. *Linn.* 5, Or. 2, Nat. Or. *Illecebracææ*. The species of this genus are not of very much

interest, and require only the simplest culture.

subtripplinèrvia 1 White 6, S. Ev. S. 3 Mexico . 1824
- HETEROPÁPPUS.** See *Aster*.
- HETEROPÓGON,** *Persoon*. From *heteros*, variable, and *pogon*, a beard. *Linn.* 21, Or. 3, Nat. Or. *Graminacæe*. Species of grass, not worth cultivating in any collection. *Synonymes*: 1, *gláber*; 2, *Andropogon contörtus*—*Alliönii* 1, contörtus 2.
- HETERÓPTERIS,** *H. B. and Kunth*. From *heteros*, variable, and *pteron*, a wing; the wings of the carpels are various in size and shape. *Linn.* 10, Or. 3, Nat. Or. *Malpighiacæe*. The plants of this genus are for the most part handsome climbers, thriving well in sand, peat, and loam; and cuttings of the ripened wood will root in sand, under a glass, in heat. *Synonymes*: 1, *Banisteria brachiata*; 2, *B. chryso-phýlla*; 3, *B. nitida*; 4, *B. purpúrea*.

- HETEROSPÉRMUM,** *Willdenow*. From *heteros*, various, and *sperma*, a seed; alluding to the variable size and shape of the seed. *Linn.* 19, Or. 4, Nat. Or. *Asteracæe*. An annual of little value; it requires to be raised on a gentle hot-bed, and afterwards transplanted into the flower-border.
pinnátum . Yellow 8, H. A. 2 New Spain . 1799
- HETEROSPHERIA,** *Greville*. From *heteros*, variable, and *sphaira*, a sphere. *Linn.* 24, Or. 9, Nat. Or. *Helvellacæe*. A black shining fungus, found growing on the stems of dead herbs—*patella*.
- HETEROTÁXIS.** See *Dicrýpta*.
- HETEROTHÈCA,** *De Candolle*. From *heteros*, variable, and *theca*, a spore-case. *Linn.* 19, Or. 5, Nat. Or. *Asteracæe*. *Synonyme*: 1, *Inula scábra*.
scábra 1 . . . Yellow 8, H. Her. P. 1 N. Amer.
- HETEROTRÍCUM,** *De Candolle*. From *heteros*, various, and *trich*, hair; plants clothed with hairs. *Linn.* 10, Or. 1, Nat. Or. *Melastomacæe*. For culture and propagation, see *Melastoma*. *Synonyme*: 1, *Melastoma nivea*.

- HEXAGLÓTTIS,** *Vent.* From *hex*, six, and *glotta*, a tongue. *Linn.* 16, Or. 1, Nat. Or. *Iridacæe*. *Synonyme*: *Mordea flexuosa*.
flexuosa 1 . . . Yellow 5, F. Bl. P. 1 C. G. H. . 1803
virgata . . . Yellow 5, F. Bl. P. 1 C. G. H. . 1825
- HEXÁGONAL,** six-sided.
- HEXÁNDRIA.** The sixth class of the Linnæan system of botany, comprising such plants as have six stamens; four orders belong to this class.
- HEXÁNDROUS,** having six stamens.
- HEXÁNGULAR,** six-angled.
- HEXÁPÉTALOUS,** having six petals.
- HEXÓPIA,** *Bateman*. From *hex*, six, and *ope*, a cell; alluding to the six pollen-masses in six cells. *Linn.* 20, Or. 1, Nat. Or. *Orchidacæe*.
crucigéra White . 5, S. Epi. ¾ Guatemala . 1836
- HEYLANDIA,** *De Candolle*. In honour of M. Heyland, an artist employed by *De Candolle*. *Linn.* 16, Or. 6, Nat. Or. *Fabacæe*. Stove shrubs, otherwise requiring the same treatment as *Hállia*. *Synonyme*: 1, *Hállia monophýlla*—hebecarpa 1, leiocarpa.
- HEYNEA,** *Roxburgh*. In honour of B. Heyne, M.D., a German botanist and traveller in India. *Linn.* 10, Or. 1, Nat. Or. *Meliacæe*. Ornamental-growing trees, about twenty feet high; they require to be grown in loam and peat, and ripened cuttings, with their leaves whole, will root in sand, under a glass, in heat.
quinquejúga . White . 9, S. Ev. T. 20 Java . 1816
trjúga . . . White . 9, S. Ev. T. 20 Nepal . 1812
- HIANS,** gaping, opening wide.
- HIBÉRTIA,** *Anderson*. In honour of George

Hibbert, F.R.S., L.S., once eminently distinguished for his love of plants; for a length of time he maintained Mr. Niven, a famous collector of plants, at the Cape. *Linn.* 13, Or. 3, Nat. Or. *Dilleniacæ*. All the species of *Hibbertia* are well worthy of a place in every collection of plants; they grow from one to three feet high, and succeed best in equal quantities of sandy loam and peat. Cuttings put in the same kind of soil, either in spring or summer, will root freely under a glass. *Synonymes*: 1, *Candollea Cunninghamii*; 2, *H. corifolia*.

HIBISCUS, *Linn.* Probably derived from *ibis*, a stork, because that bird is said to eat some of the species. *Linn.* 16, Or. 8, Nat. Or. *Malvaceæ*. All the kinds bear very showy flowers, and therefore deserve to be extensively cultivated. The shrubby, stove, and greenhouse species all require the same treatment, growing best in a mixture of loam and peat; and cuttings root readily in sand, under a glass, the stove kinds in heat. *H. syriacus* thrives well in any common garden soil, and is easily increased by layers, or seeds, while its varieties may be grafted one on the other, or they may be raised from cuttings planted under a hand-glass. The hardy herbaceous kinds are particularly showy; they are marsh plants, and require to be grown in a rather moist soil, with protection in winter. The hardy annuals merely require to be sown in the open ground. The tender biennials and annuals must be sown in pots, and treated as other tender annuals and biennials. The petals of *H. rosa sinensis* are astringent, and a few species, such as *H. sabdariffa* and *suratensis*, are slightly acid. *Synonymes*: 1, *H. palustris*; 2, *H. racemosus*; 3, *H. digitatus*; 4, *H. ficulneus*; 5, *H. grandiflorus*; 6, *H. aculeatus*; 7, *H. Meisneri*, *H. Pinonianus*, *H. geraniæfolius*. See *Fugosia*, *Pavonia*, and *Thespesia*.

HICKORY-TREE. See *Carya alba*.

HIEMALIS, pertaining to winter.

HIERACIUM, *Linn.* From *hierax*, a hawk; being supposed to sharpen the sight of birds of prey. *Linn.* 19, Or. 1, Nat. Or. *Asteraceae*.

An extensive genus of pretty flowering plants; the dwarf herbaceous kinds are remarkably adapted for rock-work, or the front of flower-borders, the taller kinds at the back; they may either be increased by seeds, or divisions.

H. fruticosum is readily increased by cuttings in mould, under a glass. The annual species need only be sown in the open border. *Synonymes*: 1, *H. verbasifolium*; 2, *H. auricula collinum*; 3, *H. sabaudum*; 4, *H. prenanthoides*; 5, *H. collinum*; 6, *H. collinum cymosum*; 7, *H. montanum*; 8, *Lepicaine prunellaefolia*; 9, *H. integrifolium*; 10, *Andryala lanata*. See *Ethonia*, *Borkhausia*, *Calliopa*, *Hapalostephium*, and *Leontodon*.

- HIGHLAND PINE.** See *Pinus Sylvêstris*.
- HILELGIE or HALEDSCH.** See *Balanites Egyptiaca*.
- HILLIA, Jacquin.** In honour of Sir John Hill, the author of many botanical works. Linn. 6, Or. 1, Nat. Or. Cinchonææ. These are ornamental species, of easy culture in a mixture of turfy loam, peat, and sand; and cuttings root readily in the same kind of soil, or sand, under a glass, in heat. Synonyme: 1, *H. parasitica*.
- longiflora 1 . White . 3, S. Ev. S. 1 1/2 W. Ind. 1789
 tetrandra . . White . 6, S. Ev. S. 1 Jamaica. 1793
- HILL-OAT.** See *Avena nuda*.
- HILUM,** the scar or mark in a seed, which indicates the place by which it adhered to the placenta.
- HIMANTIA.** See *Thelêphora*.
- HINDSIA, Bentham.** In compliment to R. B. Hinds, Esq., a zealous and indefatigable naturalist, whose plants, collected for his private use, have been published at the public expense. Linn. 5, Or. 1, Nat. Or. Cinchonææ. *H. violacea* is a most beautiful plant, and one of the finest obtained from South Brazil. It bears clusters of ultra-marine flowers two inches long. They are nearly allied to *Rondeletia*, and require similar treatment. Synonyme: 1, *Rondeletia longiflora*.

- HIPPJA, Linn.** From *hippos*, a horse; because horses were found of the original plant, Chickweed. Linn. 19, Or. 4, Nat. Or. Asterææ. Uninteresting plants, of the simplest culture — *frutescens, integrifolia*.
- HIPPION, Schmidt.** From *hippos*, a horse, and *ion*, a violet. Linn. 5, Or. 1, Nat. Or. Gentianææ. Pretty little plants, requiring to be treated the same as other tender biennials. Synonymes: 1, *Evacum hyssopifolium*; 2, *E. verticillatum*; 3, *E. viscosum*.
- hyssopifolium 1 Fulvous 7, S. B. 1 E. Ind. 1825
 verticillatum 2 White 7, S. B. 1 Trinidad. 1817
 viscosum 3 . . Yellow 6, G. B. 2 Canaries. 1781
- HIPPOBRÔMA, G. Don.** From *hippos*, a horse, and *bromos*, poison; fatal to horses. Linn. 5, Or. 1, Nat. Or. Lobeliææ. Very poisonous plants; if handled, and the hands applied to the eyes, a burning sensation is produced. They grow in a mixture of heath-mould, loam, and sand, and increase by cuttings planted in sand. Synonyme: 1, *Lobelia longiflora*.
- breviflorum . White 7, S. Her. P. 1 S. Amer. .
 longiflorum 1 . White 5, S. Her. P. 1 W. Indies. 1752
- HIPPOCASTANEE.** See *Sapindææ*.
- HIPPOCRATEA, Linn.** In honour of Hippocrates, who is regarded as one of the fathers of botany. Linn. 3, Or. 1, Nat. Or. Hippocrateææ. A genus of mostly climbing shrubs, with very minute flowers; the plants are only worth cultivating in collections. Loam and peat suits them well, and cuttings root readily in sand, under a glass, in heat. Synonymes: 1, *scandens*; 2, *volubilis*.

- HIPPOCRATEÆÆ, or HIPPOCRATEADS.** A small order, consisting of arborescent or climbing shrubs, with small and inconspicuous flowers. Some have eatable fruits, especially *Tonsella pyriformis* and several species of *Tontleæa*.
- HIPPOCRÉPIS, Linn.** From *hippos*, a horse, and *crepis*, a shoe; alluding to the appearance of the curved recesses of the pods. Linn. 17, Or. 4, Nat. Or. Fabæææ. The plants of this genus are all remarkably neat and beautiful, and highly deserving a place in every garden. *H. baleàrica* thrives well in loam and peat,

and cuttings root readily in sand, under a glass. The herbaceous kinds grow well in any light sandy soil, and look well when planted on a bank, or rock-work. The seeds of the annual kinds should be sown early in spring, in the open border. *Synonyme*: 1, *comôsa*.

HIPPOMANE, *Linn.* From *hippos*, a horse, and *mane*, madness; alluding to the effects of the original plant. *Linn.* 21, Or. 10, Nat. Or. *Euphorbiaceæ*. *H. Mancinella* grows to an immense size in its native country, and abounds in a white milky juice, which is highly poisonous, therefore, it is very necessary, in cutting the plant, not to let the juice touch the skin, as a single drop would be sufficient to make the hands swell and itch very much. A mixture of sandy loam and peat suits both the species, and cuttings root readily in sand, under a glass, in heat. *Synonymes*: 1, *Sapium ilicifolium*, *Colebogyne ilicifolia*.

Mancinella . .	Green . 5, S. Ev. T. 60	W. Ind. . .	1690
spinosa 1 . .	Green . 5, S. Ev. S. 20	W. Ind. . .	1820

HIPPOMARATHRUM, *Linn.* From *hippos*, a horse, and *marathron*, fennel. *Linn.* 5, Or. 2, Nat. Or. *Apiaceæ*. A curious species, of very easy culture and propagation. See also *Séseli Hippomarathrum*.

sticulum . . .	Yellow . 7, H. Her. P. 3	Sicily . . .	1640
----------------	--------------------------	--------------	------

HIPPOPHAE, *Linn.* From *hippos*, a horse, and *phao*, to destroy; in reference to the supposed poisonous qualities of the seeds. *Linn.* 22, Or. 4, Nat. Or. *Elæagnaceæ*. Ornamental trees, growing in any common soil, and may be readily increased by layers, or cuttings of the roots. See *Shepherdia*.

villôsa . . .	Pink . 4, S. Ev. S. 6	E. Indies . .	1820
---------------	-----------------------	---------------	------

HOLBËLLIA, *Wallich*. This genus was named by Dr. Wallich after Mr. Frederick Louis Holbôll, Superintendent of the Royal Botanic Gardens at Copenhagen; an experienced bo-

tanist. *Linn.* 21, Or. 6, Nat. Or. *Lardizabalaceæ*. These are plants of interest (notwithstanding the greenness of their flowers); they exhale a very pleasant fragrance, and are of easy culture, merely requiring to be planted in light soil, and to be treated like other greenhouse or half-hardy climbers. *Synonymy*: 1, *Stauntonia latifolia*.

acuminata . . Gn. yl. 3, G. Ev. Tw. 10 N. Ind. 1846
angustifolia . Purple 3, G. Ev. Tw. 12 Nepal 1846
latifolia 1 . . Green. 3, G. Ev. Tw. 20 Nepal 1845

HÓLCUS, *Linn.* From *helko*, to extract; the original plant was supposed to possess the power of extracting thorns. *Linn.* 23, Or. 1, Nat. Or. *Graminææ*. A genus of grasses, which delights to grow in light loamy soil; increased by seeds or divisions, *Synonymy*: 1, *Andropogon saccharatus*. See *Arrhenatherum*, *Chrysopogon*, *Hierbchoe*, and *Sorghum*.

lanatus . . . Apetal 6, H. Grass. 2½ Brit., past. mollis . . . Apetal 7, H. Grass. 2 Brit., co. fe. saccharatus 1. Apetal 6, G. Grass. 3 China . .

HOLGÁRNA, *Roeburgh*. The name of the tree in the language of Karnata. *Linn.* 23, Or. 1, Nat. Or. *Anacardiææ*. This species is a very tall-growing tree; for culture and propagation, see *Anacardium*.

longifolia . White . 4, S. Ev. T. 60 E. Ind. . . 1828

HOLLY. See *Ilex*.

HOLLYHOCK. See *Althæa rosea*.

HOLLY-OAK. See *Quercus Ilex*.

HOLMSKIÓLDIA, *Retz*. In honour of Theodore Holmskiöld, a Danish botanical author. *Linn.* 14, Or. 2, Nat. Or. *Lamiææ*. Rather curious and interesting plants, succeeding well in an equal mixture of loam, peat, and sand; and cuttings of the young wood root freely in the same kind of soil, under a glass, in heat. *Synonymy*: 1, *Hastingsia coccinea*; 2, *H. scândens*.

sanguinea 1 . Scarlet . 5, S. Ev. S. 4 E. Ind. 1796
scândens 2 . Scarlet . 5, S. Ev. Cl 6 E. Ind. 1824

HOLÓGYMNE. From *holos*, all, and *gymnos*, naked. *Linn.* 19, Or. 2, Nat. Or. *Asterææ*. For culture, see *Lasthènia*. *Synonymy*: *Lasthènia glabrata*.

glabrata . Yellow . 6, H. A. 1½ California 1833

HOLÓPHÝLLUM, *De Candolle*. From *holos*, all, and *phyllon*, a leaf. *Linn.* 19, Or. 2, Nat. Or. *Asterææ*. For culture, see *Athamàsia*. *Synonymy*: 1, *Athamàsia capitata*.

capitatum 1 . . Yellow 1, G. Ev. S. 1½ C. G. H. 1774
lanuginosum . Yellow 5, G. Ev. S. 1½ C. G. H. 1822

HOLOSCHÆNUS. See *Isòlepis Holoschænus*.

HOLOSÉRICEA, silky, pubescent.

HOLÓSTEA. See *Stellària Holóstea*.

HOLÓSTEUM, *Linn.* From *holos*, all, and *osteon*, a bone; applied by antiphrasis to this plant, which is soft and delicate. *Linn.* 3, Or. 3, Nat. Or. *Caryophyllææ*. These species merely require to be sown in the open ground. See *Drymària*.

spergulioides . White 7, H. A. ½ Egypt 1829
umbellatum . Pink . 7, H. A. ½ Eng., wastes.
diandrum.

HOLY CYAMUS. See *Nelámbium speciosum*.

HOLY ROSE, or **ROSE OF JERICHO**. See *Anastática hierochuntina*.

HOMALÁNTHUS, *Barth.* From *homalos*, regular, and *anthos*, a flower. *Linn.* 21, Or. 8, Nat. Or. *Euphorbiææ*. For cultivation, see the stove species of *Euphòrbia*.

populifolius . White . 6, S. Ev. S. 1½ N. Holl. 1824

HOMALIÁCÆE, or **HOMALIADS**. Tropical trees and shrubs, not far removed from Passion-flowers; the flowers, however, are borne in spikes or racemes.

HOMALINEÆ. See *Homaliææ*.

HOMALÍUM, *Jacquin*. From *homalos*, regular; the stamens are regularly divided into three-stamened fascicles. *Linn.* 18, Or. 4, Nat. Or. *Homaliææ*. The flower of this species is rather insignificant. The plant grows in a mixture of loam and peat; and cuttings, nearly ripened, root readily in sand, under a glass, in heat.

racemosum . White . 6, S. Ev. T. 6 W. Ind. 1816

HOMALONEMA. From *homalos*, regular, and *nema*, a filament. *Linn.* 21, Or. 7, Nat. Or. *Aracææ*. For culture, see *Richàrdia*. *Synonymy*: 1, *Cállia aromática*, *C. occellata*.

aromática 1 . White . 7, G. Her. P. 2 China 1813
cordata . . . White . 6, G. Her. P. 2 China 1820

HOMÈRIA, *Ventenat*. Named after the distinguished father of epic poetry, Homer. *Linn.* 16, Or. 1, Nat. Or. *Iridææ*. This is a beautiful genus of bulbous plants; they delight to grow in an equal mixture of loam, peat, and sand. When they are in a dormant state, they should be kept free from moisture; but when growing, they should be plentifully supplied with water. They are increased by offsets from the bulbs, or by seeds. *Synonymy*: 1, *Moræa collina*; 2, *élegans*; 3, *collina exalidata*; 4, *collina miniata minor*; 5, *flexuosa*; 6, *spicata*; 7, *virgata*.

collina 1 . . Pur. . 5, G. Bl. P. 1½ C. G. H. 1768

HOMER'S MOLY. See *Allium mágicum*.

HOMOGENEOUS, having a uniform nature, principle, or composition.

HOMÓGYNE, *De Candolle*. From *homos*, uniform, and *gyne*, a female. *Linn.* 19, Or. 2, Nat. Or. *Asterææ*. See *Tussilágo*.

HOMOLÁNTHUS, *Bonpland*. From *homos*, uniform, and *anthos*, a flower. *Linn.* 19, Or. 2, Nat. Or. *Asterææ*. A small genus of herbaceous plants, thriving in a mixture of loam and peat, and increased by division.

viscosus . Pur. blue 6, G. Her. P. 1½ Chile . . 1862

HONESTY. See *Lunària*.

HONEY-BERRY. See *Melicócca*.

HONEY-FLOWER. See *Meliándrum*.

HONEY-GARLIC. *Nectaroscòrdrum*.

HONEY-LOCUST TREE. See *Gleditschia triacanthos*.

HONEY-LOTUS. See *Melilotus officinalis*.

HONEY-PORE, the pore in flowers which secretes honey.

HONEY SCALES, the scales in flowers which secrete honey.

HONEY-SPOTS, the spots in flowers which secrete honey.

HONEY-SUCKLE. See *Lonicera*.

HONEY-WARE, or BLADDER-LOCKS. See *Orygia*.

HONEYWORT. See *Cerinth*.

HONEYWORT. See *Sison*.

HONGHEL BUSH. See *Adonium Honghel*.

HOODED, being curved or hollowed at the end into the form of a hood.

HOODED MILFOIL. See *Utricularia*.

HOODIA, Sweet. Linn. 5, Or. 2, Nat. Or. *Asclepiadaceæ*. See *Stapelia*.

HOOKERIA, Smith. In honour of the late Sir William Jackson Hooker, LL.D, F.R.S., &c., Director of the Royal Botanic Gardens at Kew, near London, and one of the most distinguished of modern botanists. Linn. 24, Or. 5, Nat. Or. *Bryaceæ*. This is described as a very beautiful genus of mosses, resembling *Hypnum*. One of the species, *H. late-virens*, has only been discovered as yet in a bog near Cork—*late-virens, lucens*. See *Brodiaea*.

HOOLAS-KASMEEREE. See *Rhododendron campanulatum*.

HOOP-ASH. See *Oeltis crassifolia*.

HOOP-PETTICOAT. See *Narcissus bulbocodium*.

HOOP-WITHY. See *Rivina octandra*.

HOP. See *Humulus*.

HOPEA. See *Symplocos*.

HOP-HORNBEEAM. See *Ostrya*.

HOPKIRKIA. See *Salmea*.

HOP-LIKE TREFOIL. See *Medicago lupulina*.

HOP-MEDICK. See *Medicago lupulina*.

HOP-POLES are made of the sweet chestnut tree (*Castanea vesca*).

HOP TREFOIL. See *Medicago lupulina*.

HORDEUM, Linn. According to Bodæus, the name is derived from *hordeus*, heavy; because bread made with barley is very heavy. Linn. 3, Or. 2, Nat. Or. *Graminaceæ*. The species of this genus are among the most useful plants we possess; *H. distichon*, *hexastichon, vulgare*, and *Zecriton*, with their varieties, are the kinds cultivated for domestic purposes. The seeds only require sowing in the open ground. *Synonyme*: 1, *H. himalayense, egerias*.

- HUMBLE-PLANT**. See *Mimúsa pudica*.
- HÚMEA**, *Smith.* In honour of the Lady of the late Sir Abraham Hume, Bart., of Wormleybury, Herts. *Linn.* 19, Or. 1, Nat. Or. *Asteráceæ*. An elegant species, flowering well in a warm situation in the open border; it requires to be raised on a gentle hotbed, and when of sufficient size, potted off, and treated as a greenhouse plant till the second year, when it may be turned out into the open border, where it will grow and flower much better than if confined in pots.
- élegans . . Red . 7, G. B. 6 N. S. W. . . 1800

- HUMIFŪSUS**, prostrate, diffuse.
- HŪMILIS**, humble, small, low.
- HUMIRIÁCEÆ**, or **HUMIRIÁDS**. An order of trees and shrubs with balsamic juices. All are natives of the tropics. *H. floribándum* yields the balsam of Umiri; this and some other products of this order are used extensively in medicine.
- HŪMULUS**, *Linn.* From *humus*, the ground; the plant, if not supported, creeps along the ground. *Linn.* 22, Or. 5, Nat. Or. *Cannabi-náceæ*. This is the well-known Hop, which is so extensively cultivated in some parts of England. It looks well grown as a temporary arbour in summer, as its leaves are very large, and make a fine shade; deep loamy soil suits it best, and it may be increased by divisions or seeds.
- lápulus . . Yellow 7, H. Her. Cl. 20 Brit., hedges, variegáta . Yellow 7, H. De. Tw. 20 Brit., gard.

HYDRANGEIDÆÆ, or **HYDRANGEADS**. Small shrubs, several of them well known as ornaments in our gardens; they are nearly related to saxifragas, and all deserve cultivation.

HYDRASTIS, *Linn.* From *hydor*, water; plants growing in humid places. *Linn.* 14, Or. 1, Nat. Or. *Ranunculidææ*. An ornamental species, succeeding well in a moist situation, in loam and peat, and increased by tubers of the roots.

canadensis	. . . Green	. 5, H. Her. P.	↓ N. Amer.	. 1759
------------	-------------	-----------------	------------	--------

HYDRÓCERA. From *hydor*, water, and *keras*, a horn. *Linn.* 5, Or. 1, Nat. Or. *Balsaminidææ*. See *Tytonia*.

HYDRÓCHARIDÆÆ, or **HYDROCHARADS**. These are all water plants, found in various parts of the world; all are curious and deserve attention.

HYDRÓCHARIS, *Linn.* From *hydor* water, and *charis*, grace; a pretty aquatic. *Linn.* 22, Or. 3, Nat. Or. *Hydrocharidææ*. This little plant is one of the prettiest ornaments of our still waters; it looks very pretty grown in a tub or cistern of water, and is readily increased by seeds or runners, which root at the joints.

morsus-rânæ	White	. 6, H. Aq. P.	↓ Brit.	ditches.
-------------	-------	----------------	---------	----------

HYDRÓCHLOA, *Link.* From *hydor*, water, and *chloa*, grass; aquatic grass. *Linn.* 3, Or. 2, Nat. Or. *Graminidææ*. Mere weeds, of the simplest culture. *Synonymes*: 1, *Poa aquatica*, *Glycèria aquatica*; 2, *P. arundinæa*; 3, *P. distans*; 4, *P. maritima*, *Glycèria maritima*—*aquatica* 1, *arundinæa* 2, *distans* 3, *maritima* 4.

HYDRÓCYTLE, *Tournefort*. From *hydor*, water, and *cotyle*, a cavity; in reference to the plants growing in moist situations, and the leaves being hollowed like cups. *Linn.* 5, Or. 2, Nat. Or. *Apiidææ*. Uninteresting plants, growing in peat soil in wet situations; in-

- creased by divisions. *Synonyme*: 1, *H. hirsuta*.
- spicâta 1. . Green . 7, S. Her. P. 2 India . 1810
- americâna, asiâtica, bonariensis, nepalensis, nûtans, peduncularis, plebèia, prolifera, ranunculoides, repânda, sibthorpioides, trilôba, umbellâta, villôsa, vulgaris.
- HYDRODICTYON**, *Kunth*. From *hydor*, water, and *dictyon*, a net; reticulate structure of the plants. *Linn.* 24, Or. 7, Nat. Or. *Conservaceæ*. A curious aquatic production, resembling a net—*utriculatum*.
- HYDROGLÓSSUM**. See *Lygódium*.
- HYDROLÁPATHUM**. See *Rumex Hydrolápathum*.
- HYDRÔLEA**, *Linn.* From *hydor*, water, and *elaia*, oil; alluding to the situation and oily nature of the plant. *Linn.* 5, Or. 2, Nat. Or. *Hydroleaceæ*. Rather handsome plants when in flower, succeeding well in loam and peat; and cuttings will root in sand, under a glass, in heat. *Synonyme*: 1, *caroliniana*.

- HYDROMÉSTUS**, *Scheidw.* From *hydor*, water, and *mesos*, half. *Linn.* 14, Or. 2, Nat. Or. *Acanthaceæ*. A small Mexican bush, with flowers like *Justicia*. For culture, &c., see *Justicia*.
- maculâta . Yellow . 5, S. Ev. S. 1 Mexico . 1842
- HYDRÔPÉLIS**, *Michaux.* From *hydor*, water, and *pelle*, a buckler; the plant grows in water, and the leaves are like a buckler. *Linn.* 13, Or. 6, Nat. Or. *Nymphaeaceæ*. This very pretty plant is seldom to be met with in our gardens, it being very difficult to grow; it requires to be kept in a cistern or pond of water, and may be increased by offsets. *Synonyme*: 1, *Brasènia peltata*.
- purpurea 1 . Red . . 7, F. Aq. P. 2 N. Amer. 1798
- HYDRÔPHORA**, *Tode.* Derived from *hydor*, water, and *phoros*, to bear; in allusion to the water peridiolum. *Linn.* 24, Or. 9, Nat. Or. *Mucoraceæ*. Found on rats' dung—*murina*. See *Mucor*.
- HYDROPHYLLACEÆ**, or **HYDROPHYLs**. Trees and herbaceous plants, principally found in America. Some are cultivated in our gardens for the sake of their gay flowers.
- HYDROPHÝLLUM**, *Linn.* From *hydor*, water, and *phyllon*, a leaf. *Linn.* 5, Or. 1, Nat. Or. *Hydrophyllaceæ*. Dwarf, neat-foliaged plants, inhabiting the marshes of North America; any rich soil suits them in a moist situation; and they may be increased by suckers. *Synonyme*: 1, *Nemôphila paniculata*. See *Nemôphila* and *Phacèlva*.

- HYDRÓPIPER**. See *Elatine Hydrópiper* and *Polígoum Hydrópiper*.
- HYDRÓPYRUM**, *Link.* From *hydor*, water, and *pyren*, a kernel; seeds fit for food. *Linn.* 21, Or. 6, Nat. Or. *Graminaceæ*. See *Zizânia*.
- HYDROTÆNIA**, *Lindley.* The petals have a triangular glandular bar at their base, which points upwards and secretes honey; whence the name. *Linn.* 3, Or. 1, Nat. Or. *Iridaceæ*. A curious genus, found in mountain pastures, near the Real del Monte mines in Mexico. The plant looks like a *Tigrídia*, and bears flowers resembling *Fritillaria pyrenaica*, only smaller. For culture, &c., see *Tigrídia*. *Synonyme*: 1, *Tigrídia lutea*.
- lobâta 1. . . Yel. pur. . 5, G. Bl. P. 1 1/2 Lima . 1843
Meleagrís . Yel. pur. . 7, H. Bl. P. 1 1/2 Mexico 1837
- HYGRÓCROCIS**, *Agardh.* From *hygros*, moist, and *crokis*, a little tuft. *Linn.* 24, Or. 7, Nat. Or. *Conservaceæ*. These plants are only found in chemical solutions of vegetable matter, such as ink, rose water, &c.—*atramenti*, *burgitica*, *pallida*, *Rdsæ*, *sanguinea*, *typhlodërma*, *vinii*.
- HYGROMETRICAL**, indicating the presence of moisture.
- HYGRÓPHILA**, *R. Brown.* From *hygros*, moist, and *phileo*, to love; alluding to the habitat of the plant. *Linn.* 14, Or. 2, Nat. Or. *Acanthaceæ*. A pretty genus, growing freely in a rich light soil; and young cuttings root freely in the same kind of soil, under a glass, in heat. *Synonymes*: 1, *Ruellia longifolia*; 2, *R. obovata*; 3, *R. ringens*; 4, *R. salicifolia*. See *Marchántia*.

scabiosösus . . . White . 8, H. A. 1½ Carolina 1816
tenuifolius.

HYMENOPHYLLUM, *Smith*. From *hymen*, a membrane, and *phyllon*, a leaf; alluding to the leaves. *Linn.* 24, Or. 1, Nat. Or. *Polyodiaceæ*. The species of this genus rank among the most elegant of Ferns, and do best when grown in small pots, in a mixture of loam and peat, and increase freely by seed, or dividing the roots. *Synonyme*: 1 *Leptocionium sorörarium*. See *Trichömanes*.

HYMENOPYRAMIS, *Wallich*. From *hymen*, a membrane, and *pyramis*, a pyramid; alluding to its substance and growth. *Linn.* 5, Or. 1, Nat. Or. *Verbänceæ*. A mixture of loam, leaf-mould, and sand will suit this plant, and it may be increased by cuttings.
brachiata . . . White . 8, S. De. S. 2 E. Ind. . 1832

HYMENOSTOMUM, *R. Brown*. From *hymen*, a membrane, and *stoma*, a mouth, on account of having a membrane stretched across the orifice of the theca. A genus of minute mosses, with the habit of *Gymnostomum*. *Linn.* 24, Or. 5, Nat. Or. *Bryaceæ*. *Synonyme*: 1, *Gymnostomum microstomum*—*microstomum* 1.

HYMENÖXYS, *Cass*. From *hymen*, a membrane, and *oxys*, sharp; in allusion to the scales of the pappus. *Linn.* 19, Or. 2, Nat. Or. *Asteraceæ*. A pretty little hardy annual, thriving in any garden soil, and easily raised from seeds.
californica . . . Yellow . 6, H. A. 1 California 1838

HYOPHÖRBE. See *Arëca*.

HYOSCÄMUS. See *Physochläina*.

HYOSCÄMUS, *Linn*. From *hyos*, a hog, and *kyamos*, a bean; the fruit is eaten by swine. *Linn.* 5, Or. 1, Nat. Or. *Solanaceæ*. The species of *Henbane* are all of the easiest culture. The shrubby and herbaceous kinds are well adapted for planting on rock-work during summer, but in winter they require the protection of glass; and are increased by cuttings or seeds. The annual and biennial kinds merely require sowing in the open ground. *Henbane* has been long used as a medicine. *Synonyme*: 1, *H. niger annuus*. See *Scopölia* and *Physochläina*.

HYPÉLATE. See *Melicocca*.

HYPÉRANTHÉRA, *Vahl.* See *Moringa*.

HYPERBŒREUS, northern.

HYPERCATHARTIC, a medicine that produces too powerful effects as a purgative.

HYPERICACEÆ, or Tutsans and St. John's Worts.

The plants of this order are generally spread over the whole world; they consist of trees, shrubs, herbaceous plants, and annuals; all have a resinous juice, which exudes on the plants being injured.

HYPÉRICUM, *Linn.* The name is said to be derived from *uper* and *eicon*, an imago; the superior part of the flower represents a figure. *Linn.* 18, Or. 2, Nat. Or. *Hypericaceæ*. The most part of the species of this extensive genus are showy plants. The greenhouse and frame shrubby kinds do well in loam and peat, and young cuttings root freely in sand, under a glass. The hardy shrubs are well fitted for the front of shrubberies, being dwarf and showy, and growing in any soil, and increased by divisions or seeds, as well as the herbaceous kinds, which thrive well in any common soil. The seeds of the annual species have only to be sown in the open ground in spring. *Synonymes*: 1, *H. monogynum*; 2, *delphinense*; 3, *Kohliana*; 4, *nervosum*; 5, *aspalathoides*; 6, *Elodea campanulata*. See *Androsætemum*, *Reaumurea*, and *Vismea*.

HYPOCALÝMMA, *Endl.* From *hypo*, under, and *kalymma*, a veil; the bracts hiding the calyx from below. *Linn.* 12, Or. 1, Nat. Or. *Myrtaceæ*. A beautiful little greenhouse genus, with peach-coloured flowers resembling the common *Myrtle*. A compost of loam, heath-mould, and silver-sand will suit them; the pots must be well drained, plenty of water may be given in summer, and abundance of air at all times. They may be propagated by cuttings planted in sand under a hand-glass.

HYPOXIDACEÆ, or HYPOXIDS. A small order, consisting of herbaceous plants, nearly related to Amaryllids, but less showy in their flowers, and without bulbs.

HÝPTIS, Jacquin. From *hyptios*, resupinate; because the limb of the corolla is turned on its back. *Linn.* 14, Or. 1, Nat. Or. *Lamiaceæ*. Plants of little merit. The shrubby and herbaceous kinds should be treated as other stove and greenhouse plants, and are readily increased by cuttings. The annuals and biennials require the same treatment as other hardy and tender annuals and biennials. *Synonymes*: 1, *H. persica*, *Nepeta pectinata*; 2, *H. ebracteata*, *H. Plumieri*.

HYSSOP HEDGE. See *Gratiola officinalis*.
HYSSOP OF ANCIENTS is most likely the *Capparis hyssopifera*.

HYSSOP OF SOLOMON is supposed by Haselquist to be a minute moss, the *Gymnostomum truncatulum*—but others have thought it to be the *Capparis aegyptiaca*.

HYSSOP. See *Hyssopus*.

HYSSOPUS, Linn. The derivation of this word is rather uncertain. By some it is said to be from the Hebrew, *ezob*; others assert it to be from the Arabic, *azof*. *Linn.* 14, Or. 1, Nat. Or. *Lamiaceæ*. The cultivation of this genus is well known to everybody. *Synonymes*: 1, *H. orientalis*; 2, *H. Schleicheri*. See *Eisholtzia*, *Lophanthus*, and *Stachys*.

HYSTERIUM, Fries. From *hysteresis*, penury; alluding to its appearance on infested trees. *Linn.* 24, Or. 9, Nat. Or. *Helvellaceæ*. Minute plants, found growing upon the bark of trees, &c.—*angustatum*, *arundinaceum*, *conigenum*, *degenerans*, *foliocolum*, *Fraxini*, *gramineum*, *Juniperi*, *lineare*, *maculare*, *melaleucum*, *Pinastri*, *pubicære*, *quercinum*, *Rubi*, *Vaccinii*, *vàrium*.

HYSTEROPHORUS. See *Parthenium Hysterophorus*.

HÝSTRIX, bristly, like a porcupine.

HÝSTRIX. See *Chetaria Hystrix* and *Hordeum Hystrix*.

I.

IBBETSONIA. See *Cyclophia*.

IBÉRIS, Linn. From the country called Iberia, now Spain; on account of the original species being found there. *Linn.* 15, Nat. Or. *Brassicaceæ*. The species of this genus are all very pretty plants of easy culture, and well known in our gardens under the name of Candytuft. *I. umbellata* is a great favourite, and generally found in every flower-garden collection. *Synonymes*: 1, *cepefolia*. See *Hutchinsia* and *Teesdalia*.

ICOSÁNDRIA. Class twelve of the Linnæan system of botany; from *eicosi*, twenty, and *aner*, a man. The plants belonging to this class have as many as twenty stamens.

ICOSÁNDROUS, having twenty or more stamens.

IDÆUS. See *Rubus Idæus*.

ILEX, Linn. Name originally from the Celtic, *oc*, or *ac*, signifying a point; on account of the prickly leaves. *Linn.* 4, Or. 3, Nat. Or., *Aquifoliaceæ*. A genus of trees and shrubs well known for their elegant character, evergreen prickly foliage, and their adaptation to lawns. Many varieties have resulted from culture, which are distinguished by the variegation and size of the leaves, and the colour of the fruit. They grow well in any soil, but best in a dryish situation, where there is a good depth of loam. They are increased by budding or grafting on the common kinds; but cuttings of the ripened wood will root under a glass, in a sheltered situation. *I. paraguensis* is used as tea, and yields the famous beverage called Maté in Brazil. *Synonymes*: 1, *Ilex náta*; 2, *I. dipyræna*, *Dentoni*. See *Myrtina* and *Prinos*, also *Berberis*.

ILEX. See *Quercus Ilex*.

ILLECEBRÆÆ, or **KNOTWORKS.** An order very near *Amaranth* and *Cloves*. The greater part are herbaceous plants or half-shrubby species, and none are remarkable for beauty.

ILLECEBRUM, Linn. From *Illecebra* of Pliny, which is derived from *illicio*, to allure; pretty enticing plants. *Linn.* 5, Or. 1, Nat. Or. *Illecebrææ*. Interesting dwarf plants. *I. verticillatum* is found in England in boggy places, and is very pretty. They grow in any soil, and increase from seed without difficulty. *Synonyme*: 1, *Paronychia cymosa*. See *Lahaya*, *Paronychia*, and *Philæceris*.

ILLÍCIUM, Linn. From *illicio*, to allure; because of the agreeable perfume of the species. *Linn.* 13, Or. 6, Nat. Or. *Magnoliææ*. The species of this useful genus thrive well in a light loamy soil, and are readily increased by layers. Cuttings of the ripened wood root readily in sand, under a glass, in heat. *I. anisatum* and *I. floridanum* are considered powerful stomachics and carminatives. *Synonyme*: 1, *anisatum*.

anisatum . . .	Red . . . 5, F. Ev. S. 6	Japan	1799

ILLOSPORIUM, Martius. From *illo*, to envelop, and *sporos*, a spore. *Linn.* 24, Or. 9, Nat. Or. *Botryllææ*. A very small rose-coloured fungus, appearing in autumn on *Borrera ciliaris*, and some others—*roseum*.

ILLUPE TREE. See *Bassia longifolia*.

ILLUS. See *Narcissus*.

IMATOPHYLLUM. See *Olivia*.

IMBÉRBIS, smooth, without a beard.

IMBRICARIA, Commerson. From *imbrico*, to cover with tiles; wood used to roof houses. *Linn.* 8, Or. 1, Nat. Or. *Sapotææ*.

borbónica . . .	White . . .	S. Ev. S. 10	Bourbon . . .	1820
-----------------	-------------	--------------	---------------	------

IMBRICATE, laid one over another, like tiles.

IMHŌFIA. See *Strumaria*.

IMMÁRGINATE, without a margin.

IMMERSED, buried; applied to the leaves of aquatics when they grow under the water, and to the ovary when buried in the disk.

IMPÁTIENS, Rivinus. From *impatiens*, impatient; applied to this genus because the elastic valves of the capsules burst when touched, and throw the seed out with great force. *Linn.* 5, Or. 1, Nat. Or. *Balsaminææ*. This is a genus of very beautiful and singular plants,

all deserving a place in every collection. *I. nitans* should be grown in a large pot of water, in rich loamy soil, in a warm part of the stove, and increased by seeds sown in spring. *I. scapiflora* thrives well in a light rich soil, with careful watering in winter. The frame species should be sown on a gentle hotbed in spring, and when about two inches high, they may be planted out into the open border. The seeds of the hardy kinds should be sown in the open border in a shady situation. *Synonymes*: 1, *biflora*; 2, *setacea*, *heterophylla*; 3, *biglandulosa*; 4, *bulbosa*, *acaulis*; 5, *platypétala*. See *Balsamina*.

INDIGENOUS, native of a country.
INDIGO. See *Indigófera tinctorium* and *Poligonum tinctorium*.

INDIGÓFERA, *Linn.* From *indigo*, a blue dye-stuff; a corruption of *indicum*, Indian, and *fero*, to bear; most of the species produce the well known dye called Indigo. *Linn.* 17, Or. 4, Nat. Or. *Fabacæa*. An extensive genus of rather elegant plants, the shrubby kinds of which are well worthy of cultivation. The stove and greenhouse shrubby kinds thrive best in a mixture of sandy loam and peat, and may be increased without difficulty by cuttings of the young wood planted in sand, under a glass, in heat. The annual and biennial kinds must be raised from seeds sown in a hotbed in spring, and when the plants have grown a sufficient height, they may be planted singly into pots, and treated as other tender annuals and biennials. The powdered leaf of *I. Anil* is used in hepatitis. *Indigo* is produced from various species of this genus, especially from *I. tinctoria*. *Synonymes*: 1, *I. tinctoria*, *brachycarpa*; 2, *I. filifolia*; 3, *I. hirsuta*; 4, *Lebeckia nuda*; 5, *I. angulata*; 6, *I. œrula*.
